Legend: New Text Removed Text Unchanged Text Moved Text Section

Investing in our common stock involves a high degree of risk. You should carefully consider the risks described below, as well as the other information in this Annual Report on Form 10-K, including our financial statements and the related notes and " Management's Discussion and Analysis of Financial Condition and Results of Operations," before deciding whether to invest in our common stock. The occurrence of any of the events or developments described below could harm our business, financial condition, results of operations and growth prospects. In such an event, the market price of our common stock could decline and you may lose all or part of your investment. Additional risks and uncertainties not presently known to us or that we currently deem immaterial also may impair our business operations. Risks Related to Our Financial Position and Capital NeedsWe-Needs We are a clinical - stage biopharmaceutical company with no approved products and a limited operating history. We have incurred significant losses since inception. We expect to incur losses for at least the next several years and may never achieve or maintain profitability. We are a clinical stage biopharmaceutical company with no approved products and a limited operating history. Investment in biopharmaceutical product development is highly speculative because it entails substantial upfront capital expenditures and significant risk that any potential product candidate will fail to demonstrate adequate efficacy or an acceptable safety profile, gain regulatory approval and become commercially viable. We have no products approved for commercial sale and have not generated any revenue from product sales. To date, we have devoted substantially all of our resources to organizing and staffing our company, business planning, raising capital, undertaking preclinical studies and clinical trials of our product candidates, securing related intellectual property rights and conducting discovery, research and development activities for our programs. As a result, we are not profitable and have incurred losses in each period since our inception in 2011. For the years ended December 31, 2021 and 2022 and 2023, we reported a net loss of \$ 75. 7 million and \$ 64. 9 million and \$ 81. 6 million , respectively. As of December 31, 2022-2023, we had an accumulated deficit of \$ 287-369. 7-3 million. We expect to continue to incur significant losses for the foreseeable future. We anticipate that our expenses will increase substantially if, and as, we: • pursue the clinical and preclinical development of our current and future product candidates; • leverage our technologies to advance product candidates into preclinical and clinical development; • seek regulatory approvals for product candidates that successfully complete clinical trials, if any; • attract, hire, and retain additional clinical, quality control and scientific personnel; • expand our operational, financial and management systems and increase personnel, including personnel to support our clinical development, manufacturing and commercialization efforts and our operations as a public company; • establish our manufacturing capabilities through third parties or by ourselves and scale- up manufacturing to provide adequate supply for clinical trials and commercialization; • expand and protect our intellectual property portfolio; • establish a sales, marketing, medical affairs and distribution infrastructure to commercialize any products for which we may obtain marketing approval and intend to commercialize on our own or jointly; • acquire or in-license other product candidates and technologies. Even if we succeed in commercializing one or more of our product candidates, we will continue to incur substantial research and development and other expenditures to develop and market additional product candidates and we may never generate revenue that is significant or large enough to achieve profitability. We may also encounter unforeseen expenses, difficulties, complications, delays and other unknown factors that may adversely affect our business. The size of our future net losses will depend, in part, on the rate of future growth of our expenses and our ability to generate revenue. Our prior losses and expected future losses have had and will continue to have an adverse effect on our stockholders' equity and working capital. 661f-If we do achieve profitability, we may not be able to sustain or increase profitability on a quarterly or annual basis. Accordingly, our failure to become and remain profitable would decrease the value of our company and could impair our ability to raise capital, maintain our research and development efforts, expand our business or continue our operations. A decline in the value of our company also could cause you to lose all or part of your investment. We will require substantial additional financing and a failure to obtain this necessary capital when needed on acceptable terms, or at all, could force us to delay, limit, reduce or terminate our product development programs, commercialization efforts or other operations. Since our inception, we have invested a significant portion of our efforts and financial resources in research and development activities for our nonreplicating and replicating technologies and our product candidates derived from these technologies. Preclinical studies and clinical trials and additional research and development activities will require substantial funds to complete. We believe that we will continue to expend substantial resources for the foreseeable future in connection with the development of our current product candidates and programs, any future product candidates we may choose to pursue, when we begin to develop our own manufacturing capabilities and other corporate uses. These expenditures will include costs associated with conducting preclinical studies and clinical trials, obtaining regulatory approvals, and manufacturing and supply, as well as marketing and selling any products approved for sale. Our expenses could increase beyond our current expectations if other unanticipated costs arise or if the FDA, the EMA, or other comparable foreign regulatory authorities requires us to perform clinical trials and other studies in addition to those that we currently anticipate. Because the outcome of any preclinical study or clinical trial is highly uncertain, we cannot reasonably estimate the actual amounts necessary to successfully complete the development and commercialization of our current or future product candidates. If we are unable to raise capital when needed or on acceptable terms, we would be forced to delay, reduce or terminate our research and development programs or future commercialization efforts. As of December 31, 2022-2023, we had approximately \$ 113-117. 45 million in cash, cash equivalents and restricted cash. Based on our research and development plans, we expect that our existing cash and cash equivalents at December 31, 2022 2023, together with the funds-payment we expect to received received under prior to the termination of Restated Gilead

```
Collaboration Agreement in January 2023 and the funds we received under the Roche Collaboration Agreement in March April
<del>2023-</del>2024, will <del>enable 63enable</del> us to fund our operating expenses and capital expenditure requirements for at least the next 12
months. This estimate is based on assumptions that may prove to be wrong, and we could use our available capital resources
sooner than we expect. Changes may occur beyond our control that would cause us to consume our available capital before that
time, including changes in and progress of our development activities and changes in regulation. Our future capital requirements
depend on many factors, including: • the scope, progress, results and costs of researching and developing our current and future
product candidates and programs, and of conducting preclinical studies and clinical trials; • the number and development
requirements of other product candidates that we may pursue, and other indications for our current product candidates that we
may pursue; o our ability to achieve efficiencies and expected cost reductions in connection with our recent strategic
refocus; • the stability, scale and yields of our future manufacturing process as we scale scaleup - up production and
formulation of our product candidates for later stages of development and commercialization; • the timing of, and the costs
involved in, obtaining regulatory and marketing approvals and developing our ability to establish sales and marketing
capabilities, if any, for our current and future product candidates we develop if clinical trials are successful; • the success of our
collaborations with Gilead and Roche; • our ability to establish and maintain collaborations, strategic licensing or other
arrangements and the financial terms of such agreements . For example, in January 2024 Roche notified us of their decision
to terminate their collaboration agreement with us; 67.0 the cost of commercialization activities for our current and future
product candidates that we may develop, whether alone or with a collaborator; • the costs involved in preparing, filing,
prosecuting, maintaining, expanding, defending and enforcing patent claims, including litigation costs and the outcome of such
litigation; • the timing, receipt and amount of sales of, or royalties on, our future products, if any; and • the emergence of
competing oncology and infectious disease therapies and other adverse market developments. We Other than the Stock
Purchase Agreement and our collaboration agreements with Gilead, we do not have any committed external source of funds
or other support for our development efforts. Raising additional capital may cause dilution to our stockholders, restrict our
operations or require us to relinquish proprietary rights. Until we can generate sufficient product and royalty revenue to finance
our cash requirements, which we may never do, we expect to finance our future cash needs through a combination of public or
private equity offerings, debt financings, collaborations, strategic alliances, licensing arrangements and other marketing or
distribution arrangements and grant funding. If we raise additional capital through public or private equity offerings, the terms
of these securities may include liquidation or other preferences that adversely affect our stockholders' rights. Further, to the
extent that we raise additional capital through the sale of common stock or securities convertible or exchangeable into common
stock, your ownership 64ownership interest will be diluted. For example, in December 2023 we entered into an Amended
and Restated Stock Purchase Agreement with Gilead pursuant to which we issued and sold 15, 000, 000 shares of
unregistered common stock to Gilead for approximately $ 21, 25 million, and we may require Gilead to purchase up to
approximately $ 8. 75 million of additional share of common stock. In addition, in May 2023 we completed a public
offering in which we issued and sold 22, 900, 768 shares of common stock and 15, 268 shares of Series A- 2 convertible
preferred stock, which are convertible into common stock on a 1, 000 to one basis, pursuant to our shelf registration
statement on Form S-3 (File No. 333- 266104) for net proceeds of $ 46.3 million. If we raise additional capital through debt
financing, we would be subject to fixed payment obligations and may be subject to covenants limiting or restricting our ability to
take specific actions, such as incurring additional debt, making capital expenditures or declaring dividends. If we raise
additional capital through marketing and distribution arrangements or other collaborations, strategic alliances or licensing
arrangements with third parties, we may have to relinquish certain valuable rights to our product candidates, technologies, future
revenue streams or research programs or grant licenses on terms that may not be favorable to us. If we are unable to raise
additional funds through equity or debt financings when needed, we may be required to delay, reduce or terminate our product
development or future commercialization efforts or grant rights to third parties to develop and market product candidates that we
would otherwise prefer to develop and market ourselves. If we engage in future acquisitions or strategic partnerships, this may
increase our capital requirements, dilute our stockholders if we issue equity securities, cause us to incur debt or assume
contingent liabilities, and subject us to other risks. We may evaluate various acquisitions and strategic partnerships, including
acquiring complementary products, intellectual property rights, technologies, or businesses. Any potential acquisition or
strategic partnership may entail numerous risks, including: • increased operating expenses and cash requirements; • the
assumption of additional indebtedness or contingent liabilities; • the issuance of our equity securities; • assimilation of
operations, intellectual property and products of an acquired company, including difficulties associated with integration; 68.
the diversion of our management's attention from our existing product programs and initiatives in pursuing such a strategic
merger or acquisition; • retention of key employees, the loss of key personnel, and uncertainties in our ability to maintain key
business relationships; • risks and uncertainties associated with the other party to such a transaction, including the prospects of
that party and their existing products or product candidates and regulatory approvals; and ● our inability to generate revenue
from acquired technology or products sufficient to meet our objectives in undertaking the acquisition. In addition, if we
undertake acquisitions, we may incur large one-time expenses and acquire intangible assets that could result in significant
future amortization expense. We 65We have obtained funding from an agency of the Austrian government that contains certain
covenants that may restrict our operations. In the past, we have contracted numerous funding agreements with an agency of the
Austrian government to partially finance our research and development programs, such as personnel costs, material costs, third-
party services, travel expenses and research and development infrastructure use. These funding agreements include both below
market rate loans and grants, which are subject to various criteria linked to certain terms and conditions as well as certain costs
attributable to the respective funded research and development program. We have committed to reporting obligations and to
obtain the approval for significant changes in the cost structure of the funded research and development programs. If we were to
breach these contractual obligations, we may be held liable by the agency of the Austrian government for damages incurred by
```

```
such agencies resulting from the breach of contract and we could be required to reimburse in full the funding granted by such
agencies. Further, pursuant to the general terms of each grant, the agency is entitled to re- evaluate the funding granted to us in
case of a fundamental change in our ownership structure if such change no longer ensures that the purpose of the funding can be
achieved. Any such re- evaluation could negatively impact the funding that we receive or have received from the agency or that
we may receive in the future from other agencies of the Austrian government. Risks Related to Our Business and IndustryIf we
are unable to advance our current or future product candidates into and through clinical trials, obtain marketing approval and
ultimately commercialize any product candidates we develop, or experience significant delays in doing so, our business will be
materially harmed. All of our product candidates are in early stages of development, including our lead product eandidates-
candidate, HB- 200 201 and HB- 202, which are is currently in a Phase 1 / 2 clinical trial, and as such will require extensive
preclinical and clinical testing. We cannot predict with any certainty if or when we might submit an IND, or BLA, or
comparable foreign applications, for regulatory approval for any of our product candidates or whether any such IND or BLA,
or comparable foreign applications, will be accepted for review by the FDA or comparable foreign regulatory authority,
or subsequently whether any such IND will go into effect or BLA will be approved upon review, or whether comparable
foreign applications will fulfill the related milestones. We may encounter unforeseen expenses, difficulties, complications,
delays and other known or unknown factors in achieving our business objectives. For example, we recently announced a
strategic refocus to prioritize clinical development of HB- 200 for the treatment of HPV16 head and neck cancers and
Gilead- partnered programs in infectious disease and to pause development activities related to HB- 300 and most other
preclinical research activities. In connection with this strategic refocus, we implemented an approximately 30 %
reduction in our workforce and discontinued our GMP manufacturing facility project. In addition, in January 2024
Roche notified us of their decision to terminate the collaboration and licensing agreement for HB-700 in KRAS mutated
cancers, despite acknowledging we had met all go- forward criteria under the agreement. Our ability to generate product
revenues, which we do not expect to occur for several years, if ever, will depend heavily on the successful development and
eventual commercialization of the product candidates we develop, which may never occur. Before we are able to generate any
revenues from product sales, our current product candidates, and any future product candidates we develop, will require
additional preclinical and clinical development, management of clinical, preclinical and manufacturing activities, marketing
approval in the United States and other markets, demonstrating effectiveness to pricing and reimbursement authorities, obtaining
sufficient manufacturing supply for both clinical development and commercial production, building of a commercial
organization, and substantial investment and 69significant -- significant marketing efforts. The success of our current and future
product candidates will depend on several factors, including the following: • successful completion of preclinical studies and
clinical trials: 66 • sufficiency of our financial and other resources to complete the necessary preclinical studies and clinical
trials; • acceptance of INDs and comparable foreign applications for our planned clinical trials or future clinical trials; •
successful enrollment and completion of clinical trials; • successful data from our clinical program that support an acceptable
risk-benefit profile of our product candidates in the intended populations; • receipt and maintenance of regulatory and
marketing approvals from applicable regulatory authorities; • scale- up of our manufacturing processes and formulation of our
product candidates for later stages of development and commercialization; • establishing our own manufacturing capabilities or
agreements with third- party manufacturers for clinical supply for our clinical trials and commercial manufacturing, if our
product candidates are approved; • entry into collaborations to further the development of our product candidates; • obtaining
and maintaining patent and trade secret protection or regulatory exclusivity for our product candidates; • successfully launching
commercial sales of our product candidates, if and when approved; • acceptance of the product candidate's benefits and uses, if
and when approved, by patients, the medical community and third-party payors; • the prevalence and severity of adverse
events experienced with our product candidates; • maintaining a continued acceptable safety profile of the product candidates
following approval; • effectively competing with other therapies; • obtaining and maintaining healthcare coverage and adequate
reimbursement from third- party payors; and • qualifying for, maintaining, enforcing and defending intellectual property rights
and claims. We do not have complete control over many of these factors, including certain aspects of clinical development and
the regulatory submission process, potential threats to our intellectual property rights and the manufacturing, marketing,
distribution and sales efforts of any future collaborator. If we are not successful with respect to one or more of these factors in a
timely manner or at all, we could experience significant delays or an inability to successfully commercialize the product
candidates we develop, which would materially harm our business. 70The regulatory approval processes of the FDA, the
EMA and the European Commission and other comparable foreign regulatory authorities are lengthy, time- consuming and
inherently unpredictable, and if we are ultimately unable to obtain regulatory approval for our product candidates, our business
will be substantially harmed. The time required to obtain approval from the FDA, the <del>EMA <mark>European Commission</mark> a</del>nd other
comparable foreign regulatory authorities is unpredictable, but typically takes many years following the commencement of
clinical trials and depends upon numerous factors, including the substantial discretion of the regulatory authorities. In addition,
approval policies 67policies, regulations, or the type and amount of clinical data necessary to gain approval may change during
the course of a product candidate's clinical development and may vary among jurisdictions. We have not obtained regulatory
approval for any product candidate, and it is possible that none of our current or future product candidates will ever obtain
regulatory approval. Our current and future product candidates could fail to receive regulatory approval for many reasons,
including the following: • the FDA, the EMA or other comparable foreign regulatory authorities may disagree with the design
or implementation of our clinical trials; • we may be unable to demonstrate to the satisfaction of the FDA, the EMA or the
European Commission or other comparable foreign regulatory authorities that a product candidate is safe, pure and potent or
effective for its proposed indication; • the results of clinical trials may not meet the level of statistical significance required by
the FDA, the EMA and the European Commission or other comparable foreign regulatory authorities for approval; • we may
be unable to demonstrate that a product candidate's clinical and other benefits outweigh its safety risks; • the FDA, the EMA
```

or **the European Commission or** other comparable foreign regulatory authorities may disagree with our interpretation of data from clinical trials or preclinical studies; • the data collected from clinical trials of our product candidates may not be sufficient to support the submission of a BLA to the FDA, or similar foreign submission to the EMA or other comparable foreign regulatory authority, or to obtain approval in the United States, the European Union or elsewhere; • the supply or quality of materials for product candidates we develop or other materials necessary to conduct clinical trials may be insufficient or inadequate; • the FDA, the EMA the European Commission, competent authorities of EU Member States or other comparable foreign regulatory authorities may , as applicable, find deficiencies with or fail to approve the manufacturing processes or facilities of third- party manufacturers with which we contract for clinical and commercial supplies; and • the approval policies or regulations of the FDA, the EMA and the European Commission or other comparable foreign regulatory authorities may significantly change in a manner rendering our clinical data insufficient for approval. This lengthy approval process as well as the unpredictability of clinical trial results may result in our failing to obtain regulatory approval to market any product candidate we develop, which would significantly harm our business, results of operations and prospects. We have conducted, and intend to conduct, clinical trials of certain of our product candidates outside the United States. Although the FDA may accept data from clinical trials conducted outside the United States, acceptance of this data is subject to certain conditions imposed by the FDA, including compliance with all applicable U. S. laws and regulations. For example, the clinical trial must be well designed and conducted and performed by qualified investigators 71 in in accordance with GCP, including review and approval by an independent ethics committee and informed consent from subjects. The study population must also adequately represent the U. S. population, and the data must be applicable to the U. S. population and U. S. medical practice in ways that the FDA deems clinically meaningful. In general, the patient population for any clinical trials conducted outside of the United States must be representative of the population for whom we intend to label the product in the United States. There can be no assurance the FDA will accept data from trials 68conducted outside of the United States. Comparable risks apply abroad in relation to the data that was generated in the United States which we intend to leverage for purposes of obtaining regulatory authorizations abroad. There can be no assurance that foreign regulatory authorities will accept <mark>data from trials</mark> conducted outside of the <mark>their territory United States. The FDA, the EMA **and the European Commission**</mark> and other comparable foreign regulatory authorities have substantial discretion in the approval process and determining when or whether regulatory approval will be obtained for any product candidate that we develop. Even if we believe the data collected from future clinical trials of our product candidates are promising, such data may not be sufficient to support approval by the FDA, the EMA European Commission or any other comparable foreign regulatory authorities. Even if we were to obtain approval, regulatory authorities may approve any of our product candidates for fewer or more limited indications than we request, may not approve the price we intend to charge for our products, may grant approval contingent on the performance of costly post- marketing clinical trials, or may approve a product candidate with a label that does not include the labeling claims necessary or desirable for the successful commercialization of that product candidate. Any of the foregoing scenarios could materially harm the commercial prospects for our product candidates. Our clinical trials may fail to demonstrate adequately the safety and efficacy of any of our product candidates, which would prevent or delay regulatory approval and commercialization. Before obtaining regulatory approvals for the commercial sale of our product candidates, including HB-200, HB-201, HB-202, HB-300, HB-400, HB-500, HB-700 and any other future product candidates, we must demonstrate through lengthy, complex and expensive preclinical testing and clinical trials that our product candidates are both safe and effective for use in each target indication. Clinical testing is expensive and can take many years to complete, and its outcome is inherently uncertain. Failure can occur at any time during the clinical trial process, and, because our product candidates are in an early stage of development, there is a high risk of failure and we may never succeed in developing marketable products. Clinical trials that we may conduct may not demonstrate the efficacy and safety necessary to obtain regulatory approval to market our product candidates. In some instances, there can be significant variability in safety or efficacy results between different clinical trials of the same product candidate due to numerous factors, including changes in trial procedures set forth in protocols, differences in the size and type of the patient populations, changes in and adherence to the clinical trial protocols and the rate of dropout among clinical trial participants. If the results of our ongoing or future clinical trials are inconclusive with respect to the efficacy of our product candidates, if we do not meet the clinical endpoints with statistical and clinically meaningful significance, or if there are safety concerns associated with our product candidates, we may be delayed in obtaining marketing approval, if at all. Any inability to successfully complete preclinical and clinical development could result in additional costs to us or impair our ability to generate revenue from future drug sales and regulatory and commercialization milestones. Clinical trial delays could also shorten any periods during which we may have the exclusive right to commercialize our product candidates, if approved, or allow our competitors to bring comparable products to market before we do, which could impair our ability to successfully commercialize our product candidates and may harm our business, financial condition, results of operations and prospects. Even if the trials are successfully completed, clinical data are often susceptible to varying interpretations and analyses, and we cannot guarantee that the FDA, the EMA and the European Commission, or other comparable foreign regulatory authorities will interpret the results as we do, and more trials could be required before we submit our product candidates for approval. We cannot guarantee that the FDA, the EMA and the European Commission or other comparable foreign regulatory authorities will view our product candidates as having efficacy even if positive results are observed in our planned-clinical trials. To the extent that the results of the trials are not satisfactory to the FDA, the EMA and the European Commission or other comparable foreign regulatory authorities for support of a marketing application, approval of our product candidates may be significantly delayed, or we may be 72required -- required to expend significant additional resources, which may not be available to us, to conduct additional trials in support of potential approval of our product candidates. Our preclinical programs may experience delays or our product candidates may never advance to clinical trials, which would adversely affect our ability to obtain regulatory approvals or commercialize these product candidates on a timely basis or at all, which would

