

Risk Factors Comparison 2024-02-29 to 2023-03-02 Form: 10-K

Legend: **New Text** ~~Removed Text~~ Unchanged Text **Moved Text Section**

In addition to the other information in this Annual Report on Form 10-K and our other filings with the SEC, the following risk factors should be carefully considered in evaluating us and our business before investing in our common stock. The risks and uncertainties described below are not the only ones facing us. Additional risks and uncertainties, not presently known to us or otherwise, may also impair the Company's business. Although the risks are organized by headings, and each risk is discussed separately, many are interrelated. If any of the risks actually occur, our business, financial condition or results of operations could be materially and adversely affected.

Risks Relating to Our Investments Our portfolio companies may experience financial distress and our investments in such companies may be restructured. Our portfolio companies may experience financial distress from time to time. Debt investments in such companies may cease to be income-producing, may require us to bear certain expenses to protect our investment and may subject us to uncertainty as to when, in what manner and for what value such distressed debt will eventually be satisfied, including through liquidation, reorganization or bankruptcy. Any restructuring can fundamentally alter the nature of the related investment, and restructurings may not be subject to the same underwriting standards that GECM employs in connection with the origination of an investment. In addition, we may write-down the value of our investment in any such company to reflect the status of financial distress and future prospects of the business. **Any restructuring could alter, reduce or delay the payment of interest or principal on any investment, which could delay the timing and reduce the amount of payments made to us. For example, if an exchange offer is made or plan subject to a number of risks and uncertainties, including reorganization is adopted with respect to those-- the debt securities we currently hold, highlighted and discussed in greater detail in the section titled "Risk Factors" following this summary. Some of these there can principal risks may be further exacerbated no assurance that the securities or other assets received by us in connection with such exchange offer or plan of reorganization will have a value or income potential similar to what we anticipated when our original investment was made or even at the time of restructuring. Restructurings of investments might also result in extensions of the term thereof, which could delay the timing of payments made to us, or we may receive equity securities, which may require significantly more of our management's time and attention or carry restrictions on the their disposition.**

~~novel coronavirus ("COVID-19") pandemic: - We face increasing competition for investment opportunities. Limited availability of attractive investment opportunities in the market could cause us to hold a larger percentage of our assets in liquid securities until market conditions improve. - Our portfolio is limited in the number of portfolio companies which may subject us to a risk of significant loss if one or more of these companies defaults on its obligations under any of its debt instruments. - Our portfolio is concentrated in a limited number of industries, which subjects us to a risk of significant loss if there is a downturn in a particular industry in which a number of our investments are concentrated. - Defaults by our portfolio companies may harm our operating results. - By investing in companies that are experiencing significant financial or business difficulties, we are exposed to distressed lending risks. - Certain of the companies we target may have difficulty accessing the capital markets to meet their future capital needs, which may limit their ability to grow or to repay their outstanding indebtedness upon maturity. - Investing in middle market companies involves a high degree of risk and our financial results may be affected adversely if one or more of our portfolio investments defaults on its loans or notes or fails to perform as we expect. - An investment strategy that includes privately held companies presents challenges, including the lack of available information about these companies, a dependence on the talents and efforts of only a few key portfolio company personnel and a greater vulnerability to economic downturns. - Investments in foreign securities may involve significant risks in addition to the risks inherent in U. S. investments. - Economic recessions or downturns could impair our portfolio companies and harm our operating results. - Our failure to maintain our status as a BDC would reduce our operating flexibility. - Regulations governing our operations as a BDC affect our ability to raise additional capital and the way in which we do so. As a BDC, the necessity of raising additional capital may expose us to risks, including the typical risks associated with leverage. - We will be subject to corporate-level U. S. federal income tax if we are unable to qualify as a RIC under the Code. - We may incur additional debt, which could increase the risk in investing in our Company. - The failure in cyber security systems, as well as the occurrence of events unanticipated in our disaster recovery systems and management continuity planning, could impair our ability to conduct business effectively. - There are significant potential conflicts of interest that could impact our investment returns.~~

Item 1. Business. Overview We are a Maryland corporation that was formed in April 2016. We operate as a closed-end, externally managed, non-diversified management investment company that has elected to be regulated as a BDC under the Investment Company Act of 1940, as amended (the "Investment Company Act"). In addition, for tax purposes, we elected to be treated as a RIC under the Code, beginning with our tax year starting October 1, 2016. We seek to generate both income and capital appreciation through debt and income-generating equity investments, including investments in specialty finance businesses. To achieve our investment objective, we invest in secured and senior secured debt instruments of middle market companies, as well as income-generating equity investments in specialty finance companies, that we believe offer sufficient downside protection and have the potential to generate attractive returns. We generally define middle market companies as companies with enterprise values between \$ 100 million and \$ 2 billion. We also make investments throughout other portions of a company's capital structure, including subordinated debt, mezzanine debt, and equity or equity-linked securities. We source these transactions directly with issuers and in the secondary markets through relationships with industry professionals. Our Portfolio at December 31, 2022 A list of the industries in which we have invested as of December 31, 2022 may be found in "Management's Discussion and Analysis of Financial Condition and Results of Operations." Set forth below is a brief description of each

company representing greater than 5% of the fair market value of our portfolio, excluding short-term investments, at December 31, 2022. First Brands, Inc. First Brands, Inc. ("First Brands") is a global automotive parts company that develops, markets and sells premium products through a portfolio of market-leading brands, offering best-in-class technology, industry-leading engineering capabilities and superior customer service. First Brands manufactures automotive and industrial components for the automotive aftermarket, original equipment and industrial markets and has built long-standing relationships with key aftermarket customers including multiple national retail chains and automotive and industrial equipment makers. Lenders Funding, LLC Lenders Funding, LLC ("Lenders Funding") is a private funding and risk sharing source for factors and asset-based lenders. It purchases participations in their transactions on a non-recourse basis or provides working capital to them under a variety of flexible programs. Since its formation, Lenders Funding has worked with over 150 lenders and factors and has supplied several hundred million dollars in funding. Prestige Capital Finance, LLC Prestige Capital Finance, LLC ("Prestige") is a commercial finance company specializing in providing spot factoring services, providing clients with an opportunity to sell individual accounts receivable for an upfront payment. Prestige serves clients across a wide range of industries with between \$100 thousand and \$10 million of accounts receivable. Prestige has been in business for over 30 years and factored over \$6 billion in transactions during that time. Sterling Commercial Credit, LLC Sterling Commercial Credit, LLC ("Sterling") is a specialty finance company providing asset-based loans between \$2 and \$30 million. Sterling is an industry-leading transparent commercial lending partner for growth-minded entrepreneurs, private equity firms and M & A professionals. Investment Manager and Administrator Great Elm Capital Management, Inc.'s ("GECM") investment team has more than 100 years of experience in the aggregate financing and investing in leveraged middle-market companies. GECM's investment committee includes Matt Kaplan, Adam M. Kleinman, Jason W. Reese and Michael Keller. Great Elm Group, Inc. ("GEG") is the parent company of GECM. The address for GECM is 800 South Street, Suite 230, Waltham, MA 02453. Investment Selection GECM employs a team of investment professionals with experience in leveraged and specialty finance. The research team performs fundamental research at both the industry and company level. Through in-depth industry coverage, GECM's investment team seeks to develop a thorough understanding of the fundamental market, sector drivers, mergers and acquisition activity, security pricing and trading and new issue trends. GECM's investment team believes that understanding industry trends is an important element of investment success. We have recently expanded our investment allocation in specialty finance companies as well as in participation opportunities generated by both unrelated and related specialty finance companies. GECM believes investments in specialty finance companies along the "continuum of lending" provide attractive risk-adjusted returns that are expected to be largely uncorrelated to the liquid credit markets. The "continuum of lending" as seen by GECM is the various stages of capital that are provided to under-banked small and medium-sized businesses and includes inventory and purchase order financing, receivables factoring, asset-based and asset-backed lending, and equipment financing. GECM believes that ownership interests in multiple specialty finance companies will create a natural competitive advantage for each business and generate both revenue and cost synergies across companies. In December 2021, GECC's wholly-owned subsidiary, Great Elm Specialty Finance, LLC ("GESF"), was formed to oversee specialty finance related investments, and Michael Keller, a seasoned professional with significant experience in specialty finance, was appointed President of GESF. Idea Generation, Origination and Refinement Idea generation and origination is maximized through long-standing and extensive relationships with industry contacts, brokers, commercial and investment bankers, as well as current and former clients, portfolio companies and investors. GECM's investment team is expected to supplement these lead sources by also utilizing broader research efforts, such as attendance at prospective borrower industry conferences and an active calling effort to brokers and investment bankers. GECM's investment team focuses their idea generation and origination efforts on middle-market companies. In screening potential investments, GECM's investment team utilizes a value-oriented investment philosophy with analysis and research focused on the preservation of capital. GECM has identified several criteria that it believes are important in identifying and investing in prospective portfolio companies. GECM's process requires focus on the terms of the applicable contracts and instruments. GECM's criteria provide general guidelines for GECM's investment committee's decisions; however, not all of these criteria will be met by each prospective portfolio company in which they choose to invest. Asset Based Investments. Investments in businesses based on the value of the collateral or the issuer's assets. This type of investment focuses on expected realizable value of the issuer's assets. Enterprise Value Investments. Investments in businesses whose enterprise value represents the opportunity for principal to be repaid by refinancing or in connection with a merger or acquisition transaction. These investments focus on the going concern value of the enterprise. Other Debt Investments. Investments in businesses which have the ability to pay interest and principal on outstanding debt out of expected free cash flow from their business. These investments focus on the sustainability and defensibility of cash flows from the business. Due Diligence GECM's due diligence typically includes: • analysis of the credit documents by GECM's investment team (including the members of the team with legal training and years of professional experience). GECM will engage outside counsel when necessary as well; • review of historical and prospective financial information; • research relating to the prospective portfolio company's management, industry, markets, customers, products and services and competitors and customers; • verification of collateral or assets; • interviews with management, employees, customers and vendors of the prospective portfolio company; and • informal or formal background and reference checks. Upon the completion of due diligence and a decision to proceed with an investment in a company, the investment professionals leading the diligence process present the opportunity to GECM's investment committee, which then determines whether to pursue the potential investment. Approval of Investment Transactions GECM's procedures call for each new investment under consideration by the GECM analysts to be preliminarily reviewed at periodic meetings of GECM's investment team. GECM's investment team then prepares a summary of the investment, including a financial model and risk cases and a legal review checklist. GECM's investment committee then will hold a formal review meeting, and following approval of a specific investment, authorization is given to GECM's trader, including execution guidelines. GECM's investment analysts provide regular updates of the positions for which they are responsible to members of GECM's investment

committee. GECM's investment analysts and portfolio manager will jointly decide when to sell a position in consultation with members of the GECM investment committee. The sale decision will then be given to GECM's trader, who will execute the trade.

Ongoing Relationship with Portfolio Companies As a BDC, we offer, and sometimes provide upon request, significant managerial assistance to certain of our portfolio companies. This assistance could involve, among other things, monitoring the operations of our portfolio companies, participating in board and management meetings, consulting with and advising officers of our portfolio companies and providing other organizational and financial guidance. GECM's investment team monitors our portfolio companies on an ongoing basis. They monitor the financial trends of each portfolio company and its respective industry to assess the appropriate course of action for each investment. GECM's ongoing monitoring of a portfolio company will include both a qualitative and quantitative analysis of the company and its industry.

Valuation Procedures We value our assets, an essential input in the determination of our net asset value ("NAV") consistent with generally accepted accounting principles in the United States ("GAAP") and as required by the Investment Company Act. See "Management's Discussion and Analysis of Financial Condition and Results of Operations—Critical Accounting Policies and Estimates" for an extended discussion of our methodology.