have an adverse effect on our business. Certain of our product candidates and all of our next generation product candidates are still in the preclinical development stage, and the risk of failure of preclinical programs is high. Before we can commence clinical trials for a product candidate, we must complete extensive preclinical testing and studies to obtain regulatory clearance to initiate human clinical trials, including based on INDs in the United States and clinical trial applications in Europe. We cannot be certain of the timely completion or outcome of our preclinical testing and studies and cannot predict if the FDA, the EMA competent authorities of EU Member States or other regulatory authorities will accept our proposed clinical programs or if the outcome of our preclinical testing and studies will ultimately support the further development of our product candidates. As a result, we cannot be sure that submission of INDs or similar applications will result in the FDA, the EMA competent authorities of EU Member States or other comparable foreign regulatory authorities allowing clinical trials to begin. We have in the past, and may in the future, encounter challenges in collecting, transporting and analyzing clinical blood samples, which could cause delays or prevent the approval of our drug candidates. Interim, top line and preliminary data from our clinical trials that we announce or publish from time to time may change as more patient data become available and are subject to regulatory audit and verification procedures that could result in material changes in the final data. From time to time, we may publish interim, top line or preliminary data from our clinical trials. We may decide to conduct an interim analysis of the data after a certain number or percentage of patients have been enrolled, or after only a part of the full follow- up period but before completion of the trial. Similarly, we may report top line or preliminary results of primary and key secondary endpoints before the final trial results are completed. Preliminary, top line and interim data from our clinical trials may change as more patient data or analyses become available. Preliminary, top line or interim data from our clinical trials are not necessarily predictive of final results and are subject to the risk that one or more of the clinical outcomes may materially change as patient enrollment continues, more patient data become available, and we issue our final clinical trial report. These data also remain subject to verification procedures that may result in the final data being materially different from the preliminary data we previously published. As a result, preliminary, interim and top line data should be viewed with caution until the final data are available. Material adverse changes in the final data compared to the interim data could significantly harm our business prospects. Further, others, including regulatory agencies, may not accept or agree with our interim, topline or preliminary analyses or may interpret or weigh the importance of data differently, which could impact the value of the particular program, the approvability or commercialization of the particular product candidate and our company in general. In addition, the information we choose to publicly disclose regarding a particular study or clinical trial is based on what is typically extensive information, and you or others may not agree with what we determine is material or otherwise appropriate information to include in our disclosure. Results of earlier studies and trials of our product candidates may not be predictive of future trial results. Success in preclinical studies and early clinical trials does not ensure that later clinical trials will be successful. Product candidates in later stages of clinical trials may fail to show the desired safety and efficacy traits despite having progressed through preclinical studies and initial clinical trials. Even if we are able to commence clinical trials, issues may arise that could suspend or terminate such clinical trials. A number of companies in the biotechnology and pharmaceutical industries have suffered significant setbacks in clinical trials, even after positive results in earlier preclinical studies or clinical trials. These setbacks have been caused by, among other things, preclinical findings made while clinical trials were underway and safety or efficacy observations made in clinical trials, including previously unreported adverse events. Notwithstanding any potential promising results in earlier studies and trials, we cannot be certain that we will not face similar setbacks. In addition, the results of our preclinical animal studies, including our 73oncology -- oncology mouse studies and animal studies, may not be predictive of the results of outcomes in human clinical trials. For example, our oncology product candidates that are in preclinical development may demonstrate different chemical and biological 70biological properties in patients than they do in laboratory animal studies or may interact with human biological systems in unforeseen or harmful ways. Our replicating technology is early in clinical development and could therefore prove to be unsafe. Our replicating technology is an attenuated viral vector technology which is in a Phase 1/2 clinical trial. If our ongoing Phase 1 / 2 clinical trial for HB- 200 201 and HB- 202 / HB- 201 causes unexpected side effects that are not tolerable in the treatment of the relevant patient group, the further development of the product candidate and any other potential products based on the replicating technology may be significantly limited or become impossible. Although clinical trials of onco- viral therapies have supported their role as a potential treatment for cancer, there is the risk of uncontrolled replication in vivo and possible transmission to patients' contacts, such as other patients and health care workers. In recent years, clinical trials to address these concerns have been conducted. Any such transmission by our product candidates or a competitor would have an adverse impact on our future research and development efforts. Our product candidates are based on a novel approach to the treatment of cancer, which makes it difficult to predict the time and cost of product candidate development. We have concentrated all of our research and development efforts on product candidates based on our non-replicating and replicating technologies, and our future success depends on the successful development of this therapeutic approach. Our non-replicating and replicating technologies utilize arenaviruses to activate CD8 T cells and induce pathogen- neutralizing antibodies. There are no approved products that utilize the arenavirus. Because our non- replicating and replicating technologies are novel, regulatory agencies may lack experience with product candidates which may lengthen the regulatory review process, increase our development costs and delay or prevent commercialization of our product candidates. We have not yet succeeded and may not succeed in demonstrating safety and efficacy for any of our product candidates in ongoing or late- stage clinical trials or in obtaining marketing approval thereafter. In addition, our vectors are live, genemodified organisms for which the FDA, the EMA-EU and other comparable foreign regulatory authorities and other public health authorities, such as the Centers of Disease Control and Prevention and hospitals involved in clinical studies, have established additional safety and contagion rules and procedures, which could establish additional hurdles for the development, manufacture or use of our vectors. These hurdles may lead to delays in the conduct of clinical trials or in obtaining regulatory approvals for further development, manufacturing or commercialization of our product candidates. We may also experience

delays in transferring our process to commercial partners, which may prevent us from completing our clinical trials or commercializing our product candidates on a timely or profitable basis, if at all. Since the number of patients that we plan to dose in some of our planned clinical trials is small, the results from such clinical trials, once completed, may be less reliable than results achieved in larger clinical trials, which may hinder our efforts to obtain regulatory approval for our product candidates. A trial design that is considered appropriate for regulatory approval includes a sufficiently large sample size with appropriate statistical power, as well as proper control of bias, to allow a meaningful interpretation of the results. In the Phase 2 portion of our Phase 1 / 2 trial for HB - 200 in combination with pembrolizumab, we expect to enroll two groups of 10 to 20 patients each and. future Future trials for HB - 200 or other product candidates may similarly enroll a small number of patients although some trials will require the enrollment of more patients. The preliminary results of trials with smaller sample sizes can be disproportionately influenced by the impact the treatment had on a few individuals, which limits the ability to generalize the results across a broader community, making the trial results less reliable than trials with a larger number of patients. As a result, there may be less certainty that such product candidates would achieve a statistically significant effect in any future clinical trials. If we conduct any future clinical trials, we may not achieve a statistically significant result or the same level of statistical significance, if any, that would have been possible to achieve in a larger trial. 740ur product candidates may cause serious adverse events, undesirable side effects or have other properties that could halt their clinical development, prevent their regulatory approval, require expansion of the trial size, limit their commercial potential or result in significant negative consequences. Undesirable side effects caused by our product candidates could cause us or regulatory authorities, including IRBs or ethics committees, to interrupt, delay or halt clinical trials and could result in a more restrictive label or the delay or denial of regulatory approval by the FDA, the EMA-European Commission or other comparable foreign regulatory authorities. Further, clinical trials by their nature utilize a sample of the potential patient population. With a limited number of subjects and limited duration of exposure, rare and severe side effects of our product candidates may only be uncovered with a significantly larger number of patients exposed to the drug. Because of our dose escalation design for our clinical trials, undesirable side effects could also result in an expansion in the size of our clinical trials, increasing the expected costs and timeline of our clinical trials. Additionally, results of our trials could reveal a high and unacceptable severity and prevalence of side effects or unexpected characteristics. If we do observe severe side effects in our clinical trials, our ongoing clinical trials may be halted or put on clinical hold prior to completion if there is an unacceptable safety risk for patients. If unacceptable toxicities arise in the development of our product candidates, we could suspend or terminate our trials or the FDA, the EMA-competent authorities of EU Member States or other comparable foreign regulatory authorities, or local regulatory authorities such as IRBs or ethics committees, could order us to cease clinical trials. Competent national health authorities, such as the FDA or the European **Commission**, could also deny approval of our product candidates for any or all targeted indications. Even if the side effects presented do not preclude the product from obtaining or maintaining marketing approval, treatment- related side effects could also affect patient recruitment or the ability of enrolled patients to complete the trial or result in potential product liability claims. In addition, these side effects may not be appropriately recognized or managed by the treating medical staff. We expect to have to train medical personnel using our product candidates, if approved, to understand the side effect profile of these technologies for both our planned clinical trials and upon any commercialization of any product candidates, if approved. Inadequate training in recognizing or managing the potential side effects of our technologies could result in patient deaths. Any of these occurrences may harm our business, financial condition and prospects significantly. If we encounter difficulties enrolling patients in our clinical trials, our clinical development activities could be delayed or otherwise adversely affected. We may experience difficulties in patient enrollment in our clinical trials for a variety of reasons. The timely completion of clinical trials in accordance with their protocols depends, among other things, on our ability to enroll a sufficient number of patients who remain in the trial until its conclusion. The enrollment of patients depends on many factors, including: • the patient eligibility criteria defined in the protocol; • the size of the patient population required for analysis of the trial's primary endpoints; • the proximity of patients to trial sites; • the design of the trial; • our ability to recruit clinical trial investigators with the appropriate competencies and experience; • clinicians' and patients' perceptions as to the potential advantages of the product candidate being studied in relation to other available therapies, including any new products that may be approved for the indications we are investigating; • the novel nature of the technology underlying our product candidates which may not be known to or be negatively perceived by clinical trial investigators or patients; 72 • our ability to obtain and maintain patient consents; • the risk that patients enrolled in clinical trials will drop out of the trials before the manufacturing and infusion of our product candidates or trial completion; and -- and - current or potential pandemics that may limit patients, principal investigators or staff or clinical site availability (e. g. the **recent** COVID- 19 pandemic). In addition, our clinical trials will compete with other clinical trials for product candidates that are in the same therapeutic areas as our product candidates or similar areas, and this competition will reduce the number and types of patients available to us because some patients who might have opted to enroll in our trials may instead opt to enroll in a trial being conducted by one of our competitors. Since the number of qualified clinical investigators is limited, we expect to conduct some of our clinical trials at the same clinical trial sites that some of our competitors use, which will reduce the number of patients who are available for our clinical trials at such clinical trial sites. Moreover, because our product candidates represent a departure from more commonly used methods for the treatment of infectious diseases and cancers, potential patients and their doctors may be inclined to use conventional therapies, such as chemotherapy and hematopoietic stem cell transplantation, rather than enroll patients in any future clinical trial. Additionally, because some of our clinical trials will be in patients with relapsed or refractory cancer, the patients are typically in the late stages of the disease and may experience disease progression independent from our product candidates, making them unevaluable for purposes of the trial and requiring additional enrollment. Delays in patient enrollment may result in increased costs or may affect the timing or outcome of our ongoing and planned clinical trials, which could prevent completion or commencement of these trials and adversely affect our ability to advance the development of our product candidates. We have

```
limited experience as a company conducting clinical trials or managing a manufacturing facility for our product candidates. We
have limited experience as a company in conducting clinical trials. In part because of this lack of experience, we cannot be
certain that our ongoing clinical trial trials will be completed on time or if the our planned clinical trials will begin or be
completed on time, if at all. Large scale trials would require significant additional financial and management resources and
reliance on third- party clinical investigators, contract research organizations (CROs), or consultants. Relying on third- party
clinical investigators or CROs may force us to encounter delays that are outside of our control. We do not have our own
manufacturing facility for the production of clinical trial material or future commercial products and therefore depend on third-
party contract manufacturing organizations (CMOs) and their knowhow for production of our product candidates. Because of our
limited control of our third- party manufacturers and in part because of our inexperience, our third- party manufacturers may fail
to produce our product in a reliable and consistent manner and in sufficient quality and quantity. We have encountered problems
with our third- party manufacturers in the past, including delays and low yields, and there can be no assurance that we will not
encounter similar or other difficulties in the future. As we continue to progress our product candidates into and through clinical
trials, we intend to operate our own manufacturing facility, which will require significant resources, and we have limited
experience as a company in expanding or managing a manufacturing facility. In part because of this lack of experience, we
cannot be certain that our manufacturing facility will be completed on time, if at all, or if the planned clinical trials will begin or
be completed on time, if at all. In addition, if we switch from one manufacturing facility to our own manufacturing facility for
one or more of our product candidates in the future, we may need to conduct additional studies to bridge our modified product
candidates to earlier versions. Failure to successfully create and operate our proposed manufacturing facility could adversely
affect the commercial viability of our product candidates. The market opportunities for our oncology product candidates may be
limited to those patients who are ineligible for or have failed prior treatments. Cancer therapies are characterized as first line,
second line, or third line, and the FDA and comparable foreign regulatory authorities often approves - approve new
therapies initially only for a particular line of use. When cancer is detected early enough, first line therapy is sometimes
adequate to cure the cancer or prolong life without a cure. Whenever first line therapy, usually chemotherapy, antibody drugs,
tumor- targeted small molecules, hormone therapy, radiation therapy, surgery, or a combination of these, proves <del>76unsuccessful</del>
-- unsuccessful, second line therapy may be administered. Second line therapies often consist of more chemotherapy, radiation,
antibody drugs, tumor- targeted small molecules, or a combination of these. Third line therapies can include hematopoietic stem
cell transplantation in certain cancers, chemotherapy, antibody drugs, and small molecule tumor- targeted therapies, more
invasive forms of surgery, and new revolutionary technologies. We expect to initially seek approval of our product candidates in
most instances at least as a third line therapy, for use in patients with relapsed or refractory metastatic cancer. Subsequently, for
those product candidates that prove to be sufficiently safe and beneficial, if any, we would expect to seek approval as a second
line therapy and potentially as a first line therapy, but there is no guarantee that our product candidates, even if approved as a
third or subsequent line of therapy, would be approved for an earlier line of therapy, and, prior to any such approvals, we may
have to conduct additional clinical trials. If 731f the market opportunities for our product candidates are smaller than we believe
they are, even assuming approval of a drug candidate, our business may suffer. Our projections of both the number of people
who have the infectious diseases and cancers we are targeting, as well as the subset of people with these infectious diseases and
cancers in a position to receive a particular line of therapy and who have the potential to benefit from treatment with our product
candidates, are based on our beliefs and estimates. These estimates have been derived from a variety of sources, including
scientific literature, commissioned reports, surveys of clinics, patient foundations or market research, and may prove to be
incorrect. Further, new therapies may change the estimated incidence or prevalence of these cancers. The number of patients
may turn out to be lower than expected. Additionally, the potentially addressable patient population for our product candidates
may be limited or may not be amenable to treatment with our product candidates. Even if we obtain significant market share for
our product candidates within our addressable patient population, because the potential target populations are small, we may
never achieve profitability without obtaining regulatory approval for additional indications, including use as first or second line
therapy. Even if we obtain regulatory approval of our product candidates, the products may not gain market acceptance among
physicians, patients, hospitals, cancer treatment centers, third-party payors and others in the medical community. The use of an
arenavirus for the treatment of infectious diseases and tumors is a recent development and may not become broadly accepted by
physicians, patients, hospitals, cancer treatment centers and others in the medical community. Various factors will influence
whether our product candidates, if approved, are accepted in the market, including: • the clinical indications for which our
product candidates are approved; • physicians, hospitals, cancer treatment centers and patients considering our product
candidates as a safe and effective treatment; • the potential and perceived advantages of our product candidates over alternative
treatments; • the prevalence and severity of any side effects; • the prevalence and severity of any side effects for virus-based
therapeutic products, in particular, other prime-boost therapies; • product labeling or product insert requirements of the FDA or
other regulatory authorities; • limitations or warnings contained in the labeling approved by the FDA or comparable foreign
regulatory authorities; ● the timing of market introduction of our product candidates as well as competitive products; ● the
cost of treatment in relation to alternative treatments; 77. the availability of adequate coverage, reimbursement and pricing by
third- party payors and government authorities; • relative convenience and ease of administration, including as compared to
alternative treatments and competitive therapies; and ● the effectiveness of our sales and marketing efforts. In 74In addition,
although we are not utilizing fully replication competent live virus vectors, our replicating technology uses a replication
attenuated vector and adverse publicity due to the ethical and social controversies surrounding the therapeutic use of such
technologies, and reported side effects from any clinical trials using these technologies or the failure of such trials to
demonstrate that these therapies are safe and effective may limit market acceptance of our product candidates. If our product
candidates are approved but fail to achieve market acceptance among physicians, patients, hospitals, cancer treatment centers,
third- party payors or others in the medical community, we will not be able to generate significant revenue and we may not
```

```
become profitable. Even if we, or any future collaborators, are able to commercialize any product candidate that we, or they,
develop, the product may become subject to unfavorable pricing laws, regulations or third- party payor coverage and
reimbursement policies, any of which could harm our business. In the United States and markets in other countries, patients
generally rely on third- party payors to reimburse all or part of the costs associated with their treatment. Adequate coverage and
reimbursement from governmental healthcare programs, such as Medicare and Medicaid, and commercial payors is critical to
new product acceptance. Our ability to successfully commercialize our product candidates will depend in part on the extent to
which coverage and adequate reimbursement for these products and related treatments will be available from government health
administration authorities, private health insurers and other organizations. These third-party payors decide which medications
they will pay for and establish reimbursement levels. The availability of coverage and extent of reimbursement by governmental
and private payors is essential for most patients to be able to afford many types of treatments. Sales of these or other product
candidates that we may identify will depend substantially, both domestically and abroad, on the extent to which the costs of our
product candidates will be paid by health maintenance, managed care, pharmacy benefit and similar healthcare management
organizations, or reimbursed by government health administration authorities, private health coverage insurers and other third-
party payors, See "Item 1. Business - Government Regulation - Coverage and Reimbursement." Net prices for drugs may be
reduced by mandatory discounts or rebates required by government healthcare programs or private payors and by any future
relaxation of laws that presently restrict imports of drugs from countries where they may be sold at lower prices than in the
United States. Increasingly, third- party payors are requiring that drug companies provide them with predetermined discounts
from list prices and are challenging the prices charged for medical products. We cannot be sure that reimbursement will be
available for any product candidate that we commercialize and, if reimbursement is available, the level of reimbursement. In
addition, many pharmaceutical manufacturers must calculate and report certain price reporting metrics to the government, such
as average sales price (ASP), and best price. Penalties may apply in some cases when such metrics are not submitted accurately
and timely. Further, these prices for drugs may be reduced by mandatory discounts or rebates required by government healthcare
programs. Additionally, we, or our collaborators may develop companion diagnostic tests for use with our product
candidates. We, or our collaborators, will be required to obtain coverage and reimbursement for these tests separate and
apart from the coverage and reimbursement we may seek for our product candidates. While we have not yet developed
any companion diagnostic tests for our product candidates, if we do, there is significant uncertainty regarding our
ability to obtain coverage and adequate reimbursement for the same reasons applicable to our product candidates. In
addition, the requirements governing drug pricing vary widely from country to country. In some foreign countries, the proposed
pricing for a drug must be approved before it may be lawfully marketed. For example, the European Union provides options for
its Member States to restrict the range of medicinal products for which their national health insurance systems provide
reimbursement and to control the prices of medicinal products for human use. An EU To obtain reimbursement or pricing
approval, some of these countries may require the completion of clinical trials that compare the cost effectiveness of a particular
product candidate to currently available therapies. A Member State may approve a specific price for the medicinal product, it
may refuse to reimburse a product at the price set by the manufacturer or it may instead adopt a system of direct or indirect
controls on the 78profitability -- profitability of the company placing the medicinal product on the market. Many EU
Member States also periodically review their reimbursement procedures for medicinal products, which could have an
adverse impact on reimbursement status. 75Moreover, in order to obtain reimbursement for our products in some
European countries, including some EU Member States, we may be required to compile additional data comparing the
cost- effectiveness of our products to other available therapies. This Health Technology Assessment ("HTA") of
medicinal products is becoming an increasingly common part of the pricing and reimbursement procedures in some EU
Member States, including those representing the larger markets. The HTA process is the procedure to assess
therapeutic, economic and societal impact of a given medicinal product in the national healthcare systems of the
individual country. The outcome of an HTA will often influence the pricing and reimbursement status granted to these
medicinal products by the competent authorities of individual EU Member States. The extent to which pricing and
reimbursement decisions are influenced by the HTA of the specific medicinal product currently varies between EU
Member States. There can be no assurance that any country that has price controls or reimbursement limitations for
pharmaceutical products will allow favorable reimbursement and pricing arrangements for any of our product candidates.
Historically, products launched in the European Union do not follow price structures of the U. S. and generally prices tend to be
significantly lower. We cannot predict whether we will receive reimbursement from third- party payors for any product we may
successfully commercialize in the future. Any reimbursement we may receive might not be adequate for use to generate
significant revenue and we may not become profitable. We are developing, and in the future may develop, other product
candidates, in combination with other therapies, which exposes us to additional risks. Our HB- 200 program is being developed
to be used in combination with or without an approved checkpoint inhibitor, a currently approved cancer therapy. In the future,
we may develop other product candidates to be used with one or more currently approved cancer therapies. Even if any product
candidate we develop were to receive marketing approval or be commercialized for use in combination with other existing
therapies, we would continue to be subject to the risks that the FDA or similar regulatory authorities outside of the United States
could revoke approval of the therapy used in combination with our product candidate or that safety, efficacy, manufacturing or
supply issues could arise with these existing therapies. Combination therapies are commonly used for the treatment of cancer,
and we would be subject to similar risks if we develop any of our product candidates for use in combination with other drugs or
for indications other than cancer. This could result in our own products being removed from the market or being less successful
commercially. In addition, if the results from our combination trials are not significantly better than results from the
existing therapy that we are combining with, then regulatory authorities, clinical investigators, physicians and patients
may perceive our product candidates negatively, which could adversely affect enrollment in our clinical trials, approval
```

by regulatory authorities or commercial adoption of our product candidates, if approved. We may also evaluate our future product candidates in combination with one or more other cancer therapies that have not yet been approved for marketing by the FDA or similar regulatory authorities outside of the United States. We will not be able to market any product candidate we develop in combination with any such unapproved cancer therapies that do not ultimately obtain marketing approval. If the FDA or similar regulatory authorities outside of the United States do not approve these other drugs or revoke their approval of, or if safety, efficacy, manufacturing, or supply issues arise with, the drugs we choose to evaluate in combination with any product candidate we develop, we may be unable to obtain approval. Negative developments in the field of immuno- oncology and virus- based therapies could damage public perception of any of our product candidates and negatively affect our business. The commercial success of product candidates based on our replicating technology will depend in part on public acceptance of the use of cancer immunotherapies. Adverse events in the HB- 200 program or our other product candidates based on our replicating technology or in clinical trials of others developing similar products and the resulting publicity, as well as any other negative developments in the field of immuno- oncology that may occur in the future, including in connection with competitor therapies, could result in a decrease in demand for any product candidates based on our replicating technology that we may develop. These events could also result in the suspension, discontinuation, or clinical hold of or modification to our clinical trials. If public perception is influenced by claims that the use of cancer immunotherapies is unsafe, whether related to our therapies or those of our competitors, our product candidates may not be 76be accepted by the general public or the medical community and potential clinical trial subjects may be discouraged from enrolling in our clinical trials. In addition, responses by national or state governments to negative public perception may result in new legislation or regulations that could limit our ability to develop or commercialize any product candidates, obtain or maintain regulatory approval or otherwise achieve profitability. More restrictive statutory regimes, government regulations or negative public opinion would have an adverse effect on our business, financial condition, prospects and results of operations and may delay or impair the development and commercialization of our product candidates or demand for any products we may develop. As a result, we may not be able to continue or may be delayed in conducting our development programs. Our product candidates consist of a modified virus. Adverse developments in clinical trials of other immunotherapy products based on viruses, like oncolytic viruses, may result in a disproportionately negative effect for 79our -- our non-replicating and replicating technologies as compared to other products in the field of infectious disease and immuno- oncology that are not based on viruses. Future negative developments in the biopharmaceutical industry could also result in greater governmental regulation, stricter labeling requirements and potential regulatory delays in the testing or approvals of our products. Any increased scrutiny could delay or increase the costs of obtaining marketing approval for our product candidates. We may not be successful in our efforts to identify and successfully commercialize additional product candidates. Part of our strategy involves identifying novel product candidates. We have developed a pipeline of product candidates and intend to pursue clinical development of additional product candidates utilizing our non-replicating and replicating technologies. The process by which we identify product candidates may fail to yield product candidates for clinical development for a number of reasons, including those discussed in these risk factors and also: • we may not be able to assemble sufficient resources to acquire or discover additional product candidates; • competitors may develop alternatives that render our potential product candidates obsolete or less attractive; • potential product candidates we develop may nevertheless be covered by third parties' patents or other exclusive rights; • potential product candidates may, on further study, be shown to have harmful side effects, toxicities or other characteristics that indicate that they are unlikely to be products that will receive marketing approval and achieve market acceptance; • potential product candidates may not be effective in treating their targeted diseases or symptoms; • the market for a potential product candidate may change so that the continued development of that product candidate is no longer reasonable: • a potential product candidate may not be capable of being produced in commercial quantities at an acceptable cost, or at all; or • the regulatory pathway for a potential product candidate is highly complex and difficult to navigate successfully or economically. Developing, obtaining regulatory approval for and commercializing additional product candidates will require substantial additional funding and is prone to the risks of failure inherent in medical product development. We cannot provide you with any assurance that we will be able to successfully advance any of these additional product candidates through the development process. We 77We may expend our limited resources to pursue a particular product candidate or indication and fail to capitalize on product candidates or indications that may be more profitable or for which there is a greater likelihood of success. We may choose to focus our efforts on and allocate resources to a potential product candidate that ultimately proves to be unsuccessful, or to license or purchase a marketed product that does not meet our financial expectations. As a result, we may fail to capitalize on viable commercial products or profitable market opportunities, be required to forego or delay pursuit of opportunities with other product candidates or other diseases that may later prove to have greater commercial potential, or relinquish valuable rights to such product candidates through collaboration, licensing or other royalty arrangements in cases in which it would have been advantageous for us to retain sole development and commercialization rights. Our spending on current and future research and development programs and product candidates for specific indications may not yield any commercially viable products. If we are unable to evaluate the 80commercial -- commercial potential or target market for a particular product candidate, identify and successfully commercialize additional suitable product candidates, this would adversely impact our business strategy and our financial position. We face significant competition from other biotechnology and pharmaceutical companies, and our operating results will suffer if we fail to compete effectively. The biopharmaceutical industry is characterized by intense competition and rapid innovation. Our competitors may be able to develop other products or drugs that are able to achieve similar or better results. Our potential competitors include major multinational pharmaceutical companies, established biotechnology companies, specialty pharmaceutical companies and universities and other research institutions. Many of our competitors have substantially greater financial, technical and other resources, such as larger research and development staff and experienced marketing and manufacturing organizations and well- established sales forces. In addition, many of these competitors are active in seeking

```
patent protection and licensing arrangements in anticipation of collecting royalties for use of technology that they have
developed. Smaller or early- stage companies may also prove to be significant competitors, particularly through collaborative
arrangements with large, established companies. Established pharmaceutical companies may also invest heavily to accelerate
discovery and development of novel therapeutics or to in-license novel therapeutics that could make the product candidates that
we develop obsolete. Mergers and acquisitions in the biotechnology and pharmaceutical industries may result in even more
resources being concentrated in our competitors. Competition may increase further as a result of advances in the commercial
applicability of technologies and greater availability of capital for investment in these industries. Our competitors, either alone
or with collaborative partners, may succeed in developing, acquiring or licensing on an exclusive basis drug or biologic products
that are more effective, safer, more easily commercialized or less costly than our product candidates or may develop proprietary
technologies or secure patent protection that we may need for the development of our technologies and products. We believe the
key competitive factors that will affect the development and commercial success of our product candidates are efficacy, safety,
tolerability, reliability, convenience of use, price and reimbursement. Specifically, we face significant competition in CMV
management from companies such as Helocyte, Inc., VBI Vaccines, Inc., Moderna, Inc., SL VaxiGen, Inc., Merek & Co.,
GlaxoSmithKline ple and Pfizer, Inc.-In immuno- oncology for HPV16 cancers, we face competition from companies such as
Kite Pharma BioNtech AG, Cue Biopharma a Gilead company, Advaxis, Inc., ISA Pharmaceuticals B. V., in collaboration
with Regeneron Pharmaceuticals, Inc., Kite Pharma, a Gilead company, and BioNtech AG PDS Biotechnology Corporation
. Even if we obtain regulatory approval of our product candidates, the availability and price of our competitors' products could
limit the demand and the price we are able to charge for our product candidates. In addition, other immuno- oncology
companies are developing the following technologies, including, but not limited to, neoantigens, bispecific antibodies,
engineered cell therapies and tumor specific antigens in areas outside of CMV and HPV16 cancers. We may not be able to
implement our business plan if the acceptance of our product candidates is inhibited by price competition or the reluctance of
physicians to switch from existing methods of treatment to our product candidates, or if physicians switch to other new drug or
biologic products or choose to reserve our product candidates for use in limited circumstances. He 781f product liability lawsuits
are brought against us, we may incur substantial liabilities and may be required to limit commercialization of our product
candidates. We face an inherent risk of product liability as a result of the clinical testing of our product candidates and will face
an even greater risk if we commercialize any products. For example, we may be sued if our product candidates cause or are
perceived to cause injury or are found to be otherwise unsuitable during clinical testing, manufacturing, marketing or sale. Any
such product liability claims may include allegations of defects in manufacturing, defects in design, a failure to warn of dangers
inherent in the product, negligence, strict liability or a breach of warranties. Claims could also be asserted under state consumer
protection acts. If we cannot successfully defend ourselves against product liability claims, we may incur substantial liabilities
or be required to limit commercialization of our product candidates. 81Even -- Even successful defense would require
significant financial and management resources. Regardless of the merits or eventual outcome, liability claims may result in:
our inability to commercialize any product candidate; • decreased demand for our product candidates or products that we may
develop; • reputational damage; • withdrawal of clinical trial participants and inability to continue clinical trials; • initiation of
investigations by regulators; • costs to defend the related litigation; • a diversion of management's time and our resources; •
substantial monetary awards to trial participants or patients; • product recalls, withdrawals or labeling, marketing or
promotional restrictions; • loss of revenue; • exhaustion of any available insurance and our capital resources; and • a decline in
our share price. Failure to obtain or retain sufficient product liability insurance at an acceptable cost to protect against potential
product liability claims could prevent or inhibit the commercialization of products we develop, alone or with corporate
collaborators. Although we have clinical trial insurance, our insurance policies also have various exclusions, and we may be
subject to a product liability claim for which we have no coverage. In the future, we may be unable to maintain this insurance
coverage, or we may not be able to obtain additional or replacement insurance at a reasonable cost, if at all. We may have to pay
any amounts awarded by a court or negotiated in a settlement that exceed our coverage limitations or that are not covered by our
insurance, and we may not have, or be able to obtain, sufficient capital to pay such amounts. Even if our agreements with any
future corporate collaborators entitle us to indemnification against losses, such indemnification may not be available or adequate
should any claim arise. A variety of risks associated with operating our business internationally could materially adversely affect
our business. We Many of our employees and a significant portion of our operations are located outside the United States,
including in Vienna, Austria. In addition, we plan to seek regulatory approval of our product candidates outside of the United
79United States and, accordingly, we expect that we, and any potential collaborators in those jurisdictions, will be subject to
additional risks related to operating in foreign countries, including: • differing regulatory requirements in foreign countries; •
unexpected changes in tariffs, trade barriers, price and exchange controls, and other regulatory requirements; • economic
weakness, including inflation, or political instability in particular foreign economies and markets; 82. compliance with tax,
employment, immigration, and labor laws for employees living or traveling abroad; • foreign taxes, including withholding of
payroll taxes; • foreign currency fluctuations, which could result in increased operating expenses and reduced revenue, and
other obligations incident to doing business in another country; • difficulties staffing and managing foreign operations; •
workforce uncertainty in countries where labor unrest is more common than in the United States; ● potential liability under the
Foreign Corrupt Practices Act of 1977 (FCPA), Office of Foreign Assets Control Anti- Money Laundering Program as required
by the Bank Secrecy Act and its implementing regulations, or comparable foreign laws; • challenges enforcing our contractual
and intellectual property rights, especially in those foreign countries that do not respect and protect intellectual property rights to
the same extent as the United States; and • production shortages resulting from any events affecting raw material supply or
manufacturing capabilities abroad. These and other risks associated with our planned international operations may materially
adversely affect our ability to attain or maintain profitable operations. Natural disasters, geopolitical unrest, war, terrorism,
public health issues or other catastrophic events could disrupt the supply, delivery or demand of products and reduce our
```

```
ability to access capital, which could negatively affect our operations and performance. We are subject to the risk of disruption
by earthquakes, floods and other natural disasters, fire, power shortages, geopolitical unrest, war, terrorist attacks and other
hostile acts, public health issues, epidemics or pandemics and other events beyond our control and the control of the third parties
on which we depend. Any of these catastrophic events, whether in the United States, Europe or abroad, may have a strong
negative impact on the global economy, our employees, facilities, partners, suppliers, distributors or customers, and could
decrease demand for our products, create delays and inefficiencies in our supply chain and make it difficult or impossible for us
to continue preclinical studies or clinical trials, seek and receive approval for any of our product candidates by the FDA
and comparable foreign regulatory authorities, or deliver products to our customers. Further, disruption of global
financial markets and a recession or market correction, including as a result of any resurgence of the coronavirus
pandemic, the ongoing military conflict between Russia and Ukraine and the related sanctions imposed against Russia,
any escalation of the conflict in Israel and the Gaza Strip, and other global macroeconomic factors, could reduce our
ability to access capital, which could, in the future, negatively affect our business. Our business may be adversely
affected by a pandemic, epidemic or outbreak of an infectious disease, such as the ongoing recent coronavirus pandemic and or
the other emergence of additional variants emerging global health threats on business and operations. Our business could
be adversely affected by health epidemics in regions where we have concentrations of clinical trial sites or other business
activities and could cause significant disruption in the operations of third- party contract manufacturers and contract research
organizations upon whom we rely, as well as our ability to recruit patients for our clinical trials. For example, the ongoing
recent coronavirus pandemic had continues to have unpredictable impacts on global societies, economies, financial markets,
and business practices around the world. The extent to which the ongoing coronavirus pandemic may impact our business.
results of operations and caused future growth prospects will depend on a variety of factors and future developments, which are
highly uncertain and cannot be predicted with confidence, including the duration, scope and severity of the pandemic,
particularly as virus variants continue to spread. For example, we experienced, and may experience again, some temporary
delays or and disruptions due to the coronavirus pandemie, including pauses in and delays to patient dosing, limited or our
reduced patient access to ICU beds, hospitals and healthcare resources generally, delayed initiation of new-clinical development
trial sites and limited on-site personnel support at various trial sites. In addition, certain of our third-party manufacturers and
suppliers paused their operations in the early stages of the pandemic, and some have paused their operations again as additional
waves of the coronavirus pandemic have impacted local communities and / or as a result of national and local regulations. 83We
are actively monitoring and managing our response and evaluating the actual and potential impacts to our business operations,
including on our ongoing and planned clinical trials. We will continue to work closely with our third-party vendors,
collaborators, and other parties in order to seek to advance our programs and pipeline of product candidates, while keeping the
health and safety of our employees and their families, partners, third-party vendors, healthcare providers, patients and
communities a top priority. We currently have no marketing and sales organization and have no experience in marketing
products. If we are unable to establish marketing and sales capabilities or enter into agreements with third parties to market and
sell our product candidates, if approved, we may not be able to generate product revenue. We currently have no sales, marketing
or distribution capabilities and have no experience in marketing products. Our operations to date have been limited to organizing
and staffing our company, business planning, raising capital, undertaking preclinical studies and clinical trials of product
candidates, securing related intellectual property rights and conducting discovery, research and development activities for our
programs. We intend to develop an in-house marketing organization and sales force, which will require significant capital
expenditures, management resources and time. We will have to compete with other biotechnology and pharmaceutical
companies to recruit, hire, train and retain marketing and sales personnel. There are risks involved with both establishing our
own sales and marketing capabilities and entering into arrangements with third parties to perform these services. For example,
recruiting and training a sales force is expensive and time- consuming and could delay any product launch. If the commercial
launch of a product candidate for which we recruit a sales force and establish marketing capabilities is delayed or does not occur
for any reason, we would have prematurely or unnecessarily incurred these commercialization expenses. This may be costly,
and our investment would be lost if we cannot retain or reposition our sales and marketing personnel. In addition, there can be
no assurance that we will be able to develop inhouse sales and distribution capabilities or establish or maintain relationships
with third- party collaborators to commercialize any product in the United States or overseas. Insurance policies are expensive
and protect us only from some business risks, which leaves us exposed to significant uninsured liabilities. We do not carry
insurance for all categories of risk that our business may encounter. Some of the policies we currently maintain include general
liability, employment practices liability, property, umbrella, and directors' and officers' insurance. Insurance coverage is
becoming increasingly expensive and in the future we may not be able to maintain insurance coverage at a reasonable cost or in
sufficient amounts to protect us against losses due to liability. We do not carry specific biological or hazardous waste insurance
coverage, and our property, casualty and general liability insurance policies specifically exclude coverage for damages and fines
arising from biological or hazardous waste exposure or contamination. Accordingly, in the event of contamination or injury, we
could be held liable for damages or be penalized with fines in an amount exceeding our resources, and our clinical trials or
regulatory approvals could be suspended. We also expect that firming of the insurance market will make it more difficult and
more expensive for us to obtain director and officer liability insurance, and we may be required to accept reduced policy limits
and coverage or incur substantially higher costs to obtain the same or similar coverage. As a result, it may be more difficult for
us to attract and retain qualified people to serve on our board of directors, our board committees or as executive officers. We do
not know, however, if we will be able to maintain existing insurance with adequate levels of coverage. Any significant
uninsured liability may require us to pay substantial amounts, which would adversely affect our cash position and results of
operations. Exchange 81 Exchange rate fluctuations may materially affect our results of operations and financial conditions.
Owing to the international scope of our operations, fluctuations in exchange rates, particularly between the U. S. dollar and the
```

```
euro, may adversely affect us. Although we are incorporated in Delaware in the United States, we have 84significant-
significant research and development operations in Austria, and source third- party manufacturing, consulting and other
services in the European Union. As a result, our business and the price of our common stock may be affected by fluctuations in
foreign exchange rates, which may have a significant impact on our results of operations and cash flows from period to period.
Currently, we do not have any exchange rate hedging arrangements in place. Risks Related to Our Reliance on Third PartiesWe
are fully dependent on our collaboration with Roche for the development of our HB-700 program and our collaborations with
Gilead for the development of our HBV programs, rely on funding from both-Gilead and Roche for development of our human
immunodeficiency virus and HB-700-program respectively, and may depend on Gilead, Roche or additional third parties for
the development and commercialization of our other programs and future product candidates. Our current and future
collaborators may control aspects of our clinical trials, which could result in delays or other obstacles in the commercialization
of the product candidates we develop. If our collaborations are not successful, we may not be able to capitalize on the market
potential of these product candidatesWe are currently party to collaborations with Roche and Gilead to help expand and advance
our pipeline of candidates. In the future, we may form or seek other strategic alliances, joint ventures, or collaborations, or enter
into additional licensing arrangements with third parties that we believe will complement or augment our development and
commercialization efforts with respect to product candidates we develop. Our current collaborations poses - pose, and potential
future collaborations involving our product candidates may pose, the following risks to us: ● collaborators have significant
discretion in determining the efforts and resources that they will apply to these collaborations; • collaborators may not perform
their obligations as expected; • collaborators may not pursue development and commercialization of any product candidates that
achieve regulatory approval or may elect not to continue or renew development or commercialization programs or license
arrangements based on clinical trial results, changes in the collaborators' strategic focus or available funding, or external factors,
such as a strategic transaction that may divert resources or create competing priorities; • collaborators may delay clinical trials,
provide insufficient funding for a clinical trial program, stop a clinical trial or abandon a product candidate, repeat or conduct
new clinical trials or require a new formulation of a product candidate for clinical testing; • collaborators could independently
develop, or develop with third parties, including technology we in-license, products that compete directly or indirectly with our
products or product candidates; • product candidates discovered in collaboration with us may be viewed by our collaborators as
competitive with their own product candidates or products, which may cause collaborators to cease to devote resources to the
commercialization of our product candidates; • collaborators may fail to comply with applicable regulatory requirements
regarding the development, manufacture, distribution or marketing of a product candidate or product; • collaborators may not
properly enforce, maintain or defend our intellectual property rights or may use our proprietary information in a way that gives
rise to actual or threatened litigation that could jeopardize or invalidate 82 invalidate our intellectual property or proprietary
information or expose us to potential litigation, or other intellectual property proceedings; 85.  collaborators may infringe the
intellectual property rights of third parties, which may expose us to litigation and potential liability; • disputes may arise
between a collaborator and us that cause the delay or termination of the research, development or commercialization of the
product candidate, or that result in costly litigation or arbitration that diverts management attention and resources; • if a present
or future collaborator of ours were to be involved in a business combination, the continued pursuit and emphasis on our product
development or commercialization program under such collaboration could be delayed, diminished or terminated; •
collaboration agreements may restrict our right to independently pursue new product candidates. For example, under the Gilead
Collaboration Agreement, we are prohibited from, directly or indirectly, researching, developing, manufacturing or
commercializing product candidates targeted to HBV and with respect to HIV so long as Gilead's option for the program has not
expired; and • collaborations may be terminated by the collaborator (such as the termination of the Roche Collaboration
Agreement by Roche), and, if terminated, we may suffer reputational harm, find it more difficult to attract new collaborators
and be required to raise additional capital to pursue further development or commercialization of the applicable product
candidates. As a result, if we enter into additional collaboration agreements and strategic partnerships, or license our intellectual
property, products or businesses, we may not be able to realize the benefit of such transactions if we are unable to successfully
integrate them with our existing operations, which could delay our timelines or otherwise adversely affect our business. We also
cannot be certain that, following a strategic transaction or license, we will achieve the revenue or specific net income that
justifies such transaction. Any delays in entering into new collaborations or strategic partnership agreements related to any
product candidate we develop could delay the development and commercialization of our other product candidates, which
would harm our business prospects, financial condition, and results of operations. We may seek to establish additional
collaborations, and, if we are not able to establish them on commercially reasonable terms, we may have to alter our
development and commercialization plans. The advancement of our product candidates and development programs and the
potential commercialization of our current and future product candidates will require substantial additional cash to fund
expenses. For some of our programs, we may decide to collaborate with additional biotechnology and pharmaceutical
companies with respect to development and potential commercialization. Any of these relationships may require us to incur non-
recurring and other charges, increase our near and long term expenditures, issue securities that dilute our existing stockholders,
or disrupt our management and business. We will likely have limited control over the amount and timing of resources that our
collaborators dedicate to the development or commercialization of any product candidates we may seek to develop with them.