Staffing We do not currently have any employees. Mr. Kaplan is our Chief Executive Officer and President and Portfolio Manager for GECM, as well as a Managing Director of Imperial Capital Asset Management, LLC ("ICAM"). Under an Administration Agreement, dated as of September 27, 2016 (the "Administration Agreement"), by and between us and GECM, GECM provides the services of our Chief Financial Officer and Chief Compliance Officer. GECM has entered into a shared services agreement with ICAM, pursuant to which ICAM will make available to GECM certain employees of ICAM, including Mr. Kaplan, to provide services to GECM in exchange for reimbursement by GECM of the allocated portion of such employees' time.

Competition We compete for investments with other BDCs and investment funds (including specialty finance companies, private equity funds, hedge funds, mutual funds, mezzanine funds and small business investment companies), as well as traditional financial services companies such as commercial banks, direct lending funds and other sources..... financial services companies such as commercial banks and other sources of funding. Many of our competitors are substantially larger and have considerably greater financial, technical and marketing resources than we do. For example, some competitors have a lower cost of capital and access to funding sources that are not available to us, including from the Small Business Administration. In addition, increased competition for attractive investment opportunities allows debtors to demand more favorable terms and offer fewer contractual protections to creditors. Some of our competitors have higher risk tolerances or different risk assessments than we do. These characteristics could allow our competitors to consider a wider variety of investments, establish more relationships and offer better pricing and more flexible structuring than we are able to offer. We may lose investment opportunities if we do not match our competitors' pricing, terms and structure. If we are forced to match our competitors' pricing, terms and structure, we may not be able to achieve acceptable returns on our investments or may bear substantial risk of capital loss. A significant part of our competitive advantage stems from the fact that the market for investments in lower middle - market companies is underserved by traditional commercial banks and other financing sources. A significant increase in the number and / or the size of our competitors in this target market would force us to accept less attractive investment terms. GECM may, at its discretion, decide to pursue such opportunities if it believes that they are in our best interest; however, GECM may decline to pursue available investment opportunities that, although otherwise consistent with our investment policies and objectives, in GECM's view present unacceptable risk / return profiles. Under such circumstances, we may hold a larger percentage of our assets in liquid securities until market conditions improve in order to avoid having assets remain uninvested. Furthermore, many of our competitors have greater experience operating under, or are not subject to, the regulatory restrictions that the Investment Company Act imposes on us as a BDC. We believe that competitors will make first and second -lien loans with interest rates and returns that are lower than the rates and returns that we target. Therefore, we do not seek to compete solely on the interest rates and returns offered to prospective portfolio companies. We are invested in a limited number of portfolio companies which may subject us to a risk of significant loss if one or more of these companies defaults on its obligations under any of its debt instruments. Our portfolio is likely to hold a limited number of portfolio companies. Beyond the asset diversification requirements associated with qualifying as a RIC, we do not have fixed guidelines for diversification, and our investments are likely to be concentrated in relatively few companies. As our portfolio is less diversified than the portfolios of some funds, we are more susceptible to failure if a single investment fails. Similarly, the aggregate returns we realize may be significantly adversely affected if a small number of investments perform poorly or if we need to write down the value of any one investment. Our portfolio is subject to change over time and may be concentrated in a limited number of industries, which subjects us to a risk of significant loss if there is a downturn in a particular industry in which a number of our investments are concentrated. Our portfolio is likely to be concentrated in a limited number of industries. A downturn in any particular industry in which we are invested could significantly impact our aggregate realized returns. In addition, we may from time to time invest a relatively significant percentage of our portfolio in industries in which GECM does not necessarily have extensive historical research coverage. If an industry in which we have significant investments suffers from adverse business or economic conditions, as these industries have to varying degrees, a material portion of our investment portfolio could be affected adversely, which, in turn, could adversely affect our financial position and results of operations. Any unrealized losses we experience in our portfolio may be an indication of future realized losses, which could reduce our income available for distribution. As a BDC, we are required to carry our investments at fair value as determined in good faith by our Board. Decreases in the fair values of our investments are recorded as unrealized depreciation. Any unrealized losses in our portfolio could be an indication of a portfolio company's inability to meet its repayment obligations to us with respect to the affected investments. This could result in realized losses in the future and ultimately in reductions of our income available for distribution in future periods. Prepayments of our debt investments by our portfolio companies could adversely impact our results of operations and reduce our returns on equity. We are subject to the risk that investments intended to be held over long periods are, instead, repaid prior to maturity. When this occurs, we will generally reinvest these proceeds in temporary

investments, repay debt or repurchase our common stock, depending on expected future investment opportunities. These temporary investments will typically have substantially lower yields than the debt being prepaid and we could experience significant delays in reinvesting these amounts. Any future investment may also be at lower yields than the debt that was repaid. As a result, our results of operations could be materially adversely affected if one or more of our portfolio companies elects to prepay amounts owed by them. We are not in a position to exercise control over certain of our portfolio companies or to prevent decisions by management of such portfolio companies that could decrease the value of our investments. **We-Although we may be deemed, under the Investment Company Act, to control certain of our portfolio companies because we own more than 25 % of the common equity of those portfolio companies, we** generally do not hold controlling equity positions in our portfolio companies. As a result, we are subject to the risk that a portfolio company may make business decisions with which we disagree, and that the management and / or stockholders of a portfolio company may take risks or otherwise act in ways that are adverse to our interests. Due to the lack of liquidity of the debt and equity investments that we hold in certain of our portfolio companies, we may not be able to dispose of such investments if we disagree with the actions of a portfolio company and may therefore suffer a decrease in the value of such investments. We have made, and in the future intend to pursue additional, investments in specialty finance businesses, which may require reliance on the management teams of such businesses. We have made, and may make additional, investments in companies and operating platforms that originate and / or service commercial specialty finance businesses, including factoring, equipment finance, inventory leasing, merchant cash advance and hard money real estate lending and may also invest directly (including via participation) in the investments made by such businesses. The form of investment may vary and may require reliance on management teams to provide the resources necessary to originate new receivables, manage portfolios of performing receivables, and work- out portfolios of stressed or non- performing receivables. Defaults by our portfolio companies may harm our operating results. A portfolio company' s failure to satisfy financial or operating covenants imposed by us or other lenders could lead to defaults and, potentially, termination of our investments and foreclosure on our secured assets, which could trigger cross - defaults under other agreements and jeopardize a portfolio company' s ability to meet its obligations under the debt or equity securities that we hold. We may incur expenses to the extent necessary to seek recovery upon default or to negotiate new terms, which may include the waiver of financial covenants, with a defaulting portfolio company. If any of these occur, it could materially and adversely affect our operating results and cash flows. If we invest in companies that experience significant financial or business difficulties, we may be exposed to certain distressed lending risks. As part of our lending activities, we may purchase notes or loans from companies that are experiencing significant financial or business difficulties, including companies involved in bankruptcy or other reorganization and liquidation proceedings. Although the terms of such financing may result in significant financial returns to us, they involve a substantial degree of risk. The level of analytical sophistication, both financial and legal, necessary for successful financing to companies experiencing significant business and financial difficulties is unusually high. We cannot assure you that we will correctly evaluate the value of the assets collateralizing our investments or the prospects for a successful reorganization or similar action. In any reorganization or liquidation proceeding relating to a portfolio company, we may lose all or part of the amounts advanced to the borrower or may be required to accept collateral with a value less than the amount of the investment advanced by us to the borrower. Certain of the companies in which we invest may have difficulty accessing the capital markets to meet their future capital needs, which may limit their ability to grow or to repay their outstanding indebtedness upon maturity. Senior Secured Loans and Notes. There is a risk that the collateral securing our loans and notes may decrease in value over time, may be difficult to sell in a timely manner, may be difficult to appraise and may fluctuate in value based upon the success of the business and market conditions, including as a result of the inability of the portfolio company to raise additional capital, and, in some circumstances, our lien could be subordinated to claims of other creditors. In addition, deterioration in a portfolio company' s financial condition and prospects, including its inability to raise additional capital, may be accompanied by deterioration in the value of the collateral for the loan or note. Consequently, the fact that a loan or note is secured does not guarantee that we will receive principal and interest payments according to the loan' s or note' s terms, or at all, or that we will be able to collect on the loan or note should we be forced to enforce our remedies. Mezzanine Loans. Our mezzanine debt investments will be generally subordinated to senior loans and will be generally unsecured. As such, other creditors may rank senior to us in the event of an insolvency, which could likely result in a substantial or complete loss on such investment in the case of such insolvency. This may result in an above average amount of risk and loss of principal. Unsecured Loans and Notes. We may invest in unsecured loans and notes. If the issuer defaults or has an event of insolvency, other creditors may rank senior, be structurally senior or have lien protection that effectively renders their claim superior to our rights under our unsecured notes or loans, which could likely result in a substantial or complete loss on such investment in the case of such insolvency. This may result in an above average amount of risk and loss of principal. Unfunded Commitments. From time to time, we purchase revolving credit loans with unfunded commitments in the ordinary course of business. In the event multiple borrowers of such revolving credit loans were to draw these commitments at the same time, including during a market downturn, it could have an adverse impact on our cash reserves and liquidity position at a time when it may be more difficult for us to sell other assets. Equity Investments. When we invest in senior secured loans or mezzanine loans, we may acquire equity securities, including warrants, as well. In addition, we may invest directly in the equity securities of portfolio companies. The equity interests we receive may not appreciate in value and, in fact, may decline in value. Accordingly, we may not be able to realize gains from our equity interests, and any gains that we realize on the disposition of any equity interests may not be sufficient to offset any other losses we experience. In addition, investing in middle - market companies involves a number of significant risks, including: ■ these companies may have limited financial resources and may be unable to meet their obligations under their debt securities that we hold, which may be accompanied by a deterioration in the value of any collateral and a reduction in the likelihood of us realizing any guarantees we may have obtained in connection with our investment; they typically have shorter operating histories, narrower product lines and smaller market shares than larger businesses, which tend to render them more