We cannot predict the success of any collaboration that we have entered into or will enter into. For example, in January 2024
Roche notified us of their decision to terminate the Roche Collaboration Agreement despite acknowledging we had met
all go- forward criteria under the agreement. We face significant competition in seeking appropriate strategic partners and
the negotiation process is time- consuming and complex. Whether we reach a definitive agreement for other collaborations will
depend, among other things, upon our assessment of the collaborator's resources and expertise, the terms and conditions of the
proposed collaboration and the proposed collaborator's evaluation of a number of factors. Those factors may include the design
```

or results of clinical trials, the progress of our clinical trials, the likelihood of approval by the FDA or similar regulatory authorities outside the United States, the potential market for the subject product candidate, the costs and complexities of manufacturing and delivering such product candidate to patients, the potential of competing products, the existence of uncertainty 83uncertainty with respect to our ownership of technology, which can exist if there is a challenge to such ownership without regard to the merits of the challenge and industry and market conditions generally. The collaborator may also consider alternative product candidates or technologies for similar indications that may be available to collaborate on and whether such a collaboration could be more attractive than the one with us for our product candidate. Further, we may not be successful in our efforts to establish a strategic partnership or other alternative arrangements for future 86product -- product candidates because they may be deemed to be at too early of a stage of development for collaborative effort and third parties may not view them as having the requisite potential to demonstrate safety and efficacy. We may also be restricted under existing collaboration agreements from entering into future agreements on certain terms with potential collaborators. For example, under the **Restated** Gilead Collaboration Agreement, we have granted worldwide exclusive rights to Gilead for using our technologies to develop treatments for HBV, and during the term of the agreement we will be restricted from granting similar rights to other parties. This exclusivity could limit our ability to enter into strategic collaborations with future collaborators. In addition, there have been a significant number of recent business combinations among large pharmaceutical companies that have resulted in a reduced number of potential future collaborators. We may not be able to negotiate collaborations on a timely basis, on acceptable terms, or at all. If we are unable to do so, we may have to curtail the development of the product candidate for which we are seeking to collaborate, reduce or delay its development program or one or more of our other development programs, delay its potential commercialization or reduce the scope of any sales or marketing activities, or increase our expenditures and undertake development or commercialization activities at our own expense. If we elect to increase our expenditures to fund development or commercialization activities on our own, we may need to obtain additional capital, which may not be available to us on acceptable terms or at all. If we fail to enter into collaborations or do not have sufficient funds, we may not be able to further develop our product candidates or bring them to market and generate product revenue. We rely and will continue to rely on third parties to conduct our clinical trials. If these third parties do not properly and successfully carry out their contractual duties or meet expected deadlines, we may not be able to obtain regulatory approval of or commercialize our product candidates. We depend and will continue to depend upon independent investigators and collaborators, such as medical institutions, CROs, CMOs and strategic partners to conduct our preclinical studies and clinical trials under agreements with us. We expect to have to negotiate budgets and contracts with CROs, trial sites and CMOs which may result in delays to our development timelines and increased costs. We will rely heavily on these third parties over the course of our clinical trials, and we control only certain aspects of their activities. As a result, we have less direct control over the conduct, timing and completion of these clinical trials and the management of data developed through clinical trials than would be the case if we were relying entirely upon our own staff. Nevertheless, we are responsible for ensuring that each of our studies is conducted in accordance with applicable protocol, legal and regulatory requirements and scientific standards, and our reliance on third parties does not relieve us of our regulatory responsibilities. We and these third parties are required to comply with GCPs, which are regulations and guidelines enforced by the FDA and comparable foreign regulatory authorities for product candidates in clinical development. Regulatory authorities enforce these GCPs through periodic inspections of trial sponsors, principal investigators and trial sites. If we or any of these third parties fail to comply with applicable GCP regulations, the clinical data generated in our clinical trials may be deemed unreliable and the FDA or comparable foreign regulatory authorities may require us to perform additional clinical trials before approving our marketing applications. We cannot assure you that, upon inspection, such regulatory authorities will determine that any of our clinical trials comply with the GCP regulations. In addition, our clinical trials must be conducted with biologic product produced under current good manufacturing practices (cGMP) regulations and will require a large number of test patients. Our failure or any failure by these third parties to comply with these regulations or to recruit a sufficient number of patients may require us to repeat clinical trials, which would delay the regulatory approval process. Moreover, our business may be implicated if any of these third parties violates federal or state fraud and abuse or false claims laws and regulations or healthcare privacy and security laws. Any 84Any third parties conducting our clinical trials are and will not be our employees and, except for remedies available to us under our agreements with such third parties, we cannot control whether or not they devote sufficient time and resources to our ongoing, clinical and nonclinical programs. These third parties may also have relationships with other commercial entities, including our competitors, for whom they may also be conducting clinical studies or other drug development activities, which could affect their performance on our behalf. If these third parties do not 87successfully -- successfully carry out their contractual duties or obligations or meet expected deadlines, if they need to be replaced or if the quality or accuracy of the clinical data they obtain is compromised due to the failure to adhere to our clinical protocols or regulatory requirements or for other reasons, our clinical trials may be extended, delayed or terminated and we may not be able to complete development of, obtain regulatory approval of or successfully commercialize our product candidates. As a result, our financial results and the commercial prospects for our product candidates would be harmed, our costs could increase and our ability to generate revenue could be delayed. Switching or adding third parties to conduct our clinical trials involves substantial cost and requires extensive management time and focus. In addition, there is a natural transition period when a new third party commences work. As a result, delays occur, which can materially impact our ability to meet our desired clinical development timelines. We rely and expect to continue to rely on third parties to manufacture our clinical product supplies, and we may rely on third parties for at least a portion of the manufacturing process of our product candidates, if approved. Our business could be harmed if those third parties fail to provide us with sufficient quantities of clinical product supplies or product candidates or fail to do so at acceptable quality levels or prices. We do not currently own any facility that may be used as our clinical- scale manufacturing and processing facility and must currently rely on outside vendors to manufacture our product candidates. We have not yet caused our product candidates to be manufactured or processed on a commercial scale and may not

```
be able to do so for any of our product candidates. The manufacture of biological drug products is complex and requires
significant expertise and capital investment, including the development of advanced manufacturing techniques and process
controls. Manufacturers of biologic products often encounter difficulties in production, particularly in scaling up or out,
validating the production process and assuring high reliability of the manufacturing process, including the absence of
contamination. These problems include logistics and shipping, difficulties with production costs and yields, quality control,
including lot consistency, stability of the product, product testing, operator error and availability of qualified personnel, as well
as compliance with strictly enforced federal, state and foreign regulations. We have encountered problems with our third
party manufacturers in the past, including delays and low yields, and there can be no assurance that we will not
encounter similar or other difficulties in the future. Furthermore, if contaminants are discovered in our supply of our product
candidates or in the manufacturing facilities, such manufacturing facilities may need to be closed for an extended period of time
to investigate and remedy the contamination. We cannot assure you that any stability failures or other issues relating to the
manufacture of our product candidates will not occur in the future . Although we do intend to develop our own manufacturing
facility, we currently rely on third parties as part of our manufacturing process and may, in any event, never be successful in
developing our own manufacturing facility. Our reliance on a limited number of third- party manufacturers exposes us to the
following risks: • the production process for our product candidates is complex and requires specific know-how that only a
limited number of CMOs can provide, as a result, we compete with other companies in the field for the scarce capacities of these
organizations and may not be able to secure sufficient manufacturing capacity when needed; • we may be unable to identify
manufacturers on acceptable terms or at all because the number of potential manufacturers is limited and the FDA and
comparable foreign regulatory authorities must inspect any manufacturers for cGMP compliance as part of our marketing
application; • a new manufacturer would have to be educated in, or develop substantially equivalent processes for, the
production of our product candidates; 85 • a change in manufacturers or certain changes in manufacturing processes /
procedures will require that we conduct a manufacturing comparability study to verify that any new manufacturer or
manufacturing process / procedure will produce our product candidate according to the specifications previously submitted to
the FDA or other regulatory authority, to which we may be unsuccessful; 88. manufacturers may have little or no experience
with viral vector products and therefore may require a significant amount of support from us in order to implement and maintain
the infrastructure and processes required to manufacture our product candidates; • manufacturers might be unable to timely
manufacture our product candidates or produce the quantity and quality required to meet our clinical and commercial needs, if
any; • manufacturers may not be able to execute our manufacturing procedures and other logistical support requirements
appropriately; • manufacturers may not perform as agreed, may not devote sufficient resources to our product candidates or may
not remain in the contract manufacturing business for the time required to supply our clinical trials or to successfully produce,
store, and distribute our products, if any; • manufacturers are subject to ongoing periodic unannounced inspection by the FDA
and corresponding state and foreign agencies regulatory authorities to ensure strict compliance with cGMP and other
government regulations and corresponding foreign standards, of which we do not have limited control over; • we may not own,
or may have to share, the intellectual property rights to any improvements made by our third-party manufacturers in the
manufacturing process for our product candidates; • manufacturers could breach or terminate their agreements with us; • raw
materials and components used in the manufacturing process, particularly those for which we have no other source or supplier,
may not be available timely or may not be suitable or acceptable for use due to material or component defects; • manufacturers
and critical suppliers may be subject to risks related to cyber- attacks that could cause disruptions in manufacturing; •
manufacturers and critical suppliers may be subject to inclement weather, as well as natural or manmade man-made
disasters; and • manufacturers may have unacceptable or inconsistent product quality success rates and yields, and we have no
direct control over our contract manufacturers' ability to maintain adequate quality control, quality assurance and qualified
personnel. Any of these risks could delay or prevent the completion of our clinical trials or the approval of any of our product
candidates by the FDA and comparable foreign regulatory authorities, result in higher costs or adversely impact
commercialization of our product candidates. In addition, we will rely on third parties to perform certain specification tests on
our product candidates prior to delivery to patients. If these tests are not appropriately done and test data are not reliable, patients
could be put at risk of serious harm and the FDA and comparable foreign regulatory authorities could place significant
restrictions on our company until deficiencies are remedied. Despite our efforts to audit and verify regulatory compliance,
one or more of our third- party manufacturing vendors may be found on regulatory inspection by the FDA, competent
authorities of EU Member States or other comparable foreign regulatory authorities to be noncompliant with cGMP
regulations. Our failure, or the failure of our third- party manufacturers, to comply with applicable regulations could
result in sanctions being imposed on us, 86including shutdown of the third- party vendor or invalidation of drug product
lots or processes, fines, injunctions, civil penalties, delays, suspension, variation or withdrawal of approvals, license
revocation, seizures or recalls of product candidates or drugs, operating restrictions and criminal prosecutions, any of
which could significantly and adversely affect supplies of our products, if approved, and significantly harm our business,
financial condition, results of operations and prospects. If our third- party manufacturers use hazardous and biological
materials in a manner that causes injury or violates applicable law, we may be liable for damages. Our research and
development activities involve the controlled use of potentially hazardous substances, including chemical and biological
materials, by our manufacturers. Our manufacturers are subject to federal, state and local laws and regulations in the United
States governing the use, manufacture, storage, handling and disposal of medical and hazardous materials. Although we believe
that our manufacturers' procedures for using, handling, storing and disposing of these materials comply with legally prescribed
standards, we cannot completely eliminate the risk of contamination or injury resulting from medical or hazardous materials. As
a result of any such contamination or injury, we may incur liability or local, city, state or federal authorities may curtail the use
of these materials and interrupt our business operations. In the event of an accident, we could be held liable for damages or
```

```
penalized with fines, and the liability could exceed our resources. We do not have any insurance for liabilities arising from
medical or hazardous 89materials -- materials. Compliance with applicable environmental laws and regulations is expensive,
and current or future environmental regulations may impair our research, development and production efforts, which could harm
our business, prospects, financial condition or results of operations. Risks Related to Government RegulationEven if we receive
regulatory approval of our product candidates, we will be subject to ongoing regulatory obligations and continued regulatory
review, which may result in significant additional expense and we may be subject to penalties if we fail to comply with
regulatory requirements or experience unanticipated problems with our product candidates. Any regulatory approvals that we
receive for our product candidates will require surveillance to monitor the safety and efficacy of the product candidate. The FDA
may also require a (REMS) in order to approve our product candidates, which could entail requirements for a medication guide,
physician communication plans or additional elements to ensure safe use, such as restricted distribution methods, patient
registries and other risk minimization tools. Comparable foreign regulatory authorities may impose similar requirements.
Additionally, under the Food and Drug Omnibus Reform Act of 2022 (FDORA), sponsors of approved drugs and biologics
must provide six months' notice to the FDA of any changes in marketing status, such as the withdrawal of a drug, and failure to
do so could result in the FDA placing the product on a list of discontinued products, which would revoke the product's ability
to be marketed. In addition, if the FDA, the EMA European Commission or another comparable foreign regulatory authority
approves our product candidates, the manufacturing processes, labeling, packaging, distribution, adverse event reporting,
storage, advertising, promotion, import, export and recordkeeping for any such approved product candidates will be subject to
extensive and ongoing regulatory requirements. These requirements include submissions of safety and other post-marketing
information and reports, registration, as well as continued compliance with cGMPs and GCPs for any clinical trials that we
conduct post-approval. Later discovery of previously unknown problems with our product candidates, including adverse events
of unanticipated severity or frequency, or with our third- party manufacturers or manufacturing processes, or our or our
distributors', licensees' or co-marketers' failure to comply with changes to regulatory requirements, may result in, among other
things: • restrictions on the marketing or manufacturing of our product candidates, withdrawal of the product from the market or
voluntary or mandatory product recalls; • fines, warning or untitled letters or holds on clinical trials; 87 • suspension of any
ongoing clinical trials; • refusal by the FDA, the EMA European Commission or other comparable foreign regulatory
authorities to approve pending applications or supplements to approved applications filed by us or suspension or revocation of
license approvals; • product seizure or detention, refusal to permit the import or export of our product candidates, or request that
we initiate a product recall; • injunctions or the imposition of civil or criminal penalties or monetary fines; and • requiring us to
conduct additional clinical trials, change our product labeling or submit additional applications for marketing authorization. The
FDA's, the EMA's <mark>and the European Commission</mark> and other comparable foreign regulatory authorities' policies may change
and additional government regulations may be enacted that could prevent, limit or delay regulatory approval of our product
candidates. As an example, the regulatory landscape related to clinical trials in the EU has evolved. The EU Clinical
Trials Regulation, or CTR, which was adopted in April 2014 and repeals the EU Clinical Trials Directive, became
applicable on January 31, 2022. The CTR permits trial sponsors to make a single submission to both the competent
authority and an ethics committee in each EU Member State, leading to a single decision for each EU Member State. The
assessment procedure for the authorization of clinical trials has been harmonized as well, including a joint assessment of
some elements of the application by all EU Member States in which the trial is to be conducted, and a separate
assessment by each EU Member State with respect to specific requirements related to its own territory, including ethics
rules. Each EU Member State's decision is communicated to the sponsor through a centralized EU portal, the Clinical
Trial Information System, or CTIS. The CTR provides a three- year transition period. The extent to which ongoing
clinical trials will be governed by the CTR varies. For clinical trials in relation to which an application for approval was
made on the basis of the Clinical Trials Directive before January 31, 2023, the CTD will continue to apply on a
transitional basis until January 31, 2025. By that date, all ongoing trials will become subject to the provisions of the
CTR. The CTR will apply to clinical trials from an earlier date if the related clinical trial application was made on the
basis of the CTR or if the clinical trial has already transitioned to the CTR framework before January 31, 2025. In light
of the entry into application of the CTR on January 31, 2022, we may be required to transition clinical trials for which
we have obtained regulatory approvals in accordance with the CTD to the regulatory framework of the CTR by October
31, 2024. A transitioning application will need to be submitted to the competent authorities of E. U. Member States
through the Clinical Trials Information Systems and related regulatory approval obtained to continue the clinical trial
past January 30, 2025. This will require financial, technical and human resources. If we are unable to transition our
clinical trials in time, the conduct of those clinical trials may be negatively impacted. We cannot predict the likelihood,
nature or extent of government regulation that may arise from future 90legislation -- legislation or administrative action, either
in the United States or abroad. If we are slow or unable to adapt to changes in existing requirements or the adoption of new
requirements or policies, or if we are not able to maintain regulatory compliance, we may lose any marketing approval that we
may have obtained and we may not achieve or sustain profitability. If any of these events occurs, our ability to commercialize
such product candidate may be impaired, and we may incur substantial additional expense to comply with regulatory
requirements, which could adversely affect our business, financial condition and results of operations. The impact of recent
healthcare reform legislation and other changes in the healthcare industry and in healthcare spending on us is currently
unknown, and may adversely affect our business model. In the United States and some foreign jurisdictions, there have been a
number of legislative and regulatory changes and proposed changes regarding the healthcare system that could prevent or delay
marketing approval of our product candidates, restrict or regulate post-approval activities and affect our ability, or the ability of
our collaborators, to profitably sell any products for which we obtain marketing approval. We expect that current laws, as well
as other healthcare reform measures that may be adopted in the future, may result in more rigorous coverage criteria and in
```

```
additional 88additional downward pressure on the price that we, or our collaborators, may receive for any approved products.
See "Business - Other U. S. Healthcare Laws." We cannot predict the initiatives that may be adopted in the future. The
continuing efforts of the government, insurance companies, managed care organizations and other payers of healthcare services
to contain or reduce costs of healthcare may adversely affect: • the demand for any of our product candidates, if approved; •
the ability to set a price that we believe is fair for any of our product candidates, if approved; • our ability to generate revenues
and achieve or maintain profitability; • the level of taxes that we are required to pay; and • the availability of capital. In
December 2021, Regulation No 2021 / 2282 on HTA amending Directive 2011 / 24 / EU, was adopted in the EU. This
Regulation, which entered into force in January 2022 and will apply as of January 2025, is intended to boost cooperation
among EU Member States in assessing health technologies, including new medicinal products, and providing the basis
for cooperation at EU level for joint clinical assessments in these areas. The Regulation foresees a three- year transitional
period and will permit EU Member States to use common HTA tools, methodologies, and procedures across the EU,
working together in four main areas, including joint clinical assessment of the innovative health technologies with the
most potential impact for patients, joint scientific consultations whereby developers can seek advice from HTA
authorities, identification of emerging health technologies to identify promising technologies early, and continuing
voluntary cooperation in other areas. Individual EU Member States will continue to be responsible for assessing non-
clinical (e.g., economic, social, ethical) aspects of health technologies, and making decisions on pricing and
reimbursement. If we are unable to maintain favorable pricing and reimbursement status in EU Member States for
product candidates that we may successfully develop and for which we may obtain regulatory approval, any anticipated
revenue from and growth prospects for those products in the EU could be negatively affected. In light of the fact that the
United Kingdom has left the EU, Regulation No 2021 / 2282 on HTA will not apply in the United Kingdom. However, the
UK Medicines and Healthcare products Regulation Agency ("MHRA") is working with UK HTA bodies and other
national organizations, such as the Scottish Medicines Consortium (" SMC "), the National Institute for Health and Care
Excellence ("NICE"), and the All-Wales Medicines Strategy Group, to introduce new pathways supporting innovative
approaches to the safe, timely and efficient development of medicinal products. In addition, on April 26, 2023, the
European Commission adopted a proposal for a new Directive and Regulation to revise the existing pharmaceutical
legislation. If adopted in the form proposed, the recent European Commission proposals to revise the existing EU laws
governing authorization of medicinal products may result in a decrease in data and market exclusivity opportunities for
our product candidates in the EU and make them open to generic or biosimilar competition earlier than is currently the
case with a related reduction in reimbursement status. Legislative and regulatory proposals have been made to expand post-
approval requirements and restrict sales and promotional activities for pharmaceutical and biologic products. We cannot be sure
whether additional legislative changes will be enacted, or whether FDA regulations, guidance or interpretations will be changed,
or what the impact of such changes on the marketing approvals of our product candidates, if any, may be. In addition, increased
scrutiny by Congress of the FDA's approval process may significantly delay or prevent marketing approval, as well as subject
us to more stringent product labeling and post- marketing testing and other requirements. Compliance with new requirements
may increase our operational expenses and impose significant administrative burdens. As a result of these and other new
proposals, we may need to change our current manner of operation, which could have a material adverse effect on our business,
financial condition, and results of operations. Any reduction in reimbursement from Medicare or other government healthcare
programs may result in a similar reduction in payments from private payors. The implementation of cost containment measures
or other healthcare reforms may prevent us from being able to generate revenue, attain profitability or commercialize our
products. Legislative and regulatory proposals may also impact 89impact our regulatory and commercial prospects, expand
post- approval requirements, and restrict sales and promotional activities. We cannot predict the extent to which our business
may be affected by these or other potential future legislative or regulatory developments, whether regulations, guidance or
interpretations will be changed, or what the impact of such changes on the marketing approvals of our product candidates, if
any, may be. Such future price controls or other changes in pricing regulation or negative publicity related to the pricing of
pharmaceutical drugs generally could restrict the amount that we are able to charge for our future products, which would
adversely affect our anticipated revenue and results of operations. 91We See "Business - U. S. Healthcare Reform." We
expect that the healthcare reform measures that have been adopted and may be adopted in the future, may result in more
rigorous coverage criteria and in additional downward pressure on the price that we receive for any approved product and could
seriously harm our future revenues. Any reduction in reimbursement from Medicare or other government programs may result in
a similar reduction in payments from private payors. The implementation of cost containment measures or other healthcare
reforms may prevent us from being able to generate revenue, attain profitability or commercialize our products. The FDA or
comparable foreign regulatory authorities could require the clearance, CE marking or approval of a companion diagnostic
device as a condition of approval for our product candidates. Failure to successfully validate, develop and obtain regulatory
clearance or approval for companion diagnostics on a timely basis or at all could harm our drug development strategy. Our
success may depend, in part, on the development and commercialization of companion diagnostic tests to select patients for our
drug candidates. If safe and effective use of any of our product candidates depends on an in vitro diagnostic that is not otherwise
commercially available, then the FDA generally will require approval or clearance of that diagnostic, known as a companion
diagnostic, at the same time that the FDA approves our product candidates. The process of obtaining or creating such diagnostic
is time consuming and costly. Foreign regulatory authorities may impose comparable requirements. Companion
diagnostics, which provide information that is essential for the safe and effective use of a corresponding therapeutic product, are
subject to regulation by the FDA and comparable foreign regulatory authorities as medical devices and require separate
regulatory approval from the rapeutic approval prior to commercialization. The FDA previously has required in vitro companion
diagnostics intended to select the patients who will respond to a product candidate to obtain pre-market approval (PMA),
```

```
simultaneously with approval of the therapeutic candidate. The PMA process, including the gathering of preclinical and clinical
data and the submission and review by the FDA, can take several years or longer. It involves a rigorous premarket review
during which the applicant must prepare and provide FDA with reasonable assurance of the device's safety and effectiveness
and information about the device and its components regarding, among other things, device design, manufacturing, and
labeling. After a device is placed on the market, it remains subject to significant regulatory requirements, including requirements
governing development, testing, manufacturing, distribution, marketing, promotion, labeling, import, export, record-keeping,
and adverse event reporting. We will be subject to additional obligations and regimes with respect to such companion diagnostic
tests with regulators outside the United States. In the EEA, companion diagnostics are deemed to be in vitro diagnostic
medical devices, or IVDs, and are governed by Regulation 2017 / 746, or IVDR, which entered into application on May
26, 2022, repealing and replacing Directive 98 / 79 / EC. The IVDR defines a companion diagnostic as a device which is
essential for the safe and effective use of a corresponding medicinal product to: (a) identify, before and / or during
treatment, patients who are most likely to benefit from the corresponding medicinal product; or (b) identify, before and /
or during treatment, patients likely to be at increased risk of serious adverse reactions as a result of treatment with the
corresponding medicinal product. The IVDR and its associated guidance documents and harmonized standards govern,
among other things, device design and development, preclinical and clinical or performance testing, premarket
conformity assessment, registration and listing, manufacturing, labeling, storage, claims, sales and distribution, export
and import and post- market surveillance, vigilance, and market surveillance. IVDs, including companion diagnostics,
must conform with the general safety and performance requirements, or GSPR, of the IVDR. Compliance with these
requirements is a prerequisite to be able to affix the CE mark to devices, without which they cannot be marketed or sold
in the EEA. To demonstrate compliance with the GSPR laid down in Annex I to the IVDR, and obtain the right to affix
the CE mark, IVD manufacturers must 90conduct a conformity assessment procedure, which varies according to the
type of IVD and its classification. Companion diagnostics must undergo a conformity assessment by a Notified Body.
Depending on the relevant conformity assessment procedure, the Notified Body audits and examines the technical
documentation and the quality system for the manufacture, design and final inspection of the medical devices. The
Notified Body issues a CE Certificate of Conformity following successful completion of a conformity assessment
procedure conducted in relation to the medical device and its manufacturer and their conformity with the GSPRs. If the
related medicinal product has, or is in the process of, been authorized through the centralized procedure for the
authorization of medicinal products, the notified body will, before it can issue a CE Certificate of Conformity, be
required to seek a scientific opinion from the EMA on the suitability of the companion diagnostic for use in relation to the
medicinal product concerned. For medicinal products that have or are in the process of authorization through any other
route provided in EU legislation, the Notified Body must seek the opinion of the national competent authority of an EU
Member State. The CE Certificate of Conformity and the related conformity assessment process entitles the
manufacturer to affix the CE mark to its medical devices after having prepared and signed a related EC Declaration of
Conformity. Given our limited experience in developing and commercializing diagnostics, we do not plan to develop
companion diagnostics internally and thus will be dependent on the sustained cooperation and effort of third- party collaborators
in developing and obtaining approval for these companion diagnostics. We and our collaborators may encounter difficulties in
developing and obtaining approval or CE marking for the companion diagnostics, including issues relating to selectivity /
specificity, analytical validation, reproducibility, or clinical validation. Any delay or failure by our collaborators to develop or
obtain regulatory approval of or CE marking the companion diagnostics could delay or prevent approval of our product
candidates. In addition, we, our collaborators or third parties may encounter production difficulties that could constrain the
supply of the companion diagnostics, and both they and we may have difficulties gaining acceptance of the use of the
companion diagnostics in the medical community. If such companion diagnostics fail to gain market acceptance, it would have
an adverse effect on our ability to derive revenues from sales, if any, of any product candidate for which we obtain approval and
that requires a companion diagnostic test. In addition, any companion diagnostic collaborator or third party with whom we
contract may decide not to commercialize or to discontinue selling or manufacturing the companion diagnostic that we
anticipate using in connection with development and commercialization of our product candidates, or our relationship with such
collaborator or third party may otherwise terminate. We may not be able to enter into arrangements with another provider to
obtain supplies of an alternative diagnostic test for use in connection with the development and commercialization of our
product candidates or do so on commercially reasonable terms, which could adversely affect and / or delay the development or
commercialization of our product candidates. 92We We may pursue breakthrough therapy designation from the FDA for our
product candidates but such designation may not lead to a faster development or regulatory review or approval process, and it
would not increase the likelihood that our product candidates will receive marketing approval. We may in the future seek
breakthrough therapy designation for some of our product candidates. A breakthrough therapy is defined as a drug that is
intended, alone or in combination with one or more other drugs, to treat a serious or life- threatening disease or condition, and
preliminary clinical evidence indicates that the drug may demonstrate substantial improvement over existing therapies on one or
more clinically significant endpoints. For compounds that have been designated as breakthrough therapies, interaction and
communication between the FDA and the sponsor of the trial can help to identify the most efficient path for clinical
development while minimizing the number of patients placed in ineffective control regimens. Drugs designated as breakthrough
therapies by the FDA may also be eligible for accelerated approval. Designation as a breakthrough therapy is within the
discretion of the FDA. Accordingly, even if we believe one of our product candidates meets the criteria for designation as a
breakthrough therapy, the FDA may disagree and instead determine not to make such designation. We cannot be sure that any
evaluation we may make of our product candidates as qualifying for breakthrough therapy designation will meet the FDA's
expectations. In any event, the receipt of a breakthrough therapy designation for a product candidate may not result in a faster
```

```
development process, review or approval compared to drugs considered for approval under conventional FDA procedures and
does not assure ultimate approval by the FDA. In addition, even if one or more of our product candidates qualify as breakthrough
therapies, the FDA-91FDA may later decide that such product candidates no longer meet the conditions for qualification or
decide that the time period for FDA review or approval will not be shortened. We may seek Fast Track Designation by the FDA
for a product candidate that we develop, and we may be unsuccessful. If we are successful, the designation may not actually
lead to a faster development or regulatory review or approval process. We may seek Fast Track Designation for the product
candidates we develop. If a product is intended for the treatment of a serious or life- threatening condition and preclinical or
clinical data demonstrate the potential to address an unmet medical need for this condition, the product sponsor may apply for
Fast Track Designation. The FDA has broad discretion whether or not to grant this designation, so even if we believe a particular
product candidate is eligible for this designation, we cannot assure you that the FDA would decide to grant it. Even if we do
receive Fast Track Designation, as we have for single-vector-HB- 200 201 and alternating 2-vector HB- 202 / HB- 201, both in
combination with pembrolizumab, for the treatment of first- line advanced / metastatic HPV16 HNSCC, we may not experience
a faster development process, review or approval compared to conventional FDA procedures. The FDA may rescind the Fast
Track Designation if it believes that the designation is no longer supported by data from our clinical development program. We
may seek Orphan Drug Designation for product candidates we develop, and we may be unsuccessful or may be unable to
maintain the benefits associated with Orphan Drug Designation, including the potential for market exclusivity. As part of our
business strategy, we may seek Orphan Drug Designation for any product candidates we develop, and we may be unsuccessful.
Regulatory authorities in some jurisdictions, including the United States and the Europe European Union, may designate
drugs for relatively small patient populations as orphan drugs. Under the Orphan Drug Act, the FDA may designate a drug as an
orphan drug if it is a drug intended to treat a rare disease or condition, which is generally defined as a patient population of fewer
than 200, 000 individuals annually in the United States, or a patient population greater than 200, 000 in the United States where
there is no reasonable expectation that the cost of developing the drug will be recovered from sales in the United States. In the
United States, Orphan Drug Designation entitles a party to financial incentives such as opportunities for grant funding towards
clinical trial costs, tax advantages and user- fee waivers. Similarly, in Europe, the EC European Commission may grants-
grant orphan designation after receiving the opinion of the EMA Committee for Orphan Medicinal Products on an orphan
designation application. Orphan designation is intended to promote the development of drugs that are intended (i) for the
diagnosis, prevention or treatment of life- threatening or chronically 93debilitating -- debilitating conditions, (ii) either the
conditions <del>affecting ---</del> <mark>affect</mark> no more than 5 in 10, 000 persons in the EU <del>and for</del>- <mark>or <del>which no satisfactory method of</del></mark>
diagnosis, prevention, or treatment has been authorized (or the product would be a significant benefit to those affected).
Additionally, designation is granted for products intended for the diagnosis, prevention, or treatment of a life-threatening,
seriously debilitating or serious and chronic condition and when, without incentives the benefits derived from orphan status,
it is unlikely that sales of the product in the EU would be sufficient to justify the necessary investment in developing the product
, and (iii) there exists no satisfactory authorized method of diagnosis, prevention, or treatment of the condition that has
been authorized in the EU, or even if such method exists, the product will be of significant benefit to those affected by
that condition. In the EU, orphan designation entitles a party to a number of incentives, such as protocol assistance and
scientific advice specifically for designated orphan medicines, access to the centralized marketing authorization procedure,
and potential fee reductions or waivers depending on the status of the sponsor. Generally, if a drug with an orphan designation
subsequently receives the first marketing approval for the indication for which it has such designation, the drug is entitled to a
period of marketing exclusivity, which precludes the EMA or the FDA from approving another marketing application for the
same drug and indication for that time period, except in limited circumstances. Similarly, the EMA cannot accept another
marketing authorization application or accept an application to extend for a similar product and the European
Commission cannot grant a marketing authorization for the same indication. The applicable period is seven years in the
United States and ten years in <del>Europe <mark>the EU</mark> .</del> The EU exclusivity period can be reduced to six years if , at the end of the fifth
<mark>year,</mark> a drug no longer meets the criteria <del>for <mark>on the basis of which it received</mark> orphan designation <del>or if, including where it can</del></del>
be demonstrated on the basis of available evidence that the drug is sufficiently profitable such that market exclusivity is no
longer justified <mark>or where the prevalence of the condition has increased above the threshold . <del>Even <mark>92Even i</mark>f we</del> obtain</mark>
orphan drug exclusivity for a product candidate, that exclusivity may not effectively protect the product candidate from
competition because different therapies can be approved for the same condition and the same therapies can be approved for
different conditions but used off- label. Even after an orphan drug is approved, the FDA can subsequently approve the same
drug for the same condition if the FDA concludes that the later drug is clinically superior in that it is shown to be safer, more
effective or makes a major contribution to patient care. In addition, a designated orphan drug may not receive orphan drug
exclusivity if it is approved for a use that is broader than the indication for which it received orphan designation. Moreover,
orphan drug exclusive marketing rights in the United States may be lost if the FDA later determines that the request for
designation was materially defective or if the manufacturer is unable to assure sufficient quantity of the drug to meet the needs
of patients with the rare disease or condition. Orphan Drug Designation neither shortens the development time or regulatory
review time of a drug nor gives the drug any advantage in the regulatory review or approval process. Similar considerations
apply abroad. While we may seek Orphan Drug Designation for applicable indications for our current and any future product
candidates, we may never receive such designations. Even if we do receive such designations, there is no guarantee that we will
enjoy the benefits of those designations. Our business operations and current and future relationships with investigators, health
care professionals, consultants, third-party payors and customers will be subject, directly or indirectly, to federal and, state and
foreign healthcare fraud and abuse laws, false claims laws, health information privacy and security laws, and other healthcare
laws and regulations. If we are unable to comply, or have not fully complied, with such laws, we could face substantial
penalties. Although we do not currently have any products on the market, if we obtain FDA approval for our product candidates,
```

and begin commercializing those products in the United States, our operations may be directly, or indirectly through our prescribers, customers and third- party payors, subject to various U. S. federal and state healthcare laws and regulations, including, without limitation, the U. S. federal Anti- Kickback Statute, the U. S. federal civil and criminal false claims laws. federal health data privacy laws, and the Physician Payments Sunshine Act and regulations. Healthcare providers, physicians and others play a primary role in the recommendation and prescription of any products for which we obtain marketing approval. These laws may impact, among other things, our current business operations, including our clinical research activities, and proposed sales, marketing and education programs and constrain the business of financial arrangements and relationships with healthcare providers, physicians and other parties through which we market, sell and distribute our products for which we obtain marketing approval. In addition, we may be subject to patient data privacy and security regulation by both the U. S. federal government and the states in which we conduct our business. Finally, we may be subject to additional healthcare, statutory and regulatory requirements and enforcement by comparable foreign regulatory authorities in jurisdictions in which we conduct our business that may affect our ability to operate. See "Business - Other U. S. Healthcare Laws." The scope and enforcement of each of these laws is uncertain and subject to rapid change in the current environment of healthcare reform, especially in light of the lack of applicable precedent and regulations. Federal and state enforcement bodies have recently increased their scrutiny of interactions between healthcare companies and healthcare providers, which has led to a number of investigations, prosecutions, convictions and settlements in the 94healthcare industry. Ensuring business arrangements comply with applicable healthcare laws, as well as responding to possible investigations by government authorities, can be time- and resourceconsuming and can divert a company's attention from the business. Ensuring that our internal operations and future business arrangements with third parties comply with applicable healthcare laws and regulations will involve substantial costs. It is possible that governmental and regulatory authorities will conclude that our business practices do not comply with current or future statutes, regulations, agency guidance or case law involving applicable fraud and abuse or other healthcare laws and regulations. If our operations are found to be in violation of any of the laws described above or any other governmental laws and regulations that may apply to us, we may be subject to significant penalties, including civil, criminal and administrative penalties, damages, fines, exclusion from U. S. government funded healthcare programs, such as Medicare and Medicaid, or similar programs in other countries or jurisdictions, disgorgement, individual imprisonment, contractual damages, reputational harm, diminished profits, additional reporting requirements and oversight if we become subject to a corporate integrity agreement or similar agreement to resolve allegations of non-compliance with these laws and the delay, reduction, termination 93termination or curtailment or restructuring of our operations. Further, defending against any such actions can be costly and time- consuming, and may require significant financial and personnel resources. Therefore, even if we are successful in defending against any such actions that may be brought against us, our business may be impaired. If any of the physicians or other providers or entities with whom we expect to do business is found to not be in compliance with applicable laws, they may be subject to criminal, civil or administrative sanctions, including exclusions from government funded healthcare programs and imprisonment. If any of the above occur, our ability to operate our business and our results of operations could be adversely affected. Outside the United States, interactions between pharmaceutical companies and health care professionals are also governed by strict laws, such as national anti- bribery laws of European countries, national sunshine rules, regulations, industry self- regulation codes of conduct and physicians' codes of professional conduct. Failure to comply with these requirements could result in reputational risk, public reprimands, administrative penalties, fines or **imprisonment.** The provision of benefits or advantages to physicians to induce or encourage the prescription, recommendation, endorsement, purchase, supply, order or use of medicinal products is generally not permitted in the countries that form part of the European Union, Some European Union Member States, and the United Kingdom, through the United Kingdom Bribery Act 2010, have enacted laws explicitly prohibiting the provision of these types of benefits and advantages. Infringements of these laws can result in substantial fines and imprisonment. Payments made to physicians in certain European Union Member States (e. g., France or Belgium) must be publicly disclosed. Moreover, agreements with physicians may often must be the subject of prior notification and approval by the physician's employer, his or her competent professional organization and / or the regulatory authorities of the individual European Union Member States. These requirements are provided in the European Union Member State national laws, industry codes (e. g. the European Federation of Pharmaceutical Industries and Associations Disclosure and Healthcare Professionals Codes) or professional codes of conduct. Failure to comply with these requirements could result in reputational risk, public reprimands, administrative penalties, fines or imprisonment. Obtaining and maintaining regulatory approval of our product candidates in one jurisdiction does not mean that we will be successful in obtaining regulatory approval of our product candidates in other jurisdictions. Obtaining and maintaining regulatory approval of a product candidate in one jurisdiction does not guarantee that we will be able to obtain or maintain regulatory approval for that product candidate in any other jurisdiction, while a failure or delay in obtaining regulatory approval in one jurisdiction may have a negative effect on the regulatory approval process in others. For example, in order to market and sell our drugs in the European Union and many other jurisdictions, we, and any collaborators we may have in the future, must obtain separate marketing approvals and comply with numerous and varying regulatory requirements. The approval procedure varies among countries and can involve additional testing. The time required to obtain approval may differ substantially from that required to obtain FDA approval. The marketing approval process outside of the United States generally includes all of the risks associated with obtaining FDA approval. In addition, in many countries outside of the United States, it is required that the drug be approved for reimbursement before the drug can be approved for sale in that country. In some cases, the price that we intend to charge for our products is also subject to regulatory approval. We, and any collaborators we may have in the future, may not obtain approvals from regulatory authorities outside of the United States on a timely basis, if at all. 95European -- European data collection and processing is governed by restrictive regulations governing the use, processing and cross-border transfer of personal information. The collection, use, storage, disclosure, transfer or other processing of personal data, including personal health data

```
regarding individuals in the EEA is governed by the EU GDPR. The EU GDPR is wide ranging in scope and imposes several
requirements on companies that process personal data, including requirements relating to the consent of the individuals to whom
the personal data relates, the information provided to the individuals, notification of data processing obligations to the
competent national data protection authorities and the security and confidentiality of the personal data. Failure to comply with
the requirements of the EU Data Protection Directive, the GDPR, and the related national data protection laws of the EU
Member States may result in fines and other administrative penalties, including potential fines of up to € 20 million or 4 % of
annual global revenues, whichever is greater, for breach or non-compliance. In 94In addition, further to the UK's exit from the
EU on January 31, 2020, the EU GDPR ceased to apply in the UK at the end of the transition period on December 31, 2020.
However, as of January 1, 2021, the UK's European Union (Withdrawal) Act 2018 incorporated the EU GDPR (as it existed on
December 31, 2020 but subject to certain UK specific amendments) into UK law, referred to as the UK GDPR. The UK GDPR
and the UK Data Protection Act 2018 set out the UK's data protection regime, which is independent from but aligned to the
EU's data protection regime. Non-compliance with the UK GDPR may result in monetary penalties of up to £ 17.5 million or
4 % of worldwide revenue, whichever is higher. Although the EU GDPR and the UK GDPR currently impose substantially
similar obligations, it is possible that over time the UK GDPR could become less aligned with the EU GDPR. The UK
government has announced plans to reform the data protection legal framework in the UK in its Data Reform Protection and
Digital Information Bill but those have been put on hold. The potential misalignment between This lack of clarity on future
UK laws and regulations and their interaction with EU laws and regulations could add legal risk, uncertainty, complexity and
cost to our handling of EU / UK personal information and our privacy and data security compliance programs and could require
us to implement different compliance measures for the UK and the EU. The EU GDPR also imposes strict rules on the transfer
of personal data out of the EEA, including to the United States. Although the UK is regarded as a third country under the EU
GDPR, the EC, has now issued a decision recognizing the UK as providing adequate protection under the EU GDPR and,
therefore, transfers of personal data originating in the EU to the UK remain unrestricted. Like the EU GDPR, the UK GDPR
restricts personal data transfers outside the UK to countries not regarded by the UK as providing adequate protection. The UK
government has confirmed that personal data transfers from the UK to the EEA remain free flowing. To enable the transfer of
personal data outside of the EEA or the UK, adequate safeguards must be implemented in compliance with EU and UK data
protection laws. <mark>There are currently various mechanisms that may be used to transfer personal <del>On June 4, 2021, the EC</del></mark>
issued new forms of standard contractual clauses for data transfers from controllers or processors the EEA and UK to the
United States in compliance with law, such as the EU/EEA (or otherwise subject to the GDPR) to controllers or processors
established outside the EU / EEA (and not subject to the GDPR). The new standard contractual clauses replace the standard
contractual clauses that were adopted previously under the EU Data Protection Directive. The UK is not subject to the EC's
new standard Standard contractual Contractual clauses Clauses, but has published the UK 's International Data Transfer
Agreement <mark>/ Addendum,</mark> and <del>International the EU- U. S.</del> Data <del>Transfer Addendum to <mark>Privacy Framework and</mark> the <mark>UK</mark></del>
Extension thereto new standard contractual clauses-( HDTA-which allows for transfers for relevant U. S.- based
organizations who self- certify compliance and participate in the Framework). However, which enable transfers from the
these <del>UK. mechanisms are subject to legal challenges, and there is no assurance that we can satisfy For-</del> or rely <del>new</del>
transfers, the IDTA already needs to be in place, and must be in place for all existing transfers from the UK from March 21,
2024. Following a ruling from the Court of Justice of the EU, in Data Protection Commissioner v Facebook Ireland Limited and
Maximillian Schrems, Case C-311/18 (Schrems II), companies relying on these measures standard contractual clauses to
govern lawfully transfers— transfer of personal data to third countries (in particular the United States) will need to assess
whether the data importer can ensure sufficient guarantees for safeguarding the personal data under GDPR. This assessment
includes assessing whether third party vendors can also ensure these guarantees. The EU same assessment is required for
transfers governed by the IDTA. We will be required to implement these new safeguards when conducting restricted data
transfers under the GDPR and doing so will require significant effort and cost. The GDPR and UK GDPR also confer a private
right of action on data subjects and consumer associations to lodge complaints with supervisory authorities, seek judicial
remedies, and obtain compensation for damages resulting from violations of the EU GDPR and UK GDPR. The EU GDPR and
UK GDPR regulations may impose additional responsibility and liability in relation to personal data that we process, and we
may be required to put in place additional mechanisms ensuring compliance with these and / or new data protection rules. This
may be onerous and adversely affect our business, financial condition, prospects and results of operations. Compliance with the
EU GDPR and UK GDPR will be a rigorous and time- intensive process that may increase our cost of doing business or require
us to change our business 96practices -- practices, and despite those efforts, there is a risk that we may be subject to fines and
penalties, litigation, and reputational harm in connection with our European activities. Our business activities may be subject to
the Foreign Corrupt Practices Act and similar anti- bribery and anti- corruption laws. Our business activities may be subject to
the FCPA and similar anti- bribery or anti- corruption laws, regulations or rules of other countries in which we operate,
including the U. K. Bribery Act. The FCPA generally prohibits offering, promising, giving, or authorizing others to give
anything of value, either directly or indirectly, to a non-U. S. government official in order to influence official action, or
otherwise obtain or retain business. The FCPA also requires public companies to make and keep books and records that
accurately and fairly reflect the transactions of the corporation and to devise and maintain an adequate system of internal
accounting controls. The anti- bribery provisions of the FCPA are enforced primarily by the Department of Justice (DOJ) and
the Securities and Exchange Commission, (SEC) is involved with enforcement of the books and records provisions of the FCPA
and may suspend or bar issuers from trading securities on U. S. exchanges for violations of the FCPA's accounting provisions.