vulnerable to competitors' actions and market conditions, as well as general economic downturns, ~~including the COVID-19 pandemic~~; they are more likely to depend on the management talents and efforts of a small group of persons; therefore, the death, disability, resignation or termination of one or more of these persons could have a material adverse impact on our portfolio company and, in turn, on our stockholders; they generally have less predictable operating results, may from time to time be parties to litigation, may be engaged in rapidly changing businesses with products subject to a substantial risk of obsolescence, and may require substantial additional capital to support their operations, finance expansion or maintain their competitive position. In addition, our executive officers, directors and GECM may be named as defendants in litigation arising from our investments in the portfolio companies; they may have difficulty accessing the capital markets to meet future capital needs, which may limit their ability to grow or to repay their outstanding indebtedness upon maturity; and a portion of our income may be non-cash income, such as contractual PIK interest, which represents interest added to the debt balance and due at the end of the instrument's term, in the case of loans, or issued as additional notes in the case of bonds. Instruments bearing PIK interest typically carry higher interest rates as a result of their payment deferral and increased credit risk. When we recognize income in connection with PIK interest, there is a risk that such income may become uncollectable if the borrower defaults. Investing in middle-market companies involves a high degree of risk and our financial results may be affected adversely if one or more of our portfolio investments defaults on its loans or notes or fails to perform as we expect. A portion of our portfolio consists of debt and equity investments in privately owned middle-market companies. Investing in middle-market companies involves a number of significant risks. Compared to larger publicly owned companies, these middle-market companies may be in a weaker financial position and experience wider variations in their operating results, which may make them more vulnerable to economic downturns and other business disruptions. Typically, these companies need more capital to compete; however, their access to capital is limited and their cost of capital is often higher than that of their competitors. Our portfolio companies face intense competition from larger companies with greater financial, technical and marketing resources and their success typically depends on the managerial talents and efforts of an individual or a small group of persons. Therefore, the loss of any of their key employees, as well as increased competition in the labor market, could affect a portfolio company's ability to compete effectively and harm its financial condition. Further, some of these companies conduct business in regulated industries that are susceptible to regulatory changes. These factors could impair the cash flow of our portfolio companies and result in other events, such as bankruptcy. These events could limit a portfolio company's ability to repay its obligations to us. Deterioration in a borrower's financial condition and prospects may be accompanied by deterioration in the value of the loan's collateral and the fair market value of the loan. Most of the loans in which we invest are not structured to fully amortize during their lifetime. In order to create liquidity to pay the final principal payment, borrowers typically must raise additional capital or sell their assets, which could potentially result in the collateral being sold for less than its fair market value. If they are unable to raise sufficient funds to repay us, the loan will go into default, which will require us to foreclose on the borrower's assets, even if the loan was otherwise performing prior to maturity. This will deprive us from immediately obtaining full recovery on the loan and prevent or delay the reinvestment of the loan proceeds in other, more profitable investments. Moreover, there are no assurances that any recovery on such loan will be obtained. Most of these companies cannot obtain financing from public capital markets or from traditional credit sources, such as commercial banks. Accordingly, loans made to these types of companies pose a higher default risk than loans made to companies that have access to traditional credit sources. An investment strategy that includes privately held companies presents challenges, including the lack of available information about these companies, a dependence on the talents and efforts of only a few key portfolio company personnel and a greater vulnerability to economic downturns. We invest in privately held companies. Generally, little public information exists about these companies, and we are required to rely on GECM's or our specialty finance partners' ability to obtain adequate information to evaluate the potential returns from investing in these companies. If we are unable to uncover all material information about these companies, we may not make a fully informed investment decision, and may lose money on our investments. Also, privately held companies frequently have less diverse product lines and smaller market presence than larger competitors. These factors could adversely affect our investment returns as compared to companies investing primarily in the securities of public companies. We are exposed to risks relating to our specialty finance products. ~~We rely on the structural features embedded in~~ **There is no guarantee that our controls to monitor and detect fraud with respect to** our specialty ~~financing~~ **finance business will be effective** and ~~asset-based products~~, **as a result, we could face exposure to** ~~mitigate~~ the credit risk associated with such products. With respect to our asset-based loans, we generally limit our lending to a percentage of the customer's borrowing base assets that we believe can be readily liquidated in the event of financial distress of the borrower. With respect to our factoring products, we purchase the underlying invoices of our customers and become the direct payee under such invoices, thus transferring the credit risk in such transactions from our customers to the underlying account debtors on such invoices. In the event one or more of our customers fraudulently represents the existence or valuation of borrowing base assets in the case of an asset-based loan, or the existence or validity of an invoice we purchase in the case of a factoring transaction, we may advance more funds to such customer than we otherwise would and lose the benefit of the structural protections of our products with respect to such advances. In such event we could be exposed to material additional losses with respect to such loans or factoring products. ~~Although we believe we have controls in place to monitor and detect fraud with respect to our asset-based lending and factoring products, there is no guarantee such controls will be effective.~~ Our portfolio companies may incur debt that ranks equally with, or senior to, our investments in such companies. Our portfolio companies may have, or may be permitted to incur, other debt that ranks equally with, or in some cases senior to, the debt in which we invest. By their terms, such debt instruments may entitle the holders to receive payment of interest or principal on or before the dates on which we are entitled to receive payments with respect to the debt instruments in which we invested. Also, in insolvency, liquidation, dissolution, reorganization or bankruptcy of a portfolio company, holders of debt instruments ranking senior to our investment in that portfolio company would typically be entitled to receive payment in full before we receive any distribution. After repaying such senior creditors,

such portfolio company may not have any remaining assets to use for repaying its obligation to us. In the case of debt ranking equally with debt instruments in which we invest, we would have to share on an equal basis any distributions with other creditors holding such debt in the event of an insolvency, liquidation, dissolution, reorganization or bankruptcy of the relevant portfolio company. There may be circumstances where our debt investments could be subordinated to claims of other creditors or we could be subject to lender liability claims. Even though we may have structured investments as secured investments, if one of our portfolio companies were to go bankrupt, depending on the facts and circumstances, and based upon principles of equitable subordination as defined by existing case law, a bankruptcy court could subordinate all or a portion of our claim to that of other creditors and transfer any lien securing such subordinated claim to the bankruptcy estate. The principles of equitable subordination defined by case law have generally indicated that a claim may be subordinated only if its holder is guilty of misconduct or where the senior investment is re-characterized as an equity investment and the senior lender has actually provided significant managerial assistance to the bankrupt debtor. We may also be subject to lender liability claims for actions taken by us with respect to a borrower's business or instances where we exercise control over the borrower. It is possible that we could become subject to a lender's liability claim, including as a result of actions taken in rendering managerial assistance or actions to compel and collect payments from the borrower outside the ordinary course of business. To the extent GECC provides significant managerial assistance to the portfolio companies, this risk is exacerbated. Second priority liens on collateral securing loans and notes that we invest in may be subject to control by senior creditors with first priority liens. If there is a default, the value of the collateral may not be sufficient to repay in full both the first priority creditors and us. We may purchase loans or notes that are secured by a second priority security interest in the same collateral pledged by a portfolio company to secure senior debt owed by the portfolio company to commercial banks or other traditional lenders. Often the senior lender has procured covenants from the portfolio company prohibiting the incurrence of additional secured debt without the senior lender's consent. Prior to and as a condition of permitting the portfolio company to borrow money from us secured by the same collateral pledged to the senior lender, the senior lender will require assurances that it will control the disposition of any collateral in the event of bankruptcy or other default. In many such cases, the senior lender will require us or the indenture trustee to enter into an "intercreditor agreement" prior to permitting the portfolio company to borrow. Typically the intercreditor agreements expressly subordinate our **second lien** debt instruments to those held by the senior lender and further provide that the senior lender shall control: (1) the commencement of foreclosure or other proceedings to liquidate and collect on the collateral; (2) the nature, timing and conduct of foreclosure or other collection proceedings; (3) the amendment of any collateral document; (4) the release of the security interests in respect of any collateral; and (5) the waiver of defaults under any security agreement. Because of the control we may cede to senior lenders under intercreditor agreements we may enter, we may be unable to realize the proceeds of any collateral securing some of our loans and notes. The reference rates for our loans may be manipulated or changed. Actions by market participants or by government agencies, including central banks, may affect prevailing interest rates and the reference rates for loans to our portfolio companies. Actions by governments may create inflation in asset prices that overstate the value of our portfolio companies and their assets and drive cycles of capital market activities (like mergers and acquisitions) at a rate and at prices in excess of those that would prevail in an unaffected market. We cannot assure you that actions by market participants or by government agencies will not materially adversely affect trading markets or our portfolio companies or us or our and our portfolio companies' respective business, prospects, ~~financial condition or results of operations. The discontinuation of LIBOR may adversely affect the value of the LIBOR-indexed, floating rate debt securities in our portfolio or the cost of our borrowings.~~ National and international regulators and law enforcement agencies have conducted investigations into a number of rates or indices that are deemed to be "reference rates." Actions by such regulators and law enforcement agencies may result in changes to the manner in which certain reference rates are determined, their discontinuance, or the establishment of alternative reference rates. In particular, on July 27, 2017, the Chief Executive of the U. K. Financial Conduct Authority (the "FCA"), which regulates the London Interbank Offered Rate ("LIBOR"), announced that the FCA will no longer persuade or compel banks to submit rates for the calculation of LIBOR after 2021. As of the date of this Annual Report, USD LIBOR is available in five settings (overnight, one-month, three-month, six-month and 12-month). The ICE Benchmark Administration ("IBA") has stated that it will cease to publish all remaining USD LIBOR settings immediately following their publication on June 30, 2023, absent subsequent action by the relevant authorities. As of January 1, 2022, all non-USD LIBOR reference rates in all settings ceased to be published. There can be no assurance that non-USD synthetic LIBOR or USD LIBOR will remain available in the future. The U. S. Federal Reserve, in conjunction with the Alternative Reference Rates Committee (the "ARRC"), a steering committee comprised of large U. S. financial institutions, has identified the Secured Overnight Financing Rate ("SOFR") as its preferred alternative rate for LIBOR. On December 6, 2021, the ARRC released a statement selecting and recommending forms of SOFR, along with associated spread adjustments and conforming changes, to replace references to 1-week and 2-month USD LIBOR. We expect that a substantial portion of our future floating rate investments will be linked to SOFR. At this time, it is not possible to predict the effect of the transition to SOFR. Although there have been an increasing number of issuances utilizing SOFR or the Sterling Over Night Index Average ("SONIA") (the GBP-LIBOR nominated replacement alternative reference rate that is based on transactions), it is unknown whether SOFR or any other alternative reference rates will attain market acceptance as replacements for LIBOR. Given the inherent differences between LIBOR and SOFR, or any other alternative reference rates that may be established, the transition from LIBOR may disrupt the overall financial markets and adversely affect the market for LIBOR-based securities, including our portfolio of LIBOR-indexed, floating rate debt securities, or the cost of our borrowings. In addition, changes or reforms to the determination or supervision of LIBOR may result in a sudden or prolonged increase or decrease in reported LIBOR, which could have an adverse impact on the market for LIBOR-based securities, including the value and /or transferability of the LIBOR-indexed, floating rate debt securities in our portfolio, or the cost of our borrowings. Additionally, if as currently expected LIBOR ceases to exist, we may need to renegotiate the credit agreements extending beyond June 30, 2023, with our