Recently the SEC and DOJ have increased their FCPA enforcement activities with respect to pharmaceutical companies. Our
business is heavily regulated and therefore involves significant interaction with public officials, including officials of non-U.S.
governments. Additionally, in many other countries, the health care providers who prescribe pharmaceuticals are employed by
```

their government, and the purchasers of pharmaceuticals are government entities; therefore, our dealings with these prescribers and purchasers are subject to regulation under the FCPA. There 15 no certainty that all of our employees, agents, contractors, or collaborators, or those of our affiliates, will comply with all applicable laws and regulations, particularly given the high level of complexity of these laws. Violations of these laws and regulations could result in fines, criminal sanctions against us, our officers, or our employees, the closing down of our facilities, requirements to obtain export licenses, cessation of business activities in sanctioned countries, implementation of compliance programs, and prohibitions on the conduct of our business. Any such violations could include prohibitions on our ability to offer our products in one or more countries and could materially damage our reputation, our brand, our international expansion efforts, our ability to attract and retain employees, and our business, prospects, operating results, and financial condition. Our ability to utilize our foreign net operating loss carryforwards may be limited by GILTI taxation introduced through the tax reform. We have incurred substantial losses during our operating history. We do not anticipate generating revenue from sales of products for the foreseeable future, if ever, and we may never achieve profitability. To the extent that we continue to generate taxable losses, unused losses will carry forward to offset future taxable income, if any, until such unused losses expire. The tax reform legislation introduced section 951A, a new tax on so- called "global intangible low- taxed income," or GILTI. GILTI applies to income of a controlled foreign corporation (CFC) that is not otherwise subpart F income. Our Austrian subsidiary is expected to be treated as a CFC and GILTI taxation may therefore apply when use of foreign net operating loss carryforwards reduce our foreign income tax to a low level. Tax benefits from the use of our foreign net operating loss carryforwards could be partially offset by U. S. GILTI taxation, which could have an adverse effect on our future results of operations. Changes to section 174 capitalization rules through the tax reform may impact our ability to immediately deduct research and development expenses, leading to higher taxable income and effective income tax payments even before reaching profitabilityThe tax reform legislation also altered section 174, by requiring that, beginning with the year 2022, research and development expenses be capitalized and amortized over five years for expenditures incurred in the U.S. and 15 years for expenditures incurred outside the U.S. Therefore, our ability to use research and development expenses to offset revenue in the coming years, may be limited, and we may be required to record taxable income while our business is actually still loss- making. The resulting tax payments could have an adverse effect on our future results of operations. 97Risks-- Risks Related to Our Intellectual PropertyOur rights to develop and commercialize our product candidates are subject, in part, to the terms and conditions of licenses granted to us by others, and, if we fail to comply with our obligations under these arrangements or resolve related disputes, we could lose such intellectual property rights or owe damages to the licensor of such intellectual property. We are dependent on patents, know- how and proprietary technology, both our own and licensed from others. We license patents related to our non-replicating and replicating technologies and certain other intellectual property rights from third parties, including from the University of Geneva, the University of Basel and, the University of Zurich and the University of Minnesota and expect in the future to be party to other material license or collaboration agreements. These agreements typically impose numerous obligations, such as diligence and payment obligations, including in relation to revenues we may receive from any sublicenses we grant in respect of the licensed patents. If we fail to comply with our obligations under these agreements, our licensors may have the right to terminate our licenses, in which event we might not be able to develop, manufacture or market any product that is covered by the intellectual property we in-license from such licensor and may face other adverse consequences. These licenses do and future licenses may also include provisions that impose obligations and restrictions on us that could delay or otherwise negatively impact a transaction that we may wish to enter into. Disputes 96Disputes may also arise between us and our licensors regarding the license agreements we have with them, including with respect to: • the proper interpretation of the license agreement terms, including with respect to our right to sublicense patent rights and any other intellectual property rights to third parties and the amount of fees owed to the licensors as a result of such sublicenses; • our diligence obligations with respect to the use of the licensed technology in relation to our development and commercialization of our product candidates, and what activities satisfy those diligence obligations; and • the ownership of inventions and know-how created by us and our partners using a combination of our own intellectual property and that licensed from our licensors. If disputes arise that prevent or impair our ability to maintain our current licensing arrangements on acceptable terms, we may be unable to successfully develop and commercialize the affected product candidates. We are generally also subject to all of the same risks with respect to protection of intellectual property that we license as we are for intellectual property that we own, which are described below. If we or our licensors fail to adequately protect this intellectual property, our ability to commercialize products could suffer. If our efforts to protect the proprietary nature of the intellectual property related to our technologies are not adequate, we may not be able to compete effectively in our market. We rely upon a combination of patents, confidentiality agreements, trade secret protection and license agreements to protect the intellectual property related to our technologies. Such means may afford only limited protection of our intellectual property and may not: (i) prevent our competitors from duplicating our technology or product candidates; (ii) prevent our competitors from gaining access to our proprietary technology; or (iii) permit us to gain or maintain a competitive advantage. We face the risk of potential unauthorized disclosure or misappropriation of our intellectual property by the third parties to which we grant access to such intellectual property, which may reduce our trade secret protection and allow our potential competitors to access and exploit our proprietary technology. These third parties also may use our proprietary information and intellectual property in such a way as to invite litigation or other intellectual property- related proceedings that could jeopardize or invalidate our proprietary information and intellectual property. Any disclosure to or misappropriation by third parties of our confidential proprietary information 98could -- could enable competitors to quickly duplicate or surpass our technological achievements, thus eroding our competitive position in our market. Our success depends in large part on our ability to obtain and maintain patent protection with respect to our non-replicating technology, our replicating technology, including our HB- 200 and 101 product candidate, obtain patent protection with respect to our replicating technology, including our HB- 700 201, HB-202 and HB-300 product candidates, the vaccine product candidates we are developing with Gilead for HBV (HB-400) and

```
HIV (HB- 500), and other proprietary product candidates. Although we own or license from others certain patents and patent
applications that cover some of the foregoing technologies and product candidates, we do not currently own or license from
others issued patents covering all of the foregoing technologies and product candidates. Our reliance on patent applications
carries certain risks associated with pending patent applications prior to the issuance of patents, as described below. If we do not
adequately obtain and protect our intellectual property rights, competitors may be able to erode, negate or preempt any
competitive advantage we may have, which could harm our business and ability to achieve profitability. To protect our
proprietary position, we file patent applications in the United States and abroad related to our product candidates that are
important to our business. The patent application and approval process is expensive and time- consuming and we may not be
able to file and prosecute all necessary or desirable patent applications at a reasonable cost or in a timely manner. We cannot
predict: • if and when patents will issue from our patent applications; 97 • the degree and range of protection any patents that
we obtain will afford us against competitors, including whether third parties will find ways to invalidate or otherwise circumvent
our patents; • whether or not others will obtain patents claiming aspects similar to those covered by our patents and patent
applications; or ● whether we will need to initiate litigation or administrative proceedings related to obtaining, protecting or
enforcing our patents, which may be costly whether we win or lose. We cannot be certain that the claims in our pending patent
applications covering composition of matter of our product candidates will be considered patentable by the USPTO or by patent
offices in foreign countries, or that the claims in any of our issued patents will be considered patentable by courts in the United
States or foreign countries. Certain of our issued patents and pending applications are method of use patents, which protect the
use of a product for a specified method. This type of patent does not prevent a competitor from making and marketing a product
that is identical to our product for an indication that is outside the scope of the patented method. Moreover, even if competitors
do not actively promote their product for our targeted indications, physicians may prescribe these products "off-label."
Although off- label prescriptions may induce or contribute to the infringement of method of use patents, the practice is common
and such infringement is difficult to prevent or prosecute. The patent position of biopharmaceutical companies generally is
highly uncertain, involves complex legal and factual questions, and has been the subject of much litigation in recent years. As a
result, the issuance, scope, validity, enforceability, and commercial value of our patent rights may be uncertain. The patent
applications that we own or in-license may fail to result in issued patents with claims that cover our product candidates or uses
thereof in the United States or in other foreign countries. Even if patents do successfully issue from such applications, third
parties may challenge the validity, enforceability or scope thereof, which may result in such patents being narrowed, invalidated
or held unenforceable. If our patents are rendered invalid or unenforceable, or narrowed in scope, the patent coverage afforded
our products could be impaired. Such impairment could significantly impede our ability to market our products, negatively
affect our competitive position and harm our business and operating results. In addition, changes in either the patent laws or
interpretation of the patent laws in the United States and other countries may diminish the value of our patents or narrow the
scope of our patent protection. In addition, the laws of foreign countries may not protect our rights to the same extent or in the
same manner as the laws of the United States. For example, patent laws in various jurisdictions, including significant
commercial markets such as Europe, restrict the patentability of methods of treatment of the human body more than United
States law does. Furthermore, even if they are unchallenged, our patents and patent applications may not adequately protect our
intellectual property or prevent others from designing around our patent protection. No assurances can be given that third parties
will not create new products or methods that achieve similar 99results -- results without infringing upon patents we own. If
these developments were to occur, it could have an adverse effect on our sales or market position. If the breadth or strength of
protection provided by the patents and patent applications we hold with respect to our product candidates is threatened, it could
dissuade companies from collaborating with us to develop, and threaten our ability to commercialize, our product candidates. If
we enter into additional collaboration agreements and strategic partnerships or license our product candidates, we may not be
able to realize the benefit of such transactions if we are unable to successfully integrate them with our existing operations and
company culture, which could delay our timelines or otherwise adversely affect our business. We also cannot be certain that,
following a strategic transaction or license, we will achieve the revenue or specific net income that justifies such transaction.
Any delays in entering into new collaborations or strategic partnership agreements related to our product candidates could delay
the development and commercialization of our product candidates in certain geographies for certain indications, which would
harm our business prospects. Given the amount of time required for the development, testing and regulatory review of new
product candidates, patents protecting such candidates might expire before or shortly after such candidates are
commercialized. Further, if we encounter delays in our clinical trials, the period of time during which we could market our
product candidates under patent protection would be reduced . Depending upon the timing, duration and conditions of FDA
marketing approval of our product candidates, one or more of our United States patents may be eligible for limited
patent term extension under the Drug Price Competition and Patent Term Restoration Act of 1984, referred to as the
98Hatch- Waxman Amendments, and similar legislation in the European Union. The Hatch- Waxman Amendments
permit a patent term extension of up to five years for a patent covering an approved product as compensation for
effective patent term lost during product development and the FDA regulatory review process. A patent term extension
cannot extend the remaining term of a patent beyond a total of 14 years from the date of product approval. Only one
patent may be extended, and only those claims covering the approved drug, a method for using it, or a method for
manufacturing it may be extended. However, we may not receive an extension if we fail to apply within applicable
deadlines, fail to apply prior to expiration of relevant patents or otherwise fail to satisfy applicable requirements.
Moreover, the length of the extension could be less than we request. If we are unable to obtain patent term extension or
the term of any such extension is less than we request, the period during which we can enforce our patent rights for that
product will be shortened and our competitors may obtain approval to market competing products sooner. As a result,
<mark>our revenue from applicable products could be reduced and could have a material adverse effect on our business</mark> . Since
```

```
patent applications in the United States and most other countries are confidential for a period of time after filing, we cannot be
certain that we were the first to file any patent application related to our product candidates. Furthermore, for U. S. applications
in which all claims are entitled to a priority date before March 16, 2013, an interference proceeding can be provoked by a third-
party or instituted by the USPTO, to determine who was the first to invent any of the subject matter covered by the patent
claims of our applications. It is also possible for third parties to file observations with various patent offices during the
patent application process. Various post grant review proceedings, such as interpartes review and post grant review in the
United States and opposition proceedings at the EPO, are available for any interested third party to challenge the
patentability of claims issued in patents to us. Some of These these procedures are relatively new and can be unpredictable. He
For example, the EP' 504 Patent, which is also possible for owned by the University of Geneva and is exclusively licensed
to us, was opposed by a third parties to file observations with various party at the EPO. The Opposition Division of the
EPO eventually dismissed the opposition and maintained the patent as offices during the patent application process. In our
European patent application directed to our non-replicating technology, an unknown third party submitted such an observation.
Despite that submission, the European Patent Office proceeded to grant granted our patent. In addition to the protection
afforded by patents, we seek to rely on trade secret protection, confidentiality agreements, and license agreements to protect
proprietary know- how that is not patentable, processes for which patents are difficult to enforce and any other elements of our
product discovery and development processes that involve proprietary know-how, information, or technology that is not
covered by patents. Although we require all of our employees to assign their inventions to us, and require all of our employees,
consultants, advisors and any third parties who have access to our proprietary know- how, information, or technology to enter
into confidentiality agreements, we cannot be certain that our trade secrets and other confidential proprietary information will
not be disclosed or that competitors will not otherwise gain access to our trade secrets or independently develop substantially
equivalent information and techniques. Furthermore, the laws of some foreign countries do not protect proprietary rights to the
same extent or in the same manner as the laws of the United States. As a result, we may encounter significant problems in
protecting and defending our intellectual property both in the United States and abroad. If we are unable to prevent unauthorized
material disclosure of our intellectual property to third parties, we will not be able to establish or maintain a competitive
advantage in our market, which could materially adversely affect our business, operating results and financial condition. Third-
party claims of intellectual property infringement may prevent or delay our product discovery and development efforts. Our
commercial success depends in part on our avoiding infringement of the patents and proprietary rights of third parties. There is a
substantial amount of litigation involving patents and other intellectual property rights in the biotechnology and pharmaceutical
industries, as well as administrative proceedings for challenging patents, including interference, reexamination, inter partes
review and post grant review proceedings before the USPTO or oppositions and other comparable proceedings in foreign
jurisdictions. Numerous U. S. and foreign issued patents and pending patent applications, which are owned by third parties,
exist in the fields in which we are developing our product candidates. As the biotechnology and pharmaceutical industries
expand and more patents are issued, the risk increases that our product candidates may give rise to claims of infringement of the
patent rights of others. 100Third--- Third parties may assert that we are employing their proprietary technology without
authorization. Generally, conducting clinical trials and certain other development activities in the United States is not considered
an act of infringement. If and when any of our another product candidates are approved by the FDA, a third party may then seek
to enforce 99enforce its patent by filing a patent infringement lawsuit against us. While we are aware of certain third-party
patents and applications that relate to similar subject matter as our technologies, we do not believe that any patent claims that
could otherwise materially adversely affect commercialization of our product candidates, if approved, are valid and enforceable.
We may be incorrect in this belief, or we may not be able to prove it in a litigation. In this regard, patents issued in the United
States by law enjoy a presumption of validity that can be rebutted only with evidence that is "clear and convincing," a
heightened standard of proof. There may be third- party patents of which we are currently unaware which cover materials,
formulations, methods of manufacture or methods for treatment related to the use or manufacture of our product candidates.
Because patent applications can take many years to issue, there may be currently pending patent applications which may later
result in issued patents that our product candidates may infringe. In addition, third parties may obtain patents in the future and
claim that use of our technologies infringes upon these patents. Moreover, we may fail to identify relevant patents or incorrectly
conclude that a patent is invalid, not enforceable, exhausted, or not infringed by our activities. If any third- party patents were
held by a court of competent jurisdiction to cover the manufacturing process of our product candidates, constructs or molecules
used in or formed during the manufacturing process, or any final product itself, the holders of any such patents may be able to
block our ability to commercialize the product candidate unless we obtained a license under the applicable patents, or until such
patents expire or they are determined to be held invalid or unenforceable. Similarly, if any third- party patent were held by a
court of competent jurisdiction to cover aspects of our formulations, processes for manufacture or methods of use, including
combination therapy or patient selection methods, the holders of any such patent may be able to block our ability to develop and
commercialize the product candidate unless we obtained a license, which may not be available on commercially reasonable
terms, if at all, or until such patent expires or is determined to be invalid or unenforceable. If we are unable to obtain a necessary
license to a third- party patent on commercially reasonable terms, or at all, our ability to commercialize our product candidates
may be impaired or delayed, which could in turn significantly harm our business. Parties making claims against us may seek and
obtain injunctive or other equitable relief, which could effectively block our ability to further develop and commercialize our
product candidates. Defense of these claims, regardless of their merit, could involve substantial litigation expense and would be
a substantial diversion of employee resources from our business. In the event of a successful claim of infringement against us,
we may have to pay substantial damages, including treble damages and attorneys' fees for willful infringement, obtain one or
more licenses from third parties, pay royalties or redesign our infringing products, which may be impossible or require
substantial time and monetary expenditure. We cannot predict whether any such license would be available at all or whether it
```

```
would be available on commercially reasonable terms. Furthermore, even in the absence of litigation, we may need or may
choose to obtain licenses from third parties to advance our research or allow commercialization of our product candidates. We
may fail to obtain any of these licenses at a reasonable cost or on reasonable terms, if at all. In that event, we would be unable to
further develop and commercialize our product candidates, which could harm our business significantly. We may not be
successful in obtaining or maintaining necessary rights to product components and processes for our development pipeline
through acquisitions and in-licenses. Presently we have rights to certain intellectual property, through licenses from third parties
and under patents and / or patent applications that we own or will own, related to HB- 101 200, HB- 201 and 700, HB- 202
400, HB-500 and certain other product candidates. Because additional product candidates may require the use of proprietary
rights held by third parties, such as the rights to use certain antigens that are, specific to future disease targets, the growth of
our business will likely depend in part on our ability to acquire, in-license or use these proprietary rights. In addition, while we
have patent rights directed to certain non-replicating and replicating technologies we may not be able to obtain intellectual
property to all uses of non-replicating and replicating technologies. Our product candidates may also require specific
formulations to work effectively and efficiently and these rights to such formulations may be held by others. Similarly,
efficient production or delivery of our product candidates may also require specific compositions or methods, and the rights to
these compositions or methods may be owned by third parties. We may be unable to acquire or in-license any compositions,
methods of use, processes or other third-party intellectual property rights from third parties that we identify. Even if we are able
to obtain a license to use such intellectual property, it may be non- exclusive, which would not restrict the licensor party from
giving our competitors access to the same technologies licensed to us. In that event, we may be required to expend significant
time and resources to develop or 101license replacement technology. Moreover, the specific antigens that will be used
with our product candidates may be covered by the intellectual property rights of others. The 100The licensing and acquisition
of third- party intellectual property rights is a competitive area, and companies, which may be more established, or have greater
resources than we do, may also be pursuing strategies to license or acquire third- party intellectual property rights that we may
consider necessary or attractive in order to commercialize our product candidates. More established companies may have a
competitive advantage over us due to their size, cash resources and greater clinical development and commercialization
capabilities. We may be involved in lawsuits to protect or enforce our patents or the patents of our licensors, which could be
expensive, time- consuming and unsuccessful. Competitors may infringe our patents or the patents of our licensors. To counter
infringement or unauthorized use, we may be required to file infringement claims, which can be expensive and time-consuming.
In addition, in an infringement proceeding, a court may decide that one or more of our patents is not valid or is unenforceable, or
may refuse to stop the other party from using the technology at issue on the grounds that our patents do not cover the
technology in question. An adverse result in any litigation or defense proceedings could put one or more of our patents at risk of
being invalidated, held unenforceable, or interpreted narrowly and could put our patent applications at risk of not issuing.