credit facility lenders and our portfolio companies that utilize LIBOR as a factor in determining the interest rate to replace LIBOR with SOFR or other alternative reference rates, which could require us to incur significant time and expense and may subject us to disputes or litigation over the appropriateness or comparability to the relevant replacement reference index. The transition from LIBOR to SOFR or other alternative reference rates may also introduce operational risks in our accounting, financial reporting, loan servicing, liability management and other aspects of our business. We are in the process of transitioning our investments and our borrowings from LIBOR to SOFR and we do not expect that the transition will have a material impact on our business, financial condition or results of operations. We may mismatch the interest rate and maturity exposure of our assets and liabilities. Our net investment income depends, in part, upon the difference between the rate at which we borrow funds and the rate at which we invest those funds. We cannot assure you that a significant change in market interest rates will not have a material adverse effect on our net investment income. In periods of rising interest rates, our cost of funds could increase, which could reduce our net investment income. Typically, our fixed - rate investments are financed primarily with equity and / or long - term debt. We may use interest rate risk management techniques in an effort to limit our exposure to interest rate fluctuations. Such techniques may include various interest rate hedging activities to the extent permitted by the Investment Company Act. If we do not implement these techniques properly, we could experience losses on our hedging positions, which could be material. If interest rates fall, our portfolio companies are likely to refinance their obligations to us at lower interest rates. Our proceeds from these refinancings are likely to be reinvested at lower interest rates than our refinanced loans resulting in a material decrease in our net investment income. We may not realize gains from our equity investments. Our portfolio may include common stock, warrants or other equity securities. We may also take back equity securities in exchange for our debt investments in workouts of troubled investments. Investments in equity securities involve a number of significant risks, including the risk of further dilution as a result of additional issuances, inability to access additional capital and failure to pay current distributions. Investments in preferred securities involve special risks, such as the risk of deferred distributions, credit risk, illiquidity and limited voting rights. In addition, we may from time to time make non - control, equity investments in portfolio companies. The equity interests we invest in may not appreciate in value and, in fact, may decline in value. Accordingly, we may not be able to realize gains from our equity interests, and any gains that we do realize on the disposition of any equity interests may not be sufficient to offset any other losses we experience. We also may be unable to realize any value if a portfolio company does not have a liquidity event, such as a sale of the business, recapitalization or public offering, which would allow us to sell the underlying equity interests. We may seek puts or similar rights to give it the right to sell our equity securities back to the portfolio company. We may be unable to exercise these put rights if the issuer is in financial distress or otherwise lacks sufficient liquidity to purchase the underlying equity investment. Investments in foreign securities may involve significant risks in addition to the risks inherent in U. S. investments. Our investment strategy contemplates investments in debt securities of foreign companies. Investing in foreign companies may expose us to additional risks not typically associated with investing in U. S. companies. These risks include changes in exchange control regulations, political and social instability, expropriation, imposition of foreign taxes, less liquid markets and less available information than is generally the case in the United States, higher transaction costs, less government supervision of exchanges, brokers and issuers, less developed bankruptcy laws, difficulty in enforcing contractual obligations, lack of uniform accounting and auditing standards and greater price volatility. Such investments will generally not represent “ qualifying assets ” under Section 55 (a) of the Investment Company Act. Pursuant to the Investment Company Act, qualifying assets must represent at least 70 % of our total assets at the time of acquisition of any additional non - qualifying assets. If we do not meet the 70 % threshold, we will be limited to purchasing qualifying assets until such threshold is met. See “ Regulation as a Business Development Company. ” Any investments denominated in a foreign currency will be subject to the risk that the value of a particular currency will change in relation to one or more other currencies. Among the factors that may affect currency values are trade balances, the level of short - term interest rates, differences in relative values of similar assets in different currencies, long - term opportunities for investment and capital appreciation, and political developments. We may employ hedging techniques to minimize these risks, but we offer no assurance that we will, in fact, hedge currency risk, or that if it does, such strategies will be effective. We may hold a significant portion of our portfolio assets in cash, cash equivalents, money market mutual funds, U. S. government securities, repurchase agreements and high- quality debt instruments maturing in one year or less, which may have a negative impact on our business and operations. We may hold a significant portion of our portfolio assets in cash, cash equivalents, money market mutual funds, U. S. government securities, repurchase agreements and high- quality debt instruments maturing in one year or less for many reasons, including, among others: • as part of GECM’ s strategy in order to take advantage of investment opportunities as they arise ; • when GECM believes that market conditions are unfavorable for profitable investing ; • when GECM is otherwise unable to locate attractive investment opportunities ; • as a defensive measure in response to adverse market or economic conditions ; • or to meet RIC qualification requirements. We may also be required to hold higher levels of cash, money market mutual funds or other short- term securities in order to pay our expenses or make distributions to stockholders in the ordinary course of business given the relatively high percentage of our total investment income represented by non- cash income, including PIK income and accretion of original issue discount (“ OID ”). During periods when we maintain exposure to cash, money market mutual funds, or other short- term securities, we may not participate in market movements to the same extent that it would if we were fully invested, which may have a negative impact on our business and operations and, accordingly, our returns may be reduced. Risks Relating to Our Business and Structure Capital markets experience periods of disruption and instability. These market conditions have historically materially and adversely affected debt and equity capital markets in the United States and abroad, which had, and may in the future have, a negative impact on our business and operations. The global capital markets are subject to disruption as evidenced by which may result from, among other things, a lack of liquidity in the debt capital markets, significant write - offs in the financial services sector, the re - pricing of credit risk in the broadly syndicated credit market and/or the failure of major financial institutions. Despite actions of the U.

S. federal government and foreign governments, ~~these such~~ events ~~have contributed to worsening general economic conditions that~~ have historically materially and adversely impacted the broader financial and credit markets and reduced the availability of debt and equity capital for the market as a whole and financial services firms in particular. ~~We cannot provide any assurance that these conditions will not significantly worsen.~~ Equity capital may be difficult to raise because, as a BDC, we are generally not able to issue additional shares of our common stock at a price less than NAV. In addition, our ability to incur indebtedness or issue preferred stock is limited by applicable regulations such that our asset coverage, as defined in the Investment Company Act, must equal at least 150 % immediately after each time we incur indebtedness or issue preferred stock. The debt capital that may be available, if at all, may be at a higher cost and on less favorable terms and conditions in the future. Any inability to raise capital could have a negative effect on our business, financial condition and results of operations. Market conditions may in the future make it difficult to extend the maturity of or refinance our existing indebtedness, and any failure to do so could have a material adverse effect on our business. The expected illiquidity of our investments may make it difficult for us to sell such investments if required. As a result, we may realize significantly less than the value at which we have recorded our investments. In addition, significant changes in the capital markets, including recent volatility and disruption, have had, and may in the future have, a negative effect on the valuations of our investments and on the potential for liquidity events involving our investments. An inability to raise capital, and any required sale of our investments for liquidity purposes, could have a material adverse impact on our business, financial condition and results of operations. We may experience fluctuations in our quarterly results. Our quarterly operating results will fluctuate due to a number of factors, including the level of expenses, variations in and the timing of the recognition of realized and unrealized gains or losses, the degree to which we encounter competition in our markets and general economic conditions. Our quarterly operating results will also fluctuate due to a number of other factors, including the interest rates payable on the debt investments we make and the default rates on such investments. As a result of these factors, results for any period should not be relied upon as being indicative of performance in future periods. Our success depends on the ability of our investment adviser to attract and retain qualified personnel in a competitive environment. Our growth requires that GECM retain and attract new investment and administrative personnel in a competitive market. GECM's ability to attract and retain personnel with the requisite credentials, experience and skills depends on several factors, including, but not limited to, its ability to offer competitive wages, benefits and professional growth opportunities. Many of the entities, including investment funds (such as private equity funds and mezzanine funds) and traditional financial services companies, which compete for experienced personnel with GECM, have greater resources than GECM. Our ability to grow depends on our ability to raise equity capital and / or access debt financing. We intend to periodically access the capital markets to raise cash to fund new investments. We expect to continue to elect to be treated as a RIC and operate in a manner so as to qualify for the U. S. federal income tax treatment applicable to RICs. Among other things, in order to maintain our RIC status, we must distribute to our stockholders on a timely basis generally an amount equal to at least 90 % of our investment company taxable income (as defined by the Code), and, as a result, such distributions will not be available to fund new investments. As a result, we must borrow from financial institutions or issue additional securities to fund our growth. Unfavorable economic or capital market conditions, including interest rate volatility, may increase our funding costs, limit our access to the capital markets or could result in a decision by lenders not to extend credit to us. There has been and will continue to be uncertainty in the financial markets in general. An inability to successfully access the capital or credit markets for either equity or debt could limit our ability to grow our business and fully execute our business strategy and could decrease our earnings, if any. If the fair value of our assets declines substantially, we may fail to maintain the asset coverage ratios imposed upon us by the Investment Company Act or our lenders. Any such failure, or a tightening or general disruption of the credit markets, would affect our ability to issue senior securities, including borrowings, and pay dividends or other distributions, which could materially impair our business. In addition, with certain limited exceptions we are only allowed to borrow or issue debt securities or preferred stock such that our asset coverage, as defined in the Investment Company Act, equals at least 150 % immediately after such borrowing, which, in certain circumstances, may restrict our ability to borrow or issue debt securities or preferred stock. The amount of leverage that we may employ will depend on GECM's and our Board's assessments of market and other factors at the time of any proposed borrowing or issuance of debt securities or preferred stock. We cannot assure you that we will be able to obtain lines of credit at all or on terms acceptable to us. Economic recessions or downturns could impair our portfolio companies and harm our operating results. The economy is subject to periodic downturns that, from time to time, result in recessions or more serious adverse macroeconomic events. Our portfolio companies are susceptible to economic slowdowns or recessions and may be unable to repay loans or notes during these periods. Therefore, our non - performing assets may increase and the value of our portfolio may decrease during these periods as we are required to record the market value of our investments. Adverse economic conditions may also decrease the value of collateral securing some of our investments and the value of our equity investments. Economic slowdowns or recessions could lead to financial losses in our portfolio and a decrease in revenues, net income and assets. Unfavorable economic conditions also could increase our funding costs, limit our access to the capital markets or result in a decision by lenders not to extend credit to us. These events could prevent us from increasing investments and harm our operating results. A portfolio company's failure to satisfy financial or operating covenants in its agreements with us or other lenders could lead to defaults and, potentially, acceleration of the time when the debt obligations are due and foreclosure on its secured assets, which could trigger cross - defaults under other agreements and jeopardize the portfolio company's ability to meet its obligations under the debt that we hold. We may incur additional expenses to the extent necessary to seek recovery upon default or to negotiate new terms with a defaulting portfolio company. In addition, if one of our portfolio companies were to go bankrupt, depending on the facts and circumstances, including the extent to which we actually provided significant managerial assistance to that portfolio company, a bankruptcy court might re- characterize our debt holding and subordinate all or a portion of our claim to that of other creditors. Global economic, political and market conditions may adversely affect our business, results of operations and financial condition, including our revenue growth and profitability. The condition of the

global financial market, as well as various social and political tensions in the United States and around the world, may contribute to increased market volatility, may have long- term effects on the U. S. and worldwide financial markets, may cause economic uncertainties or deterioration in the United States and worldwide, and may subject our investments to heightened risks. These heightened risks could also include to: increased risk of default; greater social, trade, economic and political instability (including the risk of war or terrorist activity); greater governmental involvement in the economy; greater governmental supervision and regulation of the securities markets and market participants resulting in increased expenses related to compliance; greater fluctuations in currency exchange rates; controls or restrictions on foreign investment and / or trade, capital controls and limitations on repatriation of invested capital and on the ability to exchange currencies; inability to purchase and sell investments or otherwise settle transactions (i. e., a market freeze); and unavailability of hedging techniques. During times of political uncertainty and / or change, global markets often become more volatile. Markets experiencing political uncertainty and / or change could have substantial, and in some periods extremely high, rates of inflation for many years. Inflation and rapid fluctuations in inflation rates typically have negative effects on such countries' economies and markets. Tax laws could change materially, and any changes in tax laws could have an unpredictable effect on us, our investments and our investors. Our debt investments may be risky, and we could lose all or part of our investments. Our debt portfolios, including those held by our specialty finance companies, are subject to credit and interest rate risk. "Credit risk" refers to the likelihood that an issuer will default in the payment of principal and / or interest on an instrument. Financial strength and solvency of an issuer are the primary factors influencing credit risk. In addition, subordination, lack or inadequacy of collateral or credit enhancement for a debt instrument may affect its credit risk. Credit risk may change over the life of an instrument, and securities which are rated by rating agencies are often reviewed and may be subject to downgrade. "Interest rate risk" refers to the risks associated with market changes in interest rates. Factors that may affect market interest rates include, without limitation, inflation, slow or stagnant economic growth or recession, unemployment, money supply and the monetary policies of the Federal Reserve Board and central banks throughout the world, international disorders and instability in domestic and foreign financial markets. The Federal Reserve Board **has since** raised the federal funds rate **and may** from 2015 to 2018, but cut the rate to near zero by the end of 2020 in response to the COVID-19 pandemic. The Federal Reserve Board has since raised - **raise, maintain or lower** the federal funds rate **and has consistently indicated it may continue to raise the federal funds rate** in the near future. These developments, along with domestic and international debt and credit concerns, could cause interest rates to be volatile, which may negatively impact our ability to access the debt markets on favorable terms. Interest rate changes may also affect the value of a debt instrument indirectly (especially in the case of fixed rate securities) and directly (especially in the case of instruments whose rates are adjustable). In general, rising interest rates will negatively impact the price of a fixed- rate debt instrument and falling interest rates will have a positive effect on price. Adjustable rate instruments may also react to interest rate changes in a similar manner although generally to a lesser degree (depending, however, on the characteristics of the reset terms, including, among other factors, the index chosen, frequency of reset and reset caps or floors). Interest rate sensitivity is generally more pronounced and less predictable in instruments with uncertain payment or prepayment schedules. We expect that we will periodically experience imbalances in the interest rate sensitivities of our assets and liabilities and the relationships of various interest rates to each other. In a changing interest rate environment, we may not be able to manage this risk effectively, which in turn could adversely affect our performance. We may acquire other funds, portfolios of assets or pools of debt and those acquisitions may not be successful. We may acquire other funds, portfolios of assets or pools of debt investments. Any such acquisition program has a number of risks, including among others: management' s attention will be diverted from running our existing business by efforts to source, negotiate, close and integrate acquisitions; our due diligence investigation of potential acquisitions may not reveal risks inherent in the acquired business or assets; we may over - value potential acquisitions resulting in dilution to you, incurrence of excessive indebtedness, asset write downs and negative perception of our common stock; the interests of our existing stockholders may be diluted by the issuance of additional shares of our common stock or preferred stock; we may borrow to finance acquisitions, and there are risks associated with borrowing as described in this Annual Report on Form 10- K; GECCM has an incentive to increase our assets under management in order to increase its fee stream, which may not be aligned with the interests of our stockholders; we and GECCM may not successfully integrate any acquired business or assets; and GECCM may compensate the existing managers of any acquired business or assets in a manner that results in the combined company taking on excessive risk. Our failure to maintain our status as a BDC would reduce our operating flexibility. We elected to be regulated as a BDC under the Investment Company Act. The Investment Company Act imposes numerous constraints on the operations of BDCs and their external advisers. For example, BDCs are required to invest at least 70 % of their gross assets in specified types of securities, primarily in private companies or illiquid U. S. public companies below a certain market capitalization, cash, cash equivalents, U. S. government securities and other high quality debt investments that mature in one year or less. Furthermore, any failure to comply with the requirements imposed on BDCs by the Investment Company Act could cause the SEC to bring an enforcement action against us and / or expose us to claims of private litigants. In addition, upon approval of a majority of our voting securities (as defined under the Investment Company Act), we may elect to withdraw our status as a BDC. If we decide to withdraw our BDC election, or if we otherwise fail to qualify, or to maintain our qualification, as a BDC, we may be subject to substantially greater regulation under the Investment Company Act as a closed - end management investment company. Compliance with such regulations would significantly decrease our operating flexibility and would significantly increase our costs of doing business. Regulations governing our operations as a BDC affect our ability to raise additional capital and the way in which we do so. As a BDC, the necessity of raising additional capital may expose us to risks, including the typical risks associated with leverage. We may issue debt securities or preferred stock and / or borrow money from banks or other financial institutions, referred to collectively as "senior securities," up to the maximum amount permitted under the Investment Company Act. Under the provisions of the Investment Company Act applicable to BDCs, we are permitted to issue senior securities (e. g., notes and preferred stock) in amounts such that our asset coverage ratio, as defined

in the Investment Company Act, equals at least 150 % of gross assets less all liabilities and indebtedness not represented by senior securities, after each issuance of senior securities. If the value of our assets declines, we may be unable to satisfy this test. If that happens, we may be required to sell a portion of our investments and, depending on the nature of our leverage, repay a portion of our indebtedness at a time when such sales may be disadvantageous. Also, any amounts that we use to service our indebtedness would not be available for distributions to our stockholders. Furthermore, as a result of issuing senior securities, we would also be exposed to typical risks associated with leverage, including an increased risk of loss. Our Board may change our investment objectives, operating policies and strategies without prior notice or stockholder approval, the effects of which may be adverse. Our Board has the authority to modify or waive our investment objectives, current operating policies, investment criteria and strategies without prior notice and without stockholder approval. We cannot predict the effect any changes to our current operating policies, investment criteria and strategies would have on our business, NAV and operating results. We may have difficulty paying our required distributions under applicable tax rules if we recognize income before or without receiving cash representing such income. For U. S. federal income tax purposes, we may be required to include in income certain amounts before our receipt of the cash attributable to such amounts, such as OID, which may arise if we receive warrants in connection with the making of a loan or possibly in other circumstances, or PIK interest, which represents contractual interest added to the loan balance and due at the end of the loan term. For example, such OID or increases in loan balances as a result of PIK interest will be included in income before we receive any corresponding cash payments. Also, we may be required to include in income other amounts that we will not receive in cash, including, for example, non - cash income from PIK securities, deferred payment securities and hedging and foreign currency transactions. In addition, we intend to seek debt investments in the secondary market that represent attractive risk- adjusted returns, taking into account both stated interest rates and current market discounts to par value. Such market discount may be included in income before we receive any corresponding cash payments. Certain of our debt investments earn PIK interest. Since we may recognize income before or without receiving cash representing such income, we may have difficulty meeting the U. S. federal income tax requirement to distribute generally an amount equal to at least 90 % of our investment company taxable income to maintain our status as a RIC. Accordingly, we may have to sell some of our investments at times we would not consider advantageous, raise additional debt or equity capital or reduce new investment originations to meet these distribution requirements. If we are not able to obtain cash from other sources, we may fail to qualify as a RIC and thus be subject to additional corporate - level income taxes. However, in order to satisfy the Annual Distribution Requirement for a RIC, we may, but have no current intention to, declare a large portion of a dividend in shares of our common stock instead of in cash. As long as a portion of such dividend is paid in cash (~~which portion may be as low as 20 % of such dividend, or 10 % with respect to distributions declared on or before June 30, 2022~~) and certain requirements are met, the entire distribution will be treated as a dividend for U. S. federal income tax purposes. We may expose ourselves to risks associated with the inclusion of non- cash income prior to receipt of cash. To the extent we invest in OID instruments, including PIK loans, zero coupon bonds, and debt securities with attached warrants, investors will be exposed to the risks associated with the inclusion of such non- cash income in taxable and accounting income prior to receipt of cash. The deferred nature of payments on PIK loans creates specific risks. Interest payments deferred on a PIK loan are subject to the risk that the borrower may default when the deferred payments are due in cash at the maturity of the loan. Since the payment of PIK income does not result in cash payments to us, we may also have to sell some of our investments at times we would not consider advantageous, raise additional debt or equity capital or reduce new investment originations (and thus hold higher cash or cash equivalent balances, which could reduce returns) to pay our expenses or make distributions to stockholders in the ordinary course of business, even if such loans do not default. An election to defer PIK interest payments by adding them to principal increases our gross assets and, thus, increases future base management fees to GECM and, because interest payments will then be payable on a larger principal amount, the PIK election also increases GECM' s future Income Incentive Fees at a compounding rate. The deferral of interest on a PIK loan increases its loan- to- value ratio, which is a measure of the riskiness of a loan. More generally, market prices of OID instruments are more volatile because they are impacted to a greater extent by interest rate changes than instruments that pay interest periodically in cash. Ordinarily, OID would also create the risk of non-refundable cash payments to GECM based on non- cash accruals that may never be realized; however, this risk is mitigated since the Investment Management Agreement requires GECM to defer any incentive fees on Accrued Unpaid Income, the effect of which is that Income Incentive Fees otherwise payable with respect to Accrued Unpaid Income become payable only if, as, when and to the extent cash is received by us or our consolidated subsidiaries in respect thereof. Additionally, we may be required to make distributions of non- cash income to stockholders without receiving any cash so as to satisfy certain requirements necessary to maintain our RIC status for U. S. federal income tax purposes. Such required cash distributions may have to be paid from the sale of our assets without investors being given any notice of this fact. The required recognition of non-cash income, including PIK and OID interest, for U. S. federal income tax purposes may have a negative impact on liquidity because it represents a non- cash component of our taxable income that must, nevertheless, be distributed to investors to avoid us being subject to corporate level taxation. We may choose to pay distributions in our own stock, in which case stockholders may be required to pay tax in excess of the cash they receive. We may distribute a portion of our taxable distributions in the form of shares of our stock. In accordance with certain applicable U. S. Treasury regulations and other related administrative pronouncements issued by the Internal Revenue Service, a RIC may be eligible to treat a distribution of its own stock as fulfilling its RIC distribution requirements if each stockholder is permitted to elect to receive his or her entire distribution in either cash or stock of the RIC, subject to the satisfaction of certain guidelines. If too many stockholders elect to receive cash, each stockholder electing to receive cash must receive a pro rata amount of cash (with the balance of the distribution paid in stock). If these and certain other requirements are met, for U. S. federal income tax purposes, the amount of the distribution paid in stock generally will be equal to the amount of cash that could have been received instead of stock. Taxable stockholders receiving such distributions will be required to include the full amount of the distribution as ordinary income (or as long- term

capital gain to the extent such distribution is properly reported as a capital gain dividend) to the extent of their share of our current and accumulated earnings and profits for U. S. federal income tax purposes. As a result, a U. S. stockholder may be subject to tax with respect to such distributions in excess of any cash received. If a U. S. stockholder sells the stock it receives as a distribution in order to pay this tax, the sales proceeds may be less than the amount included in income with respect to the distribution, depending on the market price of our stock at the time of the sale. Furthermore, with respect to non- U. S. stockholders, we may be required to withhold U. S. tax with respect to such distributions, including in respect of all or a portion of such distribution that is payable in stock. In addition, if a significant number of our stockholders determine to sell shares of our stock in order to pay taxes owed on distributions, such sales may put downward pressure on the trading price of our stock. We may expose our self to risks if we engage in hedging transactions. If we engage in hedging transactions, we may expose our self to risks associated with such transactions. We may utilize instruments such as forward contracts, currency options and interest rate swaps, caps, collars and floors to seek to hedge against fluctuations in the relative values of our portfolio positions from changes in currency exchange rates and market interest rates. Hedging against a decline in the values of our portfolio positions does not eliminate the possibility of fluctuations in the values of such positions or prevent losses if the values of such positions decline. Such hedging transactions may also limit the opportunity for gain if the values of the underlying portfolio positions increase. It may not be possible to hedge against an exchange rate or interest rate fluctuation that is generally anticipated because we may not be able to enter into a hedging transaction at an acceptable price. Moreover, for a variety of reasons, we may not seek to establish a perfect correlation between such hedging instruments and the portfolio holdings being hedged. Any such imperfect correlation may prevent us from achieving the intended hedge and expose us to risk of loss. In addition, it may not be possible to hedge fully or perfectly against currency fluctuations affecting the value of securities denominated in non - U. S. currencies because the value of those securities is likely to fluctuate as a result of factors not related to currency fluctuations. We will be subject to corporate - level U. S. federal income tax if we are unable to qualify as a RIC under the Code. No assurance can be given that we will be able to qualify for and maintain RIC status. To maintain RIC tax treatment under the Code, we must meet certain annual distribution, source of income and asset diversification requirements. The Annual Distribution Requirement for a RIC will be satisfied if we distribute to our stockholders on an annual basis at least 90 % of our net ordinary income and realized net short - term capital gains in excess of realized net long - term capital losses, if any. Because we may use debt financing, we may be subject to asset coverage ratio requirements under the Investment Company Act and financial covenants under loan and credit agreements that could, under certain circumstances, restrict us from making distributions necessary to satisfy the distribution requirement. If we are unable to make the required distributions, we could fail to qualify for RIC tax treatment and thus become subject to corporate - level U. S. federal income tax. The source of income requirement will be satisfied if we obtain at least 90 % of our income for each year from dividends, interest, gains from the sale of stock or securities or similar sources. The asset diversification requirement will be satisfied if we meet asset diversification requirements at the end of each quarter of our taxable year. Failure to meet the asset diversification requirements could result in us having to dispose of investments quickly in order to prevent the loss of RIC status. Because most of our investments will be relatively illiquid, any such dispositions could be made at disadvantageous prices and could result in substantial losses. Further, the illiquidity of our investments may make them difficult or impossible to dispose of in a timely manner. If we fail to qualify for RIC tax treatment for any reason and become subject to corporate U. S. federal income tax, the resulting corporate taxes could substantially reduce our net assets, the amount of income available for distribution and the amount of our distributions and the value of our shares of common stock. **We cannot predict how tax reform legislation will affect us, our investments, or our stockholders, and any such legislation could adversely affect our business. Legislative or other actions relating to taxes could have a negative effect on us. The rules dealing with U. S. federal income taxation are constantly under review by persons involved in the legislative process and by the Internal Revenue Service and the U. S. Treasury Department. We cannot predict with certainty how any changes in the tax laws might affect us, our stockholders, or our portfolio investments. New legislation and any U. S. Treasury regulations, administrative interpretations or court decisions interpreting such legislation could significantly and negatively affect our ability to qualify for tax treatment as a RIC or the U. S. federal income tax consequences to us and our stockholders of such qualification, or could have other adverse consequences. Investors are urged to consult with their tax adviser regarding tax legislative, regulatory or administrative developments and proposals and their potential effect on an investment in our securities.** The incentive fee structure and the formula for calculating the management fee may incentivize GECEM to pursue speculative investments, advise us to use leverage when it may be unwise to do so, or advise us to refrain from reducing debt levels when it would otherwise be appropriate to do so. The incentive fee payable by us to GECEM creates an incentive for GECEM to pursue investments on our behalf that are riskier or more speculative than would be the case in the absence of such a compensation arrangement. The incentive fee payable to GECEM is calculated based on a percentage of our return on invested capital. In addition, GECEM' s base management fee is calculated on the basis of our gross assets, including assets acquired through the use of leverage. This may encourage GECEM to use leverage to increase the aggregate amount of and the return on our investments, even when it may not be appropriate to do so, and to refrain from reducing debt levels when it would otherwise be appropriate to do so. The use of leverage increases our likelihood of default, which would impair the value of our securities. In addition, GECEM will receive the incentive fee based, in part, upon net capital gains realized on our investments. Unlike that portion of the incentive fee based on income, there will be no hurdle rate applicable to the portion of the incentive fee based on net capital gains. As a result, GECEM may have a tendency to invest more capital in investments that are likely to result in capital gains as compared to income producing securities. Such a practice could result in us investing in more speculative securities than would otherwise be the case, which could result in higher investment losses, particularly during economic downturns. We may invest in the securities and instruments of other investment companies, including private funds, and we will bear our ratable share of any such investment company' s expenses, including management and performance fees. We will also remain obligated