Defense of these claims, regardless of their merit, would involve substantial litigation expense and would be a substantial
diversion of employee resources from our business. In the event of a successful claim of infringement against us, we may have
to pay substantial damages, including treble damages and attorneys' fees for willful infringement, obtain one or more licenses
from third parties, pay royalties or redesign our infringing products, which may be impossible or require substantial time and
monetary expenditure. For certain of our in-licensed patent rights, such as patent rights in-licensed from the University
of Geneva, the University of Basel and the University of Zurich, we may not have the right to file a lawsuit for
infringement and may have to rely on a licensor to enforce these rights for us. If we are not able to directly assert our
licensed patent rights against infringers or if a licensor does not vigorously prosecute any infringement claims on our
behalf, we may have difficulty competing in certain markets where such potential infringers conduct their business, and
our commercialization efforts may suffer as a result. Post- grant proceedings, including interference proceedings, provoked
by third parties or brought by the USPTO may be necessary to determine the validity or priority of inventions with respect to our
patents or those of our licensors. An unfavorable outcome could result in a loss of our current patent rights and could require us
to cease using the related technology or to attempt to license rights to it from the prevailing party. Our business could be harmed
if the prevailing party does not agree to a license on commercially reasonable terms or at all. Litigation or post-grant
proceedings may result in a decision adverse to our interests and, even if we are successful, may result in substantial costs and
distract our management and other employees. We may not be able to prevent, alone or with our licensors, misappropriation of
our trade secrets or confidential information, particularly in countries where the laws may not protect those rights as fully as in
the United States. Furthermore, because of the substantial amount of discovery required in connection with intellectual property
litigation, there is a risk that some of our confidential information could be compromised by disclosure during this type of
litigation. In addition, there could be public announcements of the results of hearings, motions or other interim proceedings or
developments. If securities analysts or investors perceive these results to be negative, it could have a substantial adverse effect
on the price of our common stock. Obtaining and maintaining our patent protection depends on compliance with various
procedural, document submission, fee payment and other requirements imposed by governmental patent agencies, and our patent
protection could be reduced or eliminated for non- compliance with these requirements. Periodic maintenance fees, renewal
<mark>fees, annuity fees and various other government fees</mark> on <del>any issued patents and / or</del> patent <del>are applications will be</del> due to be
paid to the USPTO and foreign patent agencies in several stages over the lifetime of the our patents and / or patent
applications and any patent rights we may obtain in the future. The USPTO and various foreign governmental patent
agencies require compliance with a number of procedural, documentary, fee payment and other similar provisions during the
patent application process. While an inadvertent lapse can in many cases be cured by payment of a late fee or by other means in
accordance with the applicable rules, there are situations in which noncompliance 101noncompliance can result in
abandonment or lapse of the patent or patent application, resulting in partial or complete loss of patent rights in the relevant
jurisdiction. Noncompliance events that could result in abandonment or lapse of a patent or patent application include, but are
```

not limited to, failure to respond to official actions within prescribed time limits, non-payment of fees and failure to properly legalize and submit formal documents. In such an event, our competitors might be able to enter the market, which would have a material adverse effect on our business. 102Issued patents covering our product candidates could be found invalid or unenforceable if challenged in court or the USPTO. If we or one of our licensing partners initiate legal proceedings against a third party to enforce a patent covering one of our product candidates, the defendant could counterclaim that such patent is invalid and / or unenforceable. In patent litigation in the United States, defendant counterclaims alleging invalidity and / or unenforceability are commonplace, and there are numerous grounds upon which a third party can assert invalidity or unenforceability of a patent. Third parties may also raise similar claims before administrative bodies in the United States or abroad, even outside the context of litigation. Such mechanisms include re-examination, inter partes review, post grant review, and equivalent proceedings in foreign jurisdictions (e.g., opposition proceedings). Such proceedings could result in revocation or amendment to our patents in such a way that they no longer cover our product candidates. The outcome following legal assertions of invalidity and unenforceability is unpredictable. With respect to the validity question, for example, we cannot be certain that there is no invalidating prior art, of which we, our patent counsel and the patent examiner were unaware during prosecution. If a defendant were to prevail on a legal assertion of invalidity and / or unenforceability, we would lose at least part, and perhaps all, of the patent protection on our product candidate. Such a loss of patent protection could have a material adverse impact on our business. Changes in U. S. patent law could diminish the value of patents in general, thereby impairing our ability to protect our products. As is the case with other biopharmaceutical companies, our success is heavily dependent on intellectual property, particularly patents. Obtaining and enforcing patents in the biotechnology or pharmaceutical industry involve both technological and legal complexity, and is therefore costly, time-consuming and inherently uncertain. In addition, the United States continues to adapt to wide- ranging patent reform legislation that became effective starting in 2012. Moreover, recent U. S. Supreme Court rulings have narrowed the scope of patent protection available in certain circumstances and weakened the rights of patent owners in certain situations. In addition to increasing uncertainty with regard to our ability to obtain patents in the future, this combination of events has created uncertainty with respect to the value of patents, once obtained. Furthermore, the specific content of patents and patent applications that are necessary to support and interpret patent scope is highly uncertain due to the complex nature of the relevant legal, scientific, and factual issues. Changes in either patent laws or interpretations of patent laws in the United States and other countries may diminish the value of our intellectual property or narrow the scope of our patent protection. Depending on decisions by the U.S. Congress, the federal courts, and the USPTO, the laws and regulations governing patents could change in unpredictable ways that would weaken our ability to obtain new patents or to enforce our existing patents and patents that we might obtain in the future. Changes in the laws and regulations governing patents in other jurisdictions could similarly have an adverse effect on our ability to obtain and effectively enforce our patent rights. For example, the Biden administration recently indicated its support for a proposal at the World Trade Organization to waive patent rights with respect to COVID-19 vaccines. Any waiver of our patent or other intellectual property protection by the U. S. and other foreign governments could have a material adverse effect on our competitive position, business, financial condition and results of operations. For example, recent decisions raise questions regarding the award of patent term adjustment (PTA) for patents in families where related patents have been issued without PTA. Thus, it cannot be said with certainty how PTA will or will not be viewed in the future and whether patent expiration dates may be impacted. In addition, the European patent system is relatively stringent in the type of amendments that are allowed during prosecution, but, the complexity and uncertainty of European patent laws has also increased in recent years. For example, in Europe, a new unitary patent system took effect June 1, 2023, which will significantly impact European patents, including those granted before the introduction of such a system. Under the unitary patent system, European applications have the option, upon grant of a patent, of becoming a Unitary Patent which will be subject to the jurisdiction of the Unitary Patent Court (UPC). As the UPC is a new court system, there is no precedent for the court, 102 increasing the uncertainty of any litigation. Patents granted before the implementation of the UPC have the option of opting out of the jurisdiction of the UPC and remaining as national patents in the UPC countries. Patents that remain under the jurisdiction of the UPC will be potentially vulnerable to a single UPC- based revocation challenge that, if successful, could invalidate the patent in all countries who are signatories to the UPC. We cannot predict with certainty the long- term effects of any potential changes. Complying with these laws and regulations could limit our ability to obtain new patents in the future that may be important for our business. We have less robust intellectual property rights in certain foreign jurisdictions and may not be able to protect our intellectual property rights throughout the world. Certain of our key patent families have been filed in the United States, as well as in numerous jurisdictions outside the United States. However, our intellectual property rights in certain jurisdictions outside the United States may be less robust. Filing, prosecuting and defending patents on product candidates in all countries throughout the world would be prohibitively expensive. In addition, the laws of some foreign countries do not protect intellectual property rights to the same extent as federal and state laws in the United States. Consequently, we may not be able to prevent third parties from practicing our inventions in certain countries outside the United States, or from selling or importing products made using our inventions in and into the United States or other jurisdictions. Competitors may use our technologies in jurisdictions where we have not obtained patent protection to develop their own products and may export otherwise infringing products to territories where we have patent protection. These products may compete with our products and our patents or other intellectual property rights may not be effective or sufficient to prevent them from competing. Most A portion of our patent portfolio is at the very early stage. We will need to decide whether and in which jurisdictions to pursue protection for the various inventions in our portfolio prior to applicable deadlines. Many companies have encountered significant problems in protecting and defending intellectual property rights in foreign jurisdictions. The legal systems of certain countries, particularly certain developing countries, do not favor the 103enforcement--- enforcement of patents, trade secrets and other intellectual property protection, particularly those relating to

biopharmaceutical products, which could make it difficult for us to stop the infringement of our patents or marketing of competing products in violation of our proprietary rights generally. Proceedings to enforce our patent rights in foreign jurisdictions could result in substantial costs and divert our efforts and attention from other aspects of our business, could put our patents at risk of being invalidated or interpreted narrowly and our patent applications at risk of not issuing and could provoke third parties to assert claims against us. We may not prevail in any lawsuits that we initiate and the damages or other remedies awarded, if any, may not be commercially meaningful. Accordingly, our efforts to enforce our intellectual property rights around the world may be inadequate to obtain a significant commercial advantage from the intellectual property that we develop or license. We may be subject to claims challenging the inventorship or ownership of our patents and other intellectual property. We generally enter into confidentiality and intellectual property assignment agreements with our employees, consultants, and contractors. These agreements generally provide that inventions conceived by an employee, consultant, or contractor, as applicable, in the course of rendering services to us will be our exclusive property. However, those agreements may not be honored and may not effectively assign intellectual property rights to us. We may face claims by third parties that our agreements with employees, contractors or consultants obligating them to assign intellectual property to us are ineffective or in conflict with prior or competing contractual obligations of assignment, which could result in ownership disputes regarding intellectual property we have developed or will develop and interfere with our ability to capture the commercial value of such intellectual property. Moreover, there may be some circumstances, where we are unable to negotiate for such ownership rights. Disputes regarding ownership or inventorship of intellectual property can also arise in other contexts, such as collaborations and sponsored research. We may be subject to claims that former collaborators or other third parties have an ownership interest in our patents or other intellectual property, including our in-licensed patent rights. If we are subject to a dispute challenging our rights in or to patents or other intellectual property, such a dispute could be expensive and time-consuming. If we are unsuccessful, we could lose valuable rights in intellectual property that we regard as our own. We 103We may be subject to claims that our employees, consultants or contractors have wrongfully used or disclosed confidential information of third parties. We have received confidential and proprietary information from third parties. In addition, we employ individuals who were previously employed at other biotechnology or pharmaceutical companies. We may be subject to claims that we or our employees, consultants or contractors have inadvertently or otherwise used or disclosed confidential information of these third parties or our employees' former employers or our consultants' or contractors' current or former clients or customers. Litigation may be necessary to defend against these claims. Even if we are successful in defending against these claims, litigation could result in substantial cost and be a distraction to our management and employees from their normal responsibilities. If we are not successful, in addition to paying monetary damages, we could lose access or exclusive access to valuable intellectual property and personnel. Numerous factors may limit any potential competitive advantage provided by our intellectual property rights. The degree of future protection afforded by our intellectual property rights, whether owned or in-licensed, is uncertain because intellectual property rights have limitations, and may not adequately protect our business, provide a barrier to entry against our competitors or potential competitors, or permit us to maintain our competitive advantage. Moreover, if a third party has intellectual property rights that cover the practice of our technologies, we may not be able to fully exercise or extract value from our intellectual property rights. The following examples are illustrative: • pending patent applications that we own or license may not lead to issued patents; • patents, should they issue, that we own or license, may not provide us with any competitive advantages, or may be challenged and held invalid or unenforceable; • others may be able to develop and / or practice technology that is similar to our technology or aspects of our technology but that is not covered by our owned or in-licensed patents, should any such patents issue; 104. third parties may compete with us in jurisdictions where we do not pursue and obtain patent protection; • we, or our licensors, might not have been the first to make the inventions covered by a pending patent application that we own or license; • we, or our licensors, might not have been the first to file patent applications covering a particular invention; • others may independently develop similar or alternative technologies without infringing our intellectual property rights; • we may not be able to obtain and / or maintain necessary licenses on reasonable terms or at all; • third parties may assert an ownership interest in our intellectual property, including our in-licensed patent rights, and, if successful, such disputes may preclude us from exercising exclusive rights, or any rights at all, over that intellectual property; • we may not be able to maintain the confidentiality of our trade secrets or other proprietary information; • we may not develop or in-license additional proprietary technologies that are patentable; and • the patents of others may have an adverse effect on our business. Should any of these events occur, they could significantly harm our business and results of operation. Risks **104Risks** Related to Employee Matters, Managing Our Growth and Other RisksThe contractual obligations of Daniel Pinschewer to the University of Basel may present conflicts of interest. Daniel Pinschewer, M. D., Founder and Chief Scientific Officer until March 2020, who serves as our Scientific Advisor to the Chief Executive Officer, provided provides research services to us pursuant to a consulting agreement and will continue to do so upon execution of a new consultancy agreement. Dr. Pinschewer is also an employee of the University of Basel where he engages in, among other activities, academic research related to arenaviruses and our technology platform. Pursuant to a separate research service agreement with the University of Basel, the university provides us with on-going services with respect to our technologies, and employs the services of Dr. Pinschewer to perform some of these services. As an employee of the University of Basel, Dr. Pinschewer is subject to the university's rules of conduct, such as confidentiality, academic objectivity and transparency of research with respect to his academic research. As a result of Dr. Pinschewer's obligations to the University of Basel and his current role as our Scientific Advisor to the Chief Executive Officer, circumstances may arise that could create or appear to create conflicts of interest when, we, the University of Basel or Dr. Pinschewer are faced with decisions that could have different implications for the University of Basel and our company. Additionally, we would not automatically obtain rights to inventions that are developed by Dr. Pinschewer unless the inventions were made in the course of his consulting services to us. Furthermore, other research being conducted by the University of Basel may receive higher priority than research and services related to our technology platform.

```
Any potential disagreement or dispute that may arise with the University of Basel relating to the ownership of Dr. Pinschewer's
inventions, conflicts of interest or otherwise may result in a delay or termination of the research, development or
commercialization of our product candidates or may have other negative consequences for our company. We are highly
dependent on our key personnel, and if we are not successful in attracting and retaining highly qualified personnel, we may not
be able to successfully implement our business strategy. We are highly dependent on members of our executive team, including
. The loss of the services of any of them may adversely impact the achievement of our objectives Chief Executive Officer,
Joern Aldag. Although we have formal employment agreements with our executive officers, any of our executive officers
could leave our employment at any time, or within a contractual 105termination --- termination period that is too short to find
an adequate replacement. We currently do not have "key person" insurance on any of our employees. The loss of the services
of one or our more of executive officers our or current other key employees might impede may adversely impact the
achievement of our research, development and commercialization objectives and seriously harm our ability to successfully
implement our business strategy. Recruiting and retaining qualified employees, consultants and advisors for our business,
including scientific and technical personnel, also will be critical to our success. We primarily conduct our operations at our
facility in Vienna, Austria. This region is headquarters to many other biopharmaceutical companies and many academic and
research institutions. Competition for skilled personnel is intense and the turnover rate can be high. We may not be able to
attract and retain personnel on acceptable terms given the competition among numerous biotechnology and pharmaceutical
companies and academic institutions for skilled individuals. In addition, failure to succeed in preclinical studies, clinical trials or
applications for marketing approval may make it more challenging to recruit and retain qualified personnel. To induce valuable
employees to join and remain at our company, in addition to salary and cash incentives, we have provided, and intend to
continue to provide, stock options that vest over time. The value of these equity grants that vest over time to our employees may
be significantly affected by movements in the fair market value of our capital stock that are beyond our control, and may at any
time be insufficient to counteract more lucrative offers from other companies. Moreover, many of our employees have become
or will soon become vested in a substantial amount of our common stock or a number of common stock options. Our employees
may be more likely to leave us if the shares they own have significantly appreciated in value relative to the original purchase
prices of the shares, or if the exercise prices of the options that they hold are significantly below the market price of our
common stock. Accordingly, our future success depends on our ability to continue to attract and retain current and additional
executive officers and other key employees. The inability to recruit, or the loss of services of certain executives, key employees
105employees, consultants or advisors, may impede the progress of our research, development and commercialization
objectives and have a material adverse effect on our business, financial condition, results of operations and prospects. Our
strategic refocus and the associated workforce reduction announced in January 2024 may not result in anticipated cost
savings, could result in total costs and expenses that are greater than expected and could disrupt our business. In
January 2024, we announced a reduction in workforce by approximately 30 % in connection with the strategic refocus
of our business to prioritize and focus on our lead assets. We may not realize, in full or in part, the anticipated benefits,
savings and improvements in our operating structure from our restructuring efforts due to unforeseen difficulties,
delays or unexpected costs. If we are unable to realize the expected operational efficiencies and cost savings from the
restructuring, our results of operation and financial condition would be adversely affected. We expect to incur additional
costs as we recognize one- time employee termination- related charges. We also cannot guarantee that we will not have to
undertake additional workforce reductions or restructuring activities in the future. Furthermore, our strategic
Restructuring Plan may be disruptive to our operations. For example, our workforce reductions could yield
unanticipated consequences, such as attrition beyond planned staff reductions, increased difficulties in our day- to- day
operations and reduced employee morale. If employees who were not affected by the reduction in force seek alternate
employment, this could result in us seeking contract support which may result in unplanned additional expense or harm
our productivity. Our workforce reductions could also harm our ability to attract and retain qualified management,
scientific, and clinical personnel who are critical to our business. Any failure to attract or retain qualified personnel
could prevent us from successfully developing our product candidates in the future. We may need to grow or contract
our organization, and we may experience difficulties in managing this growth or contraction, which could disrupt our
operations. In addition to the risks associated with a reduction in force, as our finances, development and
commercialization plans and strategies evolve, we may choose to expand or contract our employee base for managerial,
operational, manufacturing, financial and other resources. Future growth or additional contraction would impose
significant added responsibilities on members of management, including the need to identify, recruit, maintain, motivate
and integrate additional employees. Also, our management may need to divert a disproportionate amount of their
attention away from our day- to- day activities and devote a substantial amount of time to managing either growth or
contraction activities. We may not be able to effectively manage our operations which may result in weaknesses in our
infrastructure, give rise to operational errors, loss of business opportunities, loss of employees and reduced productivity
among remaining employees. Growth could require significant capital expenditures and may divert financial resources
from other projects, such as the development of existing and additional product candidates. If our management is unable
to effectively manage such growth, our expenses may increase more than expected, our ability to generate and / or grow
revenue could be reduced and we may not be able to implement our business strategy. Our future financial performance
and our ability to commercialize our product candidates and compete effectively with others in our industry will depend,
in part, on our ability to effectively manage any such growth. We will need to grow the size of our organization, and we may
experience difficulties in managing this growth. As Although we recently implemented an approximately 30 % reduction in
our workforce and discontinued our GMP manufacturing facility project as part of our recent strategic refocus, as our
research, development and commercialization plans and strategies develop, and as we transition into operating as a public
```

```
company, we expect to need additional managerial, operational, sales, marketing, financial and other personnel, as well as
additional facilities to expand our operations. Future growth would impose significant added responsibilities on members of
management, including: • identifying, recruiting, integrating, maintaining and motivating additional employees; 106 •
managing our internal development efforts effectively, including the clinical and FDA review process for our product
candidates, while complying with our contractual obligations to contractors and other third parties; and ● improving our
operational, financial and management controls, reporting systems and procedures. Our future financial performance and our
ability to commercialize our product candidates will depend, in part, on our ability to effectively manage any future growth, and
our management may also have to divert a disproportionate amount of its attention away from day- to- day activities in order to
devote a substantial amount of time to managing these growth activities. Due to our limited financial resources and the limited
experience of some members of our management team in managing a public company, we may not be able to effectively
manage the expansion of our operations or recruit and train additional qualified personnel. The physical expansion of our
operations may also lead to significant costs. If we are not able to effectively expand our organization by hiring new employees
and expanding our groups of consultants and contractors, or we are not able to effectively build out new facilities to
accommodate this expansion, we may not be able to successfully implement the tasks necessary to further develop and
commercialize our product candidates and, accordingly, may not achieve our research, development and commercialization
goals. 106We We currently rely, and for the foreseeable future will continue to rely, in substantial part on certain independent
organizations, advisors and consultants to provide certain services, including substantially all aspects of regulatory approval,
clinical trial management and manufacturing. Our independent organizations, advisors and consultants may be employed by
employers other than us and may have commitments under consulting or advisory contracts with other entities. There can be no
assurance that the services of independent organizations, advisors and consultants will continue to be available to us on a timely
basis when needed, or that we can find qualified replacements. In addition, if we are unable to effectively manage our
outsourced activities or if the quality or accuracy of the services provided by consultants is compromised for any reason, our
clinical trials may be extended, delayed or terminated, and we may not be able to obtain regulatory approval of our product
candidates or otherwise advance our business. There can be no assurance that we will be able to manage our existing consultants
or find other competent outside contractors and consultants on economically reasonable terms, or at all. Risks Related to
Ownership of Our Common StockAn active trading market for our common stock may not be sustainable, and you may not be
able to resell your shares of our common stock at or above the purchase price. An active trading market for our shares may not
be sustained. You may not be able to sell your shares quickly or at the market price if trading in shares of our common stock is
not active. As a result of these and other factors, it may be difficult for our stockholders to resell their shares of our common
stock at or above the prices at which they acquired their shares or sell their shares at the time they would like to sell. Further, an
inactive market may also impair our ability to raise capital by selling shares of our common stock and may impair our ability to
enter into strategic partnerships or acquire companies or products by using our shares of common stock as consideration. Our
failure to meet the continued listing requirements of The Nasdaq Capital Global Select Market could result in a delisting of our
common stock. If we fail to satisfy the continued listing requirements of The Nasdaq Capital Global Select-Market, such as the
minimum closing bid price requirement, The Nasdaq Stock Market, LLC (Nasdaq) may take steps to delist our common stock.
Under Nasdag rules, the closing bid price for our common stock must remain at or above $ 1.00 per share to comply with
Nasdaq's minimum bid requirement for continued listing. On January 17 August 3, 2023, we received a letter from the Listing
Qualifications Department of Nasdaq notifying us that, for the last 30 consecutive business days, the closing bid price for our
common stock has been below the minimum $ 1,00 per share required for continued listing on The Nasdaq Global Select
Market pursuant to Nasdaq Listing Rule 5450 (a) (1) (the Minimum Bid Price Requirement). Under Nasdaq Listing Rule 5810
(c) (3) (A), we have been granted a 180 calendar day grace period, or until July 17 January 30, 2023 2024, to regain
compliance with the Minimum Bid Price Requirement 107Requirement. The Minimum Bid Price Requirement will be met if
our common stock has a minimum closing bid price of at least $ 1.00 per share for a minimum of ten consecutive business days
during the 180 calendar day grace period. If However, we fail failed to regain compliance prior to January 30 with the
Minimum Bid Price Requirement before July 17, 2023 2024. Accordingly, on January 18, 2024, we applied for and on
January 31, 2024 were granted by then— the we may be eligible Listing Qualifications Department of Nasdaq the right to
list our common stock on the Capital Market and to have an additional 180 calendar days, or until <del>January 15</del>-June 29,
2024, to regain compliance with the Minimum Bid Price Requirement. We are monitoring the closing bid price of our common
stock; however, there can be no assurance that we will be able to regain compliance with the Minimum Bid Price
Requirement or that Nasdaq will grant us a further extension of time to regain compliance, if necessary. The delisting of our
common stock from Nasdaq may make it more difficult for us to raise capital on favorable terms in the future. Such a delisting
would likely have a negative effect on the price of our common stock and would impair your ability to sell or purchase our
common stock when you wish to do so. Further, if we were to be delisted from Nasdaq, our common stock would cease to be
recognized as covered securities and we would be subject to regulation in each state in which we offer our securities. Moreover,
there is no assurance that any actions that we take to restore our compliance with the Minimum Bid Price Requirement would
stabilize the market price or improve the liquidity of our common stock, prevent our common stock from falling below the
minimum bid price required for continued listing again or prevent future non-compliance with Nasdaq's listing requirements.
107The The price of our stock may be volatile. The trading price of our common stock could be subject to wide fluctuations in
response to various factors, some of which are beyond our control, including limited trading volume. The market price for our
common stock may be influenced by many factors, including: • the commencement, enrollment or results of the clinical trials
of our product candidates or any future clinical trials we may conduct, or changes in the development status of our product
candidates; • any delay in our regulatory filings for our product candidates and any adverse development or perceived adverse
development with respect to the applicable regulatory authority's review of such filings, including without limitation the FDA'
```

```
s issuance of a "refusal to file" letter or a request for additional information; • adverse results or delays in clinical trials; • our
decision to initiate a clinical trial, not to initiate a clinical trial or to terminate an existing clinical trial; • adverse regulatory
decisions, including failure to receive regulatory approval of our product candidates; • changes in laws or regulations applicable
to our products, including but not limited to clinical trial requirements for approvals; • adverse developments concerning our
manufacturers; • our inability to obtain adequate product supply for any approved product or inability to do so at acceptable
prices; • our inability to establish collaborations if needed; • our failure to commercialize our product candidates; • additions
or departures of key scientific or management personnel; • unanticipated serious safety concerns related to the use of our
product candidates; 108 • introduction of new products or services offered by us or our competitors; • announcements of
significant acquisitions, strategic partnerships, joint ventures or capital commitments by us or our competitors; • our ability to
effectively manage our growth or concentration; • the size and growth of our initial cancer target markets; • our ability to
successfully treat additional types of cancers or at different stages; • actual or anticipated variations in quarterly operating
results; • our cash position; • our failure to meet the estimates and projections of the investment community or that we may
otherwise provide to the public; 108 • publication of research reports about us or our industry, or immunotherapy in particular,
or positive or negative recommendations or withdrawal of research coverage by securities analysts; • changes in the market
valuations of similar companies; • overall performance of the equity markets; • sales of our common stock by us or our
stockholders in the future; ● trading volume of our common stock; ● changes in accounting practices; ● ineffectiveness of our
internal controls; • disputes or other developments relating to proprietary rights, including patents, litigation matters and our
ability to obtain patent protection for our technologies; • significant lawsuits, including patent or stockholder litigation; •
general political and economic conditions; and • other events or factors, many of which are beyond our control. In addition, the
stock market in general, and The Nasdaq Global Scleet Market and biopharmaceutical companies in particular, have experienced
extreme price and volume fluctuations that have often been unrelated or disproportionate to the operating performance of these
companies. Broad market and industry factors may negatively affect the market price of our common stock, regardless of our
actual operating performance. In the past, securities class action litigation has often been instituted against companies following
periods of volatility in the market price of a company's securities. This type of litigation, if instituted, could result in substantial
costs and a diversion of management's attention and resources, which would harm our business, operating results or financial
condition. 109Our If securities analysts publish negative evaluations of our stock, the price of our stock could decline. The
trading market for our common stock depends in part on the research and reports that securities analysts publish about us or our
business. If one or more of the analysts who covers us downgrades our stock or publishes inaccurate or unfavorable research
about our business, our stock price may decline. If one or more of these analysts ceases coverage of our company or fails to
publish reports on us regularly, demand for our stock could decrease, which might cause our stock price and trading volume to
decline. Our principal stockholders and management own a significant percentage of our stock and exert significant influence
over matters subject to stockholder approval. Our Class A common stock has no voting rights. As a result, all matters submitted
to our stockholders are decided by the vote of holders of our common stock. Our executive officers, directors, and 5 %
stockholders beneficially own approximately 58 40 % of our outstanding voting stock. These stockholders may be able to
determine many matters requiring stockholder approval. For example, these stockholders may be able to control elections of
directors, amendments of our organizational documents, or approval of any merger, sale of assets, or other major corporate
transaction. This may prevent or discourage unsolicited acquisition proposals or offers for our common stock . 109Sales of a
substantial number of shares of our common stock in the public market could cause our stock price to fall. Sale of a substantial
number of shares of our common stock in the public market or the perception that these sales might occur could significantly
reduce the market price of our common stock, and impair our ability to raise adequate capital through the sale of additional
equity securities. Our operating results may fluctuate significantly, which makes our future operating results difficult to predict
and could cause our operating results to fall below expectations or our guidance. Our quarterly and annual operating results may
fluctuate significantly in the future, which makes it difficult for us to predict our future operating results. From time to time, we
may enter into license or collaboration agreements with other companies that include development funding and significant
upfront and milestone payments and / or royalties, which may become an important source of our revenue. Accordingly, our
revenue may depend on development funding and the achievement of development and clinical milestones under current and
any potential future license and collaboration agreements and, if approved, sales of our product candidates. These upfront and
milestone payments may vary significantly from period to period and any variance could cause a significant fluctuation in our
operating results from one period to the next. Further, our operating results may fluctuate due to a variety of other factors, many
of which are outside of our control and may be difficult to predict, including the following: • the timing and cost of, and level of
investment in, research and development activities relating to our current and any future product candidates, which will change
from time to time; • the timing and outcomes of clinical trials for our current and any other future product candidates; • the cost
of manufacturing our current and any future product candidates, which may vary depending on FDA guidelines and
requirements, the quantity of production and the terms of our agreements with manufacturers; • our ability to adequately support
our future growth; • potential unforeseen business disruptions that increase our costs or expenses; • future accounting
pronouncements or changes in our accounting policies; and • the changing and volatile global economic environment. The
cumulative effect of these factors could result in large fluctuations and unpredictability in our quarterly and annual operating
results. As a result, comparing our operating results on a period-to-period basis may not be meaningful. Investors should not
rely on our past results as an indication of our future performance. This variability and unpredictability could also result in our
failing to meet the expectations of industry or financial analysts or investors for any period. If our revenue or operating results
fall below the expectations of analysts or investors or below any forecasts we may provide to the market, or if the forecasts we
provide to the market are below the expectations of analysts or investors, the price of our common stock could decline
substantially. The price of our common stock could decline even when we have met any previously publicly stated revenue and /
```

```
or earnings guidance we may provide. We-110We expect to continue to incur significant increased costs as a result of operating
as a public company, and our management is required to devote substantial time to new compliance initiatives. As a public
company, and particularly after we are no longer an emerging growth company, as defined in the JOBS Act, we will incur
significant legal, accounting and other expenses that we did not incur as a private company. Our status as an "emerging
<mark>growth company" will end on December 31, 2024, at the latest.</mark> The Sarbanes- Oxley Act, the Dodd- Frank Wall Street
Reform and Consumer Protection Act, the listing requirements of The 110Nasdaq--- Nasdaq Global Select Market and other
applicable securities rules and regulations impose various requirements on public companies, including establishment and
maintenance of effective disclosure and financial controls and corporate governance practices. We expect that we will continue
to need to hire additional accounting, finance, and other personnel in connection with our efforts to comply with the
requirements of being, a public company and our management and other personnel will need to devote a substantial amount of
time towards maintaining compliance with these requirements. These requirements will continue to increase our legal and
financial compliance costs and will make some activities more time- consuming and costly. We are continuously evaluating
these rules and regulations which are often subject to varying interpretations, in many cases due to their lack of specificity, and,
as a result, their application in practice may evolve over time as new guidance is provided by regulatory and governing bodies.