to pay management and incentive fees to GECM with respect to the assets invested in the securities and instruments of other investment companies. With respect to each of these investments, each of our stockholders will bear its share of the management and incentive fee payable to GECM, as well as indirectly bearing the management and performance fees and other expenses of any investment companies in which we invest. In addition, if we purchase our debt instruments and such purchase results in our recording a net gain on the extinguishment of debt for financial reporting and tax purposes, such net gain will be included in our pre - incentive fee net investment income for purposes of determining the Income Incentive Fee payable to GECM under the Investment Management Agreement. Finally, the incentive fee payable by us to GECM also may create an incentive for GECM to invest on our behalf in instruments that have a deferred interest feature such as investments with PIK provisions. Under these investments, we would accrue the interest over the life of the investment but would typically not receive the cash income from the investment until the end of the term or upon the investment being called by the issuer. Our net investment income used to calculate the income portion of our incentive fee, however, includes accrued interest. The portion of the incentive fee that is attributable to deferred interest, such as PIK, will not be paid to GECM until we receive such interest in cash. Even though such portion of the incentive fee will be paid only when the accrued income is collected, the accrued income is capitalized and included in the calculation of the base management fee. In other words, when deferred interest income (such as PIK) is accrued, a corresponding Income Incentive Fee (if any) is also accrued (but not paid) based on that income. After the accrual of such income, it is capitalized and added to the debt balance, which increases our total assets and thus the base management fee paid following such capitalization. If any such interest is reversed in connection with any write- off or similar treatment of the investment, we will reverse the Income Incentive Fee accrual and an Income Incentive Fee will not be payable with respect to such uncollected interest. If a portfolio company defaults on a loan **that is structured to provide accrued interest**, it is possible that accrued interest previously used in the calculation of ~~whether GECM met the hurdle rate to earn~~ the incentive fee will become uncollectible, **which would result in the reversal of any previously accrued and unpaid incentive fees**. A general increase in interest rates will likely have the effect of making it easier for GECM to receive incentive fees, without necessarily resulting in an increase in our net earnings. Given the structure of the Investment Management Agreement, any general increase in interest rates will likely have the effect of making it easier for GECM to meet the quarterly hurdle rate for payment of Income Incentive Fees under the Investment Management Agreement without any additional increase in relative performance on the part of GECM. In addition, in view of the catch - up provision applicable to Income Incentive Fees under the Investment Management Agreement, GECM could potentially receive a significant portion of the increase in our investment income attributable to such a general increase in interest rates. If that were to occur, our increase in net earnings, if any, would likely be significantly smaller than the relative increase in GECM' s Income Incentive Fee resulting from such a general increase in interest rates. GECM has the right to resign on 60 days' notice, and we may not be able to find a suitable replacement within that time, resulting in a disruption in our operations that could adversely affect our financial condition, business and results of operations. GECM has the right, under the Investment Management Agreement, to resign at any time upon not more than 60 days' written notice, whether we have found a replacement or not. If GECM resigns, we may not be able to find a new investment adviser or hire internal management with similar expertise and ability to provide the same or equivalent services on acceptable terms within 60 days, or at all. If we are unable to do so quickly, our operations are likely to experience a disruption; our financial condition, business and results of operations, as well as our ability to pay distributions are likely to be adversely affected; and the market price of our common stock may decline. In addition, the coordination of our internal management and investment activities is likely to suffer if we are unable to identify and reach an agreement with a single institution or group of executives having the expertise possessed by our investment adviser and its affiliates. Even if we are able to retain comparable management, whether internal or external, the integration of such management and their lack of familiarity with our investment objective and current investment portfolio may result in additional costs and time delays that may adversely affect our financial condition, business and results of operations. We incur significant costs as a result of being a publicly traded company. As a publicly traded company, we incur legal, accounting and other expenses, including costs associated with the periodic reporting requirements applicable to a company whose securities are registered under the Securities Exchange Act of 1934, as amended (the " Exchange Act "), as well as additional corporate governance requirements, including requirements under the Sarbanes-Oxley Act of 2002, the Dodd - Frank Act of 2010 and other rules implemented by our government. Changes in laws or regulations governing our operations may adversely affect our business or cause us to alter our business strategy. We and our portfolio companies are subject to applicable local, state and federal laws and regulations. New legislation may be enacted or new interpretations, rulings or regulations could be adopted, including those governing the types of investments we are permitted to make, any of which could harm us and you, potentially with retroactive effect. Additionally, any changes to the laws and regulations governing our operations relating to permitted investments may cause us to alter our investment strategy in order to avail ourself of new or different opportunities. Such changes could result in material differences to the strategies and plans and may result in our investment focus shifting from the areas of expertise of GECM to other types of investments in which the investment committee may have less expertise or little or no experience. Thus, any such changes, if they occur, could have a material adverse effect on our results of operations. ~~In October 2020, the SEC adopted a revised version of Rule 18f-4, which is designed to modernize the regulation of the use of derivatives by registered investment companies and BDCs. Among other things, Rule 18f-4 limits a fund' s derivatives exposure through a value- at- risk test and requires the adoption and implementation of a derivatives risk management program subject to certain exceptions. Additionally, subject to certain conditions, funds that do not invest heavily in derivatives may be deemed limited derivatives users and are not subject to the full requirements of Rule 18f-4. In connection with the adoption of Rule 18f-4, the SEC also eliminated the asset segregation and cover framework arising from prior SEC guidance for covering derivatives and certain financial instruments. Rule 18f-4 could limit our ability to engage in certain derivatives and other transactions and /or increase the costs of such transactions, which could adversely affect our value or performance.~~ There is, and will be, uncertainty as to the value of our portfolio investments.

Under the Investment Company Act, we are required to carry our portfolio investments at market value or, if there is no readily available market value, at fair value as determined by us in accordance with our written valuation policy, with our Board having final responsibility for overseeing, reviewing and approving, in good faith, our estimate of fair value. Often, there will not be a public market for the securities of the privately held companies in which we invest. As a result, we will value these securities on a quarterly basis at fair value based on input from management, third party independent valuation firms and our audit committee, with the oversight, review and approval of our Board. We consult with an independent valuation firm in valuing all securities in which we invest classified as “ Level 3, ” other than investments which are less than 1 % of NAV as of the applicable quarter end. See “ Management’ s Discussion and Analysis of Financial Condition and Results of Operations — Critical Accounting Policies and Estimates — Valuation of Portfolio Investments. ” The determination of fair value and consequently, the amount of unrealized gains and losses in our portfolio, are subjective and dependent on a valuation process approved and overseen by our Board. Factors that may be considered in determining the fair value of our investments include, among others, estimates of the collectability of the principal and interest on our debt investments and expected realization on our equity investments, as well as external events, such as private mergers, sales and acquisitions involving comparable companies. Because such valuations, and particularly valuations of private securities and private companies and small cap public companies, are inherently uncertain, they may fluctuate over short periods of time and may be based on estimates. Our determinations of fair value may differ materially from the values that would have been used if a ready market for these securities existed. Due to this uncertainty, our fair value determinations may cause our NAV on a given date to materially misstate the value that we may ultimately realize on one or more of our investments. As a result, investors purchasing our securities based on an overstated NAV would pay a higher price than the value of our investments might warrant. Conversely, investors selling securities during a period in which the NAV understates the value of our investments will receive a lower price for their securities than the value of our investments might otherwise warrant. Our financial condition and results of operations depend on our ability to effectively manage and deploy capital. Our ability to achieve our investment objective depends on our ability to effectively manage and deploy capital, which depends, in turn, on GECCM’ s ability to identify, evaluate and monitor, and our ability to finance and invest in, companies that meet our investment criteria. Accomplishing our investment objective on a cost - effective basis is largely a function of GECCM’ s handling of the investment process, its ability to provide competent, attentive and efficient services and its access to investments offering acceptable terms. In addition to monitoring the performance of our existing investments, GECCM may also be called upon, from time to time, to provide managerial assistance to some of our portfolio companies. These demands on their time may distract them or slow the rate of investment. Even if we are able to grow and build out our investment operations, any failure to manage our growth effectively could have a material adverse effect on our business, financial condition, results of operations and prospects. Our results of operations will depend on many factors, including the availability of opportunities for investment, readily accessible short and long - term funding alternatives in the financial markets and economic conditions. We may hold assets in cash or short- term treasury securities in situations where we or GECCM expects downward pricing in the high yield market. Our strategic decision not to be fully invested may, from time to time, reduce funds available for distribution and cause downward pressure on the price of our common stock. The failure in cyber security systems, as well as the occurrence of events unanticipated in our disaster recovery systems and management continuity planning, could impair our ability to conduct business effectively. The occurrence of a disaster such as a cyber - attack, a natural catastrophe, an epidemic or pandemic, an industrial accident, a terrorist attack or war, events anticipated or unanticipated in our disaster recovery systems, or a failure in externally provided data systems, could have an adverse effect on our ability to conduct business and on our results of operations and financial condition, particularly if those events affect our computer - based data processing, transmission, storage and retrieval systems or destroy data. Our ability to effectively conduct our business could be severely compromised. The financial markets we operate in are dependent upon third party data systems to link buyers and sellers and provide pricing information. We depend heavily upon computer systems to perform necessary business functions. Our computer systems could be subject to cyber - attacks and unauthorized access, such as physical and electronic break - ins or unauthorized tampering. Like other companies, we expect to experience threats to our data and systems, including malware and computer virus attacks, unauthorized access, system failures and disruptions. These failures and disruptions may be more likely to occur as a result of employees working remotely. If one or more of these events occurs, it could potentially jeopardize the confidential, proprietary and other information processed and stored in, and transmitted through, our computer systems and networks, or otherwise cause interruptions or malfunctions in our operations, which could result in damage to our reputation, financial losses, litigation, increased costs, regulatory penalties and / or customer dissatisfaction or loss, respectively. Terrorist attacks, acts of war, natural disasters or an epidemic or pandemic may affect the market for our securities, impact the businesses in which we invest and harm our business, operating results and financial condition. Terrorist acts, acts of war, natural disasters or an epidemic or pandemic may disrupt our operations, as well as the operations of the businesses in which we invest. Such acts, including, for example, Russia’ s February 2022 invasion of Ukraine **and conflicts in the Middle East**, have created, and continue to create, economic and political uncertainties and have contributed to global economic instability. Additionally, a public health epidemic or pandemic ~~— including, for example, COVID-19~~, poses the risk that we, GECCM, our portfolio companies or other business partners may be prevented from conducting business activities for an indefinite period of time, including due to shutdowns that may be requested or mandated by governmental authorities. While it is not possible at this time to estimate the impact that any such event could have on our business, the continued occurrence thereof and the measures taken by the governments of countries affected in response thereto could disrupt the supply chain and the manufacture or shipment of products and adversely impact our business, financial condition or results of operations. Future terrorist activities, military or security operations, or natural disasters could further weaken the domestic / global economies and create additional uncertainties, which may negatively impact the businesses in which we invest directly or indirectly and, in turn, could have a material adverse impact on our business, operating results and financial condition. Losses from terrorist attacks and natural

disasters are generally uninsurable. There are significant potential conflicts of interest that could impact our investment returns. Certain of our executive officers and directors, and members of the investment committee of GECM, serve or may serve as officers, directors or principals of other entities, including ICAM or funds managed by ICAM, and affiliates of GECM and investment funds managed by our affiliates. Accordingly, they may have obligations to investors in those entities, the fulfillment of which might not be in our or our stockholders' best interests or that may require them to devote time to services for other entities, which could interfere with the time available to provide services to us. For example, Matt Kaplan, our **President and Chief Executive Officer and President**, is a portfolio manager at GECM and a member of its investment committee. Although funds managed by GECM may have different primary investment objectives than we do, they may from time to time invest in asset classes similar to those targeted by us. GECM is not restricted from raising an investment fund with investment objectives similar to ours. Any such funds may also, from time to time, invest in asset classes similar to those targeted by us. It is possible that we may not be given the opportunity to participate in certain investments made by investment funds managed by investment managers affiliated with GECM. GECM's participation in any negotiated co-investment opportunities (other than those in which the only term negotiated is price) with investment funds managed by investment managers under common control with GECM is subject to compliance with the SEC order dated May 12, 2020 (Release No. 33864). We will pay management and incentive fees to GECM, and will reimburse GECM for certain expenses it incurs. In addition, investors in our common stock will invest on a gross basis and receive distributions on a net basis after expenses, resulting in, among other things, a lower rate of return than one might achieve through direct investments. GECM's management fee is based on a percentage of our total assets (other than cash or cash equivalents but including assets purchased with borrowed funds) and GECM may have conflicts of interest in connection with decisions that could affect our total assets, such as decisions as to whether to incur indebtedness. The part of the incentive fee payable by us that relates to our pre-incentive fee net investment income is computed and paid on income that may include interest that is accrued but not yet received in cash, **but payment is made on such accrual only once corresponding income is received in cash**. If a portfolio company defaults on a loan or note that is structured to provide accrued interest, it is possible that accrued interest previously used in the calculation of the incentive fee will become uncollectible, **which would result in the reversal of any previously accrued and unpaid incentive fees. On April 6, 2022, our Board and the independent directors approved the amendment to the Investment Management Agreement (the "Amendment") to eliminate \$ 163.2 million of realized and unrealized losses incurred prior to April 1, 2022 from the calculation of the Capital Gains Incentive Fee and reset the Capital Gains Commencement Date and the mandatory deferral commencement date, effectively resetting the incentive fee total return hurdle, which was subsequently approved by our stockholders on August 1, 2022**. The Investment Management Agreement renews for successive annual periods if approved by our Board or by the affirmative vote of the holders of a majority of our outstanding voting securities, including, in either case, approval by a majority of our directors who are not interested persons. However, both we and GECM have the right to terminate the agreement without penalty upon 60 days' written notice to the other party. Moreover, conflicts of interest may arise if GECM seeks to change the terms of the Investment Management Agreement, including, for example, the terms for compensation. Pursuant to the Administration Agreement, we pay GECM our allocable portion of overhead and other expenses incurred by GECM in performing its obligations under the Administration Agreement, including our allocable portion of the cost of our Chief Financial Officer and Chief Compliance Officer and their respective staffs. As a result of the arrangements described above, there may be times when our management team has interests that differ from those of our stockholders, giving rise to a conflict. Our stockholders may have conflicting investment, tax and other objectives with respect to their investments in us. The conflicting interests of individual stockholders may relate to or arise from, among other things, the nature of our investments, the structure or the acquisition of our investments, and the timing of disposition of our investments. As a consequence, conflicts of interest may arise in connection with decisions made by GECM, including with respect to the nature or structuring of our investments, that may be more beneficial for one stockholder than for another stockholder, especially with respect to stockholders' individual tax situations. In selecting and structuring investments appropriate for us, GECM will consider the investment and tax objectives of us and our stockholders, as a whole, not the investment, tax or other objectives of any stockholder individually. ~~We are currently operating in a period of capital markets disruption and economic uncertainty and events outside of our control may negatively affect our results of our operations and financial performance. The U. S. capital markets have experienced extreme volatility and disruption following the global outbreak of COVID-19 that began in December 2019. Some economists and major investment banks have expressed concern that the continued spread of the virus globally could lead to a world-wide economic downturn. Disruptions in the capital markets have increased the spread between the yields realized on risk-free and higher risk securities, resulting in illiquidity in parts of the capital markets. These and future market disruptions and / or illiquidity would be expected to have an adverse effect on our business, financial condition, results of operations and cash flows. Unfavorable economic conditions also would be expected to increase our funding costs, limit our access to the capital markets or result in a decision by lenders not to extend credit to us. These events, as well as other events outside of our control, have limited and could continue to limit our investment originations, limit our ability to grow and have a material negative impact on our operating results and the fair values of our debt and equity investments. If the current period of capital market disruption and instability continues for an extended period of time, there is a risk that our stockholders may not receive distributions or that our distributions may not grow over time. We intend to make distributions to our stockholders out of assets legally available for distribution. Stockholders are advised that a distribution does not necessarily indicate a return of profit as such dividends also include a return of capital. We cannot assure you that we will achieve investment results that will allow us to make a specified level of cash distributions or year-to-year increases in distributions. Our ability to pay distributions might be adversely affected by the impact of one or more of the risk factors described in this Annual Report on Form 10-K. For example, decreased access to capital markets could result in reduced cash flows to us from our existing portfolio companies, which could reduce cash available for distribution to our stockholders.~~

~~In addition, due to the asset coverage test applicable to us as a BDC, we may be limited in our ability to make cash distributions. Further, if we invest a greater amount of assets in equity securities that do not pay current dividends, it could reduce the amount available for distribution. The above referenced restrictions on distributions may also inhibit our ability to make required interest payments to holders of our debt, which may cause a default under the terms of our debt agreements. Such a default could materially increase our cost of raising capital, as well as cause us to incur penalties under the terms of our debt agreements.~~

Risks Relating to Our Common Stock A significant portion of our total outstanding shares may be sold into the public market in the near future, which could cause the market price of our common stock to drop significantly, even if our business is doing well. Sales of a substantial number of shares of our common stock in the public market could occur at any time. These sales, or the market perception that the holders of a large number of shares intend to sell shares, could reduce the market price of our common stock. We have registered all of the shares of our common stock held by GEG, which represent approximately 21-20% percent of our outstanding shares of common stock at December 31, 2022-2023. Our common stock price may be volatile and may decrease substantially, and an investor may lose money in connection with an investment in our shares. The trading price of our common stock will likely fluctuate substantially. The price of our common stock may increase or decrease, depending on many factors, some of which are beyond our control and may not be directly related to our operating performance. These factors include, but are not limited to, the following: price and volume fluctuations in the overall stock market from time to time; investor demand for our shares; significant volatility in the market price and trading volume of securities of BDCs or other companies in our sector, which are not necessarily related to the operating performance of these companies; exclusion of our common stock from certain indices, such as the Russell 2000 Financial Services Index, which could reduce the ability of certain investment funds to own our common stock and put short-term selling pressure on our common stock; changes in regulatory policies or tax guidelines with respect to RICs or BDCs; failure to qualify as a RIC, or the loss of RIC status; any shortfall in revenue or net income or any increase in losses from levels expected by investors or securities analysts; changes, or perceived changes, in the value of our portfolio investments; departures of GECC's key personnel; operating performance of companies comparable to GECC; or general economic conditions and trends and other external factors. If the price of shares of our common stock decreases, an investor may lose money if he were to sell his shares of our common stock. In addition, following periods of volatility in the market price of a company's securities, securities class action litigation has often been brought against that company. Due to the potential volatility of the price of our securities, we may become the target of securities litigation in the future. Securities litigation could result in substantial costs and divert management's attention and resources from our business. Provisions of the Maryland General Corporation Law and our organizational documents could deter takeover attempts and have an adverse impact on the prices of our common stock. The Maryland General Corporation Law and our organizational documents contain provisions that may discourage, delay or make more difficult a change in control of GECC or the removal of our directors. We are subject to the Maryland Business Combination Act and the Investment Company Act. If our Board, including a majority of the directors who are not interested persons as defined in the Investment Company Act, does not approve a business combination, the Maryland Business Combination Act may discourage third parties from trying to acquire control of us and increase the difficulty of consummating such an offer. Our Board could amend our bylaws to repeal our current exemption from the Maryland Control Share Acquisition Act. The Maryland Control Share Acquisition Act also may make it more difficult for a third party to obtain control of GECC and increase the difficulty of consummating such a transaction. Our Board is authorized to reclassify any unissued shares of common stock into one or more classes of preferred stock, which could convey special rights and privileges to its owners. Under the Maryland General Corporation Law and our organizational documents, our Board is authorized to classify and reclassify any authorized but unissued shares of stock into one or more classes of stock, including preferred stock. Prior to issuance of shares of each class or series, our Board is required by Maryland law and our charter to set the terms, preferences, conversion or other rights, voting powers, restrictions, limitations as to dividends or other distributions, qualifications and terms or conditions of redemption for each class or series. Thus, our Board could authorize the issuance of shares of preferred stock with terms and conditions which could have the effect of delaying, deferring or preventing a transaction or a change in control that might involve premium prices for holders of our common stock or otherwise be in their best interest. The cost of any such reclassification would be borne by our common stockholders. Certain matters under the Investment Company Act require the separate vote of the holders of any issued and outstanding preferred stock. For example, holders of preferred stock would vote as a separate class from the holders of common stock on a proposal to cease operations as a BDC. In addition, the Investment Company Act provides that holders of preferred stock are entitled to vote separately from holders of common stock to elect two preferred stock directors. The issuance of preferred stock convertible into shares of common stock may also reduce the net income and NAV per share of our common stock upon conversion. These effects, among others, could have an adverse effect on an investment in our common stock. Shares of closed-end investment companies, including BDCs, frequently trade at a discount from their NAV. Shares of closed-end investment companies, including BDCs, frequently trade at a discount from their NAV. This characteristic of closed-end investment companies is separate and distinct from the risk that our NAV per share of common stock may decline. We may, however, sell our common stock, or warrants, options or rights to acquire our common stock, at a price below the then-current NAV per share of our common stock if our Board determines that such sale is in the best interests of GECC and our stockholders approve such sale. In any such case, the price at which our securities are to be issued and sold may not be less than a price that, in the determination of our Board, equals the fair value of such securities (less any distributing commission or discount calculated). If we raise additional funds by issuing more common stock or senior securities convertible into, or exchangeable for, our common stock, then the percentage of our existing stockholders' ownership at that time will decrease, and they may experience dilution. Our stockholders may not receive distributions or our distributions may not grow over time and a portion of our distributions may be a return of capital. We intend to make distributions to our stockholders out of assets legally available for distribution (i. e., not subject to any legal restrictions under Maryland law on the

distribution thereof). We cannot assure you that we will achieve investment results that will allow us to make a specified level of cash distributions or year- to- year increases in cash distributions. Our ability to pay distributions might be adversely affected by the impact of one or more of the risk factors described in this document. Due to the asset coverage test applicable to us under the Investment Company Act as a BDC, we may be limited in our ability to make distributions. When we make distributions, we will be required to determine the extent to which such distributions are paid out of current or accumulated earnings and profits. Distributions in excess of current and accumulated earnings and profits will be treated as a non- taxable return of capital to the extent of an investor' s basis in our stock and, assuming that an investor holds our stock as a capital asset, thereafter as a capital gain. Stockholders who periodically receive the payment of a distribution consisting of a return of capital may be under the impression that they are receiving net profits when they are not. Stockholders should not assume that the source of a distribution from us is net profit. We currently intend to distribute realized net capital gains (i. e., net long term capital gains in excess of short term capital losses), if any, at least annually, we may in the future decide to retain such capital gains for investment and elect to treat such gains as deemed distributions to our stockholders. If this happens, you will be treated as if you had received an actual distribution of the capital gains we retain and reinvested the net after tax proceeds in GECC. In this situation, you would be eligible to claim a tax credit (or, in certain circumstances, a tax refund) equal to your allocable share of the tax we paid on the capital gains deemed distributed to you. Our current intention is to make any distributions in additional shares of our common stock under our dividend reinvestment plan out of assets legally available therefor, unless you elect to receive your distributions and / or long- term capital gains distributions in cash. If you hold shares in the name of a broker or financial intermediary, you should contact the broker or financial intermediary regarding your election to receive distributions in cash. We can offer no assurance that we will achieve results that will permit the payment of any cash distributions and, if we issue senior securities, we will be prohibited from making distributions if doing so causes us to fail to maintain the asset coverage ratios stipulated by the Investment Company Act or if distributions are limited by the terms of any of our borrowings. Stockholders may experience dilution in their ownership percentage if they do not participate in our dividend reinvestment plan. All distributions declared in cash payable to stockholders that are participants in our dividend reinvestment plan are generally automatically reinvested in shares of our common stock. As a result, stockholders that do not participate in the dividend reinvestment plan may experience dilution over time. Stockholders who receive distributions in shares of common stock may experience accretion to the NAV of their shares if our shares are trading at a premium and dilution if our shares are trading at a discount. The level of accretion or discount would depend on various factors, including the proportion of our stockholders who participate in the plan, the level of premium or discount at which our shares are trading and the amount of the distribution payable to a stockholder. Existing stockholders may incur dilution if, in the future, we sell shares of our common stock in one or more offerings at prices below the then current NAV per share of our common stock. The Investment Company Act prohibits us from selling shares of our common stock at a price below the current NAV per share of such stock, with certain exceptions. Our shares might trade at premiums that are unsustainable or at discounts from NAV. Shares of BDCs like us may, during some periods, trade at prices higher than their NAV per share and, during other periods, as frequently occurs with closed- end investment companies, trade at prices lower than their NAV per share. The perceived value of our investment portfolio may be affected by a number of factors including perceived prospects for individual companies we invest in, market conditions for common stock generally, for initial public offerings and other exit events for venture capital backed companies, and the mix of companies in our investment portfolio over time. Negative or unforeseen developments affecting the perceived value of companies in our investment portfolio could result in a decline in the trading price of our common stock relative to our NAV per share. The possibility that our shares will trade at a discount from NAV or at premiums that are unsustainable are risks separate and distinct from the risk that our NAV per share will decrease. The risk of purchasing shares of a BDC that might trade at a discount or unsustainable premium is more pronounced for investors who wish to sell their shares in a relatively short period of time because, for those investors, realization of a gain or loss on their investments is likely to be more dependent upon changes in premium or discount levels than upon increases or decreases in NAV per share. Future offerings of debt securities, which would be senior to our common stock upon liquidation, or equity securities, which could dilute our existing stockholders and may be senior to our common stock for the purposes of distributions, may harm the value of our common stock. In the future, we may attempt to increase our capital resources by making offerings of debt or equity securities, including commercial paper, medium- term notes, senior or subordinated notes and classes of preferred stock or common stock, subject to the restrictions of the Investment Company Act. Upon a liquidation of our company, holders of our debt securities and shares of preferred stock and lenders with respect to other borrowings would receive a distribution of our available assets prior to the holders of our common stock. Additional equity offerings by us may dilute the holdings of our existing stockholders or reduce the value of our common stock, or both. Any preferred stock we may issue would have a preference on distributions that could limit our ability to make distributions to the holders of our common stock. Because our decision to issue securities in any future offering will depend on market conditions and other factors beyond our control, we cannot predict or estimate the amount, timing or nature of our future offerings. Thus, our stockholders bear the risk of our future offerings reducing the market price of our common stock and diluting their stock holdings in us. In addition, proceeds from a sale of common stock will likely be used to increase our total assets or to pay down our borrowings, among other uses. This would increase our asset coverage ratio and permit us to incur additional leverage under rules pertaining to BDCs by increasing our borrowings or issuing senior securities such as preferred stock or additional debt securities. Risks Relating to Indebtedness We may borrow additional money, which would magnify the potential for loss on amounts invested and may increase the risk of investing with us. We have existing indebtedness and may in the future borrow additional money, including borrowings under a Loan Guarantee and Security Agreement, **as amended** (the “ Loan Agreement ”) with City National Bank (“ CNB ”), each of which magnifies the potential for loss on amounts invested and may increase the risk of investing with us. Our ability to service our existing and potential future debt depends largely on our financial performance and is subject to prevailing economic conditions and competitive pressures. The amount of leverage that

we could employ at any particular time will depend on GECM' s and our Board' s assessment of market and other factors at the time of any proposed borrowing. Borrowings, also known as leverage, magnify the potential for gain or loss on amounts invested and, therefore, increase the risks associated with investing in our securities. Holders of such debt securities would have fixed dollar claims on our consolidated assets that would be superior to the claims of our common stockholders or any preferred stockholders. If the value of our consolidated assets decreases while we have debt outstanding, leveraging would cause our NAV to decline more sharply than it otherwise would have had we not leveraged. Similarly, any decrease in our consolidated income while we have debt outstanding would cause net income to decline more sharply than it would have had we not borrowed. Such a decline could negatively affect our ability to make common stock distributions. We cannot assure you that our leveraging strategy will be successful. Illustration. The following tables illustrate the effect of leverage on returns from an investment in our common stock assuming various annual returns, net of expenses. The first table assumes the actual amount of senior securities outstanding as of December 31, 2022-2023. The second table assumes the maximum amount of senior securities outstanding as permitted under our asset coverage ratio of 150 %. See "Selected Risks Associated with Our Business — We may incur additional debt." The calculations in the tables below are hypothetical and actual returns may be higher or lower than those appearing below. Table 1 Assumed Return on Our Portfolio (1) (2) (net of expenses) (10. 0) % (5. 0) % 0. 0 % 5. 0 % 10. 0 % Corresponding net return to common stockholder (14. 46-32) % (9. 46-32) % (4. 46-32) % 0. 54-68 % 5. 54-68 % Assumes \$ 225-230. 0-6 million in total portfolio assets, excluding short term investments, \$ 155-143. 9-1 million in senior securities outstanding, \$ 84-98. 8-7 million in net assets, and an average cost of funds of 6. 43-96 % . Actual interest payments may be different. In order for us to cover our annual interest payments on indebtedness, we must achieve annual returns on our December 31, 2022-2023 total portfolio assets of at least 4. 46-32 % . Table 2 Assumed Return on Our Portfolio (1) (2) (net of expenses) (10. 0) % (5. 0) % 0. 0 % 5. 0 % 10. 0 % Corresponding net return to common stockholder (14. 57-82) % (9. 57-82) % (4. 57-82) % 0. 43-18 % 5. 43-18 % Assumes \$ 238-285. 6-0 million in total portfolio assets, excluding short term investments, \$ 169-197. 6-5 million in senior securities outstanding, \$ 84-98. 8-7 million in net assets, and an average cost of funds of 6. 43-96 % . Actual interest payments may be different. In order for us to cover our annual interest payments on indebtedness, we must achieve annual returns on our December 31, 2022-2023 total portfolio assets of at least 4. 57-82 % . Incurring additional indebtedness could increase the risk in investing in our Company. In 2018, our stockholders approved of the reduction of our required minimum asset coverage ratio from 200 % to 150 %, permitting us to incur additional leverage. The use of leverage magnifies the potential for gain or loss on amounts invested. The use of leverage is generally considered a speculative investment technique and increases the risks associated with investing in our securities. As of December 31, 2022-2023, we had approximately \$ 155-143. 9-1 million of total outstanding indebtedness in the aggregate under a senior secured revolving line of credit and three series of senior securities (unsecured notes) — the GECCM Notes, the GECCN-GECCO Notes and the GECCO-GECCZ Notes (each as defined herein) — and our asset coverage ratio was 154-169. 4-0 % . On May 5, 2021, we entered into the Loan Agreement, which provides for a senior secured revolving line of credit of up to \$ 25 million (subject to a borrowing base). As of December 31, 2022-2023, there were no \$ 10. 0 million in borrowings outstanding under the revolving line. We may request to increase the revolving line in an aggregate amount not to exceed \$ 25 million, which increase is subject to the sole discretion of CNB. Holders of our GECCM Notes, GECCN Notes and GECCO Notes have fixed dollar claims on our assets that are superior to the claims of our common stockholders, and such holders may seek to recover against our assets in the event of a default. If we are unable to meet the financial obligations under any of the Loan Agreement or any series of our outstanding unsecured notes, the holders of such indebtedness would have a superior claim to our assets over our common stockholders, and the lenders or noteholders may seek to recover against our assets in the event of a default by us. If the value of our assets decreases, leveraging would cause NAV to decline more sharply than it otherwise would have had we not leveraged, thereby magnifying losses. Similarly, any decrease in our revenue or income will cause our net income to decline more sharply than it would have had we not borrowed. Such a decline would also negatively affect our ability to make distributions with respect to our common stock. Our ability to service any debt depends largely on our financial performance and is subject to prevailing economic conditions and competitive pressures. Moreover, as the base management fee payable to GECM, our investment advisor, is payable based on the average value of our total assets, including those assets acquired through the use of leverage, GECM will have a financial incentive to incur leverage, which may not be consistent with our stockholders' interests. In addition, our common stockholders bear the burden of any increase in our fees or expenses as a result of our use of leverage, including interest expenses and any increase in the base management fee payable to GECM. If our asset coverage ratio falls below the required limit, we will not be able to incur additional debt until we are able to comply with the asset coverage ratio applicable to us. This could have a material adverse effect on our operations, and we may not be able to make distributions to stockholders. The actual amount of leverage that we employ will depend on GECM' s and our Board' s assessment of market and other factors at the time of any proposed borrowing. We cannot assure you that we will be able to obtain credit at all or on terms acceptable to us. Incurring additional leverage may magnify our exposure to risks associated with changes in interest rates, including fluctuations in interest rates which could adversely affect our profitability. If we incur additional leverage, general interest rate fluctuations may have a more significant negative impact on our financial condition and results of operations than they would have absent such additional incurrence, and, accordingly, may have a material adverse effect on our investment objectives and rate of return on investment capital. A portion of our income will depend upon the difference between the rate at which we borrow funds and the interest rate on the debt securities in which we invest. Because we may borrow money to make investments and may issue debt securities, preferred stock or other securities, our net investment income is dependent upon the difference between the rate at which we borrow funds or pay interest or dividends on such debt securities, preferred stock or other securities and the rate at which we invest these borrowed funds. We expect that a majority of our investments in debt will continue to be at floating rates with a floor. As a result, significant increase in market interest rates could result in an increase in our non- performing assets and a decrease in the value of our portfolio because our floating- rate

loan portfolio companies may be unable to meet higher payment obligations. In periods of rising interest rates, our cost of funds would increase, resulting in a decrease in our net investment income. Incurring additional leverage will magnify the impact of an increase to our cost of funds. In addition, a decrease in interest rates may reduce net income, because new investments may be made at lower rates despite the increased demand for our capital that the decrease in interest rates may produce. To the extent our additional borrowings are in fixed- rate instruments, we may be required to invest in higher- yield securities in order to cover our interest expense and maintain our current level of return to stockholders, which may increase the risk of an investment in our securities.