This could result in continuing uncertainty regarding compliance matters and higher costs necessitated by ongoing revisions to
disclosure and governance practices. Pursuant to Section 404 of the Sarbanes-Oxley Act (SOX Section 404) we are required to
furnish a report by our management on our internal control over financial reporting with our Annual Report on Form 10-K with
the SEC. However, while we remain an emerging growth company, we will not be required to include an attestation report on
internal control over financial reporting issued by our independent registered public accounting firm . After no longer
qualifying as an emerging growth company, we may, under certain conditions, still qualify as a " smaller reporting
company " and benefit from similar exemptions from disclosure requirements, including not being required to comply
with the auditor attestation requirements of Section 404 of the Sarbanes- Oxley Act and reduced disclosure obligations
regarding executive compensation in our periodic reports and proxy statements. To achieve compliance with SOX Section
404 within the prescribed period, we will be engaged in a process to document and evaluate our internal control over financial
reporting, which is both costly and challenging. In this regard, we will need to continue to dedicate internal resources,
potentially engage outside consultants and adopt a detailed work plan to assess and document the adequacy of internal control
over financial reporting, continue steps to improve control processes as appropriate, validate through testing that controls are
functioning as documented and implement a continuous reporting and improvement process for internal control over financial
reporting. Despite our efforts, there is a risk that we will not be able to conclude, within the prescribed timeframe or at all, that
our internal control over financial reporting is effective as required by SOX Section 404. If we identify one or more material
weaknesses, it could result in an adverse reaction in the financial markets due to a loss of confidence in the reliability of our
financial statements. We do not intend to pay dividends on our common stock so any returns will be limited to the value of our
stock. We currently anticipate that we will retain future earnings for the development, operation and expansion of our business
and do not anticipate declaring or paying any cash dividends for the foreseeable future. Any return to stockholders will therefore
be limited to the appreciation of their stock, which may never occur. Anti-takeover provisions under our charter documents and
Delaware law could delay or prevent a change of control which could limit the market price of our common stock and may
prevent or frustrate attempts by our stockholders to replace or remove our current management. Our amended and restated
certificate of incorporation and amended and restated bylaws contain provisions that could delay or prevent a change of control
of our company or changes in our board of directors that our stockholders might consider favorable. Some of these provisions
include: • a board of directors divided into three classes serving staggered three- year terms, such that not all members of the
board will be elected at one time; 111 • a prohibition on stockholder action through written consent, which requires that all
stockholder actions be taken at a meeting of our stockholders; • a requirement that special meetings of stockholders be called
only by our board of directors acting pursuant to a resolution approved by the affirmative vote of a majority of the directors then
in office; • advance notice requirements for stockholder proposals and nominations for election to our board of directors; +11-•
a requirement that no member of our board of directors may be removed from office by our stockholders except for cause and, in
addition to any other vote required by law, upon the approval of not less than two-thirds of all outstanding shares of our voting
stock then entitled to vote in the election of directors; • a requirement of approval of (i) not less than two-thirds of all
outstanding shares of our voting stock to amend any bylaws by stockholder action and (ii) the majority of the outstanding shares
of our voting stock to amend specific provisions of our certificate of incorporation; and • the authority of the board of directors
to issue preferred stock on terms determined by the board of directors without stockholder approval and which preferred stock
may include rights superior to the rights of the holders of common stock. In addition, because we are incorporated in Delaware,
we are governed by the provisions of Section 203 of the Delaware General Corporate Law, which may prohibit certain business
combinations with stockholders owning 15 % or more of our outstanding voting stock. These anti- takeover provisions and other
provisions in our amended and restated certificate of incorporation and amended and restated bylaws could make it more
difficult for stockholders or potential acquirors to obtain control of our board of directors or initiate actions that are opposed by
the then- current board of directors and could also delay or impede a merger, tender offer or proxy contest involving our
company. These provisions could also discourage proxy contests and make it more difficult for you and other stockholders to
elect directors of your choosing or cause us to take other corporate actions you desire. Any delay or prevention of a change of
control transaction or changes in our board of directors could cause the market price of our common stock to decline. Our
amended and restated bylaws will-designate the Court of Chancery of the State of Delaware as the exclusive forum for
substantially all disputes between us and our stockholders , which could limit our stockholders' ability to obtain a favorable
judicial forum for disputes with us. Our amended and restated bylaws provide that, unless we consent in writing to an alternative
forum, the Court of Chancery of the State of Delaware will be the sole and exclusive forum for state law claims for (i) any
```

```
derivative action or proceeding brought on our behalf, (ii) any action asserting a claim of breach of a fiduciary duty owed by any
of our current or former directors, officers and employees to us or our stockholders, (iii) any action asserting a claim against us
or any of our current or former directors, officers, or other employees or stockholders arising pursuant to any provision of the
Delaware General Corporation Law, our certificate of incorporation or our bylaws, (iv) any action to interpret, apply, enforce or
determine the validity of our certificate of incorporation or our bylaws, or (v) any action asserting a claim against us or any of
our current or former directors or officers or other employees that is governed by the internal affairs doctrine, in each case
subject to the Court of Chancery having personal jurisdiction over the indispensable parties named as defendants therein. This
choice of forum provision may limit a stockholder's ability to bring a claim in a judicial forum that it finds favorable for
disputes with us or our directors, officers or employees, which may discourage such lawsuits against us and our directors,
officers and employees even though an action, if successful, might benefit our stockholders. Stockholders who do bring a claim
in the Court of Chancery could face additional litigation costs in pursuing any such claim, particularly if they do not reside in or
near the jurisdiction. The Court of Chancery may also reach different judgments or results than would other courts, including
courts where a stockholder considering an action may be located or would otherwise choose to bring the action, and such
judgments or results may be more favorable to us than to our stockholders. Alternatively, if a court were to find this provision of
our amended and restated certificate of incorporation or amended and restated bylaws inapplicable to, or unenforceable in
respect of, one or 112or more of the specified types of actions or proceedings, we may incur additional costs, which could have
a material adverse effect on our business, financial condition or results of operation. Our disclosure controls and procedures may
not prevent or detect all errors or acts of fraud. Upon the closing of our initial public offering in April 2019, we became subject
to the periodic reporting requirements of the Exchange Act. We are continuing to refine our disclosure controls and procedures
to provide reasonable assurance that information we must disclose in reports we file or submit under the Exchange Act is
accumulated and communicated to management, and recorded, processed, summarized and reported within the time periods
specified in the rules and forms of the SEC. We believe that any disclosure controls and procedures, no matter 112how-how
well- conceived and operated, can provide only reasonable, not absolute, assurance that the objectives of the control system are
met. These inherent limitations include the realities that judgments in decision- making can be faulty, and that breakdowns can
occur because of simple error or mistake. Additionally, controls can be circumvented by the individual acts of some persons, by
collusion of two or more people or by an unauthorized override of the controls. Accordingly, because of the inherent limitations
in our control system, misstatements due to error or fraud may occur and not be detected. If we fail to maintain proper and
effective internal control over financial reporting, our ability to produce accurate and timely financial statements could be
impaired, investors may lose confidence in our financial reporting and the trading price of our common stock may decline.
Pursuant to Section 404 of Sarbanes-Oxley, our management is required to report upon the effectiveness of our internal control
over financial reporting. When we lose our status as an "emerging growth company;" and if we do not qualify as a "smaller
reporting company" at such time, our independent registered public accounting firm will be required to attest to the
effectiveness of our internal control over financial reporting. The rules governing the standards that must be met for
management to assess our internal control over financial reporting are complex and require significant documentation, testing
and possible remediation. To comply with the requirements of being a reporting company under the Exchange Act, we will need
to implement additional financial and management controls, reporting systems and procedures and hire additional accounting
and finance staff. In connection with our preparation and the audits of our financial statements as of and for the years ended
December 31, 2017 and 2018, we and our independent registered public accounting firm identified material weaknesses as
defined under the Exchange Act and by the Public Company Accounting Oversight Board (United States) in our internal control
over financial reporting. We have implemented a variety of controls to remediate the material weaknesses identified which
enabled us to broaden the scope and quality of our internal review of underlying information related to financial reporting and to
enhance our internal control procedures. We believe that these efforts have remediated the material weaknesses, but we cannot
assure that there will not be material weaknesses or significant deficiencies in our internal control over financial reporting in the
future. Any failure to maintain internal control over financial reporting could severely inhibit our ability to accurately report our
financial condition, results of operations or cash flows. If we are unable to conclude that our internal control over financial
reporting is effective, or if our independent registered public accounting firm determines we have a material weakness or
significant deficiency in our internal control over financial reporting, investors may lose confidence in the accuracy and
completeness of our financial reports, the market price of our common stock could decline, and we could be subject to sanctions
or investigations by Nasdaq, the SEC or other regulatory authorities. Failure to remedy any material weakness in our internal
control over financial reporting, or to implement or maintain other effective control systems required of public companies, could
also restrict our future access to the capital markets. General RisksAdverse developments affecting the financial services
industry, such as actual events or concerns involving liquidity, defaults, or non-performance by financial institutions or
transactional counterparties, could adversely affect the Company's current and projected business operations and its financial
condition and results of operations. Actual events involving limited liquidity, defaults, non-performance or other adverse
developments that affect financial institutions, transactional counterparties or other companies in the financial services industry
or the financial services industry generally, or concerns or rumors about any events of these kinds or other similar risks, such as
the failure of Silicon Valley Bank and various regional banks in 2023, have in the past and may in the future lead to market-
wide liquidity problems. If For example, on March 10, 2023, Silicon Valley Bank (SVB) was closed by the California
Department of Financial Protection and Innovation, which appointed the Federal Deposit Insurance Corporation (FDIC) as
receiver. Similarly, on March 12, 2023, Signature Bank and Silvergate Capital Corp. were each swept into receivership.
Although a statement by the Department of the Treasury, the Federal Reserve and the FDIC indicated that all depositors of SVB
would have access to all of their money after only one business day of closure, including funds held in uninsured deposit
accounts, borrowers under credit agreements, letters of credit and certain other financial instruments with SVB, Signature Bank
```

```
or any other financial institution that is placed into 113 receivership by the FDIC may be unable to access undrawn amounts
thereunder. Although we are not a borrower or party to any such instruments with SVB, Signature or any other financial
institution currently in receivership, if any of our lenders or counterparties to any such instruments were to be placed into
receivership, we may be unable to access such funds. In addition, if any of our customers, suppliers or other parties with whom
we conduct business are unable to access funds pursuant to such instruments or lending arrangements with such a financial
113 financial institution, such parties' ability to pay their obligations to us or to enter into new commercial arrangements
requiring additional payments to us could be adversely affected. Heightened In this regard, counterparties to SVB credit
agreements and arrangements, and third parties such as beneficiaries of letters of eredit (among others), may experience direct
impacts from the closure of SVB and uncertainty remains over liquidity concerns in the broader financial services industry.
Similar impacts have occurred in the past, such as during the 2008-2010 financial crisis. We hold no deposits or securities with
SVB, Signature Bank or Silvergate Capital. Inflation inflation and rapid-increases in interest rates may increase our labor
costs, costs to conduct clinical trials and other operational costs, or adversely affect our ability to obtain additional
funding on attractive terms. Although inflation has not had a material impact on our business or operating results
historically, inflation, has had, and may continue to have led, an impact on the labor costs we incur to a decline in attract
and retain qualified personnel, costs to conduct clinical trials and the other trading value operational costs. Inflationary
<mark>costs could adversely affect our business, financial condition and results</mark> of <mark>operations. Increased <del>previously issued</del></mark>
<del>government securities with i</del>nterest rates <del>below current market interest may adversely affect our borrowing rates</del>- rate.
Although the U. S. Department of Treasury, FDIC and our ability Federal Reserve Board have announced a program to obtain,
or provide up to $ 25 billion of loans to financial institutions secured by certain of such government securities held by financial
institutions to mitigate the risk of terms under which we can obtain, any potential losses on the sale of such instruments,
widespread demands for customer withdrawals or other liquidity needs of financial institutions for immediate liquidity may
exceed the capacity of such program. Additionally -- additional, there is no guarantee that the U. S. Department of Treasury,
FDIC and Federal Reserve Board will provide access to uninsured funds in the future in the event of the closure of other banks
or financial institutions, or that they would do so in a timely fashion. Although we assess our banking and customer
relationships as we believe necessary or appropriate, our access to funding sources and other credit arrangements in amounts
adequate to finance or capitalize our current and projected future business operations could be significantly impaired by factors
that affect the Company, the financial institutions with which the Company has credit agreements or arrangements directly, or
the financial services industry or economy in general. These factors could include, among others, events such as liquidity
constraints or failures, the ability to perform obligations under various types of financial, credit or liquidity agreements or
arrangements, disruptions or instability in the financial services industry or financial markets, or concerns or negative
expectations about the prospects for companies in the financial services industry. These factors could involve financial
institutions or financial services industry companies with which the Company has financial or business relationships, but could
also include factors involving financial markets or the financial services industry generally. The results of events or concerns
that involve one or more of these factors could include a variety of material and adverse impacts on our current and projected
business operations and our financial condition and results of operations. These could include, but may not be limited to, the
following: • Delayed access to deposits or other financial assets or the uninsured loss of deposits or other financial assets; •
Delayed or lost access to, or reductions in borrowings available under revolving existing credit facilities or other working capital
sources and / or delays, inability or reductions in the company's ability to refund, roll over or extend the maturity of, or enter
into new credit facilities or other working capital resources; • Potential or actual breach of contractual obligations that require
the Company to maintain letters of credit or other credit support arrangements; • Potential or actual breach of financial
covenants in our credit agreements or credit arrangements; ● Potential or actual cross- defaults in other credit agreements, credit
arrangements or operating or financing agreements; or • Termination of eash management arrangements and / or delays in
accessing or actual loss of funds subject to cash management arrangements. 114In addition, investor concerns regarding the U.
S. or international financial systems could result in less favorable commercial financing terms, including higher interest rates or
costs and tighter financial and operating covenants, or systemic limitations on access to credit and liquidity sources, thereby
making it more difficult for us to acquire financing on acceptable terms or at all. Any decline in available funding or access to
our eash and liquidity resources could, among other risks, adversely impact our ability to meet our operating expenses, financial
obligations or fulfill our other obligations, result in breaches of our financial and / or contractual obligations or result in
violations of federal or state wage and hour laws. Any of these impacts, or any other impacts resulting from the factors described
above or other related or similar factors not described above, could have material adverse impacts on our liquidity and our
eurrent and / or projected business operations and financial condition and results of operations. In addition, any further
deterioration in the macroeconomic economy or financial services industry could lead to losses or defaults by our customers or
suppliers, which in turn, could have a material adverse effect on our current and / or projected business operations and results of
operations and financial condition. For example, a customer may fail to make payments when due, default under their
agreements with us, become insolvent or declare bankruptey, or a supplier may determine that it will no longer deal with us as a
eustomer. In addition, a eustomer or supplier could be adversely affected by any of the liquidity or other risks that are described
above as factors that could result in material adverse impacts on the Company, including but not limited to delayed access or
loss of access to uninsured deposits or loss of the ability to draw on existing credit facilities involving a troubled or failed
financial institution. Any customer or supplier bankruptcy or insolvency, or the failure of any customer to make payments when
due, or any breach or default by a customer or supplier, or the loss of any significant supplier relationships, could result in
material losses to the Company and may have a material adverse impact on our business. Our employees, independent
contractors, consultants, commercial partners and vendors may engage in misconduct or other improper activities, including
noncompliance with regulatory standards and requirements. We are exposed to the risk of employee fraud or other illegal
```

```
activity by our employees, independent contractors, consultants, commercial partners and vendors. Misconduct by these parties
could include intentional, reckless and negligent conduct that fails to: comply with the regulations of the FDA and other
comparable foreign regulatory bodies, provide true, complete and accurate information to the FDA and other comparable
foreign regulatory bodies, comply with manufacturing standards we have established, comply with healthcare fraud and abuse
laws in the United States and similar foreign fraudulent misconduct laws or report financial information or data accurately or to
disclose unauthorized activities to us. If we obtain FDA approval of any of our product candidates and begin commercializing
those products in the United States, our potential exposure under such laws and regulations will increase significantly, and our
costs associated with compliance with such laws and regulations are also likely to increase. These laws may impact, among
other things, our current activities with principal investigators and research patients, as well as proposed and future sales,
marketing and education programs. In particular, the promotion, sales and marketing of healthcare items and services, as well as
certain business arrangements in the healthcare industry, are subject to extensive laws designed to prevent fraud, kickbacks, self-
dealing and other abusive practices. These laws and regulations may restrict or prohibit a wide range of pricing, discounting,
marketing and promotion, structuring and commission (s), certain customer incentive programs and other business arrangements
generally. We have adopted a code of business conduct and ethics, but it is not always possible to identify and deter employee
and other third- party misconduct, and the precautions we take to detect and prevent inappropriate conduct may not be effective
in controlling unknown or unmanaged risks or losses or in protecting us from governmental investigations or other actions or
lawsuits stemming from a failure to be in compliance with such laws or regulations. If any such actions are instituted against us,
and we are not successful in defending ourselves or asserting our rights, those actions could have a significant impact on our
business, including the imposition of civil, criminal and administrative penalties, damages, monetary fines, imprisonment,
possible exclusion from participation in Medicare, Medicaid and other federal healthcare programs, additional reporting
requirements and oversight if we become subject to a corporate integrity agreement or similar agreement to resolve allegations
of noncompliance with these laws, contractual damages, reputational harm, diminished profits and future earnings, and
curtailment of our operations, any of which could adversely affect our ability to operate our business, financial condition and
results of operations. 115 Violations --- Violations of or liabilities under environmental, health and safety laws and regulations
could subject us to fines, penalties or other costs that could have a material adverse effect on the success of our business. We are
subject to numerous environmental, health and safety laws and regulations, including those governing laboratory procedures, the
handling, use, storage, treatment and disposal of hazardous materials and wastes and the cleanup of contaminated sites. Our
operations involve the use of potentially hazardous and flammable materials, including chemicals and biological materials. Our
operations also produce hazardous waste products. We could incur substantial costs as a result of violations of or liabilities
under environmental requirements in connection with our operations or property, including fines, penalties and other sanctions,
investigation and cleanup costs and third- party claims. Although we generally contract with third parties for the disposal of
hazardous materials and wastes from our operations, we cannot eliminate the risk of contamination or injury from these
materials. In the event of contamination or injury 114injury resulting from our use of hazardous materials, we could be held
liable for any resulting damages, and any liability could exceed our resources. Furthermore, environmental laws and regulations
are complex, change frequently and have tended to become more stringent. We cannot predict the impact of changes to
applicable laws and regulations and cannot be certain of our future compliance. In addition, we may incur substantial costs in
order to comply with current or future environmental, health and safety laws and regulations. These current or future laws and
regulations may impair our research, development or production efforts. Although we maintain workers' compensation
insurance to cover us for costs and expenses we may incur due to injuries to our employees resulting from the use of hazardous
materials, this insurance may not provide adequate coverage against potential liabilities. We do not maintain insurance for
environmental liability or toxic tort claims that may be asserted against us in connection with our storage or disposal of
biological, hazardous or radioactive materials. We are subject to stringent and evolving U. S. and foreign laws, regulations
and rules, contractual obligations, industry standards, policies and other obligations related to data privacy and
security. Our <del>internal computer systems, <mark>actual or perceived failure to comply with such obligations could lead to</del></del></mark>
regulatory investigations or actions; litigation (including class claims) and mass arbitration demands; fines and
penalties; disruptions of or our business operations; reputational harm; loss of revenue or profits; and other adverse
business consequences. In those—the ordinary course of business, we collect, receive, store, process, generate, used—use
by our, transfer, disclose, make accessible, protect, secure, dispose of, transmit, and share (collectively, process) personal
data and other sensitive information, including proprietary and confidential business data, trade secrets, intellectual
property, sensitive third- party CROs or data, business plans, transactions, clinical trial data and financial information
(collectively, sensitive data). Our data processing activities subject us to numerous data privacy and security obligations,
such as various laws, regulations, guidance, industry standards, external and internal privacy and security policies,
contractual requirements, and other contractors obligations relating to data privacy and security. In the United States,
federal, state, and local governments have enacted numerous data privacy and security laws, including data breach
notification laws, personal data privacy laws, consumer protection laws (e.g., Section 5 of the Federal Trade Commission
Act), and other similar laws (e. g., wiretapping laws). or For consultants example, the federal Health Insurance
Portability and Accountability Act of 1996 (" HIPAA "), as amended by the Health Information Technology for
Economic and Clinical Health Act ("HITECH"), imposes specific requirements relating to the privacy, security, and
transmission of individually identifiable protected health information. For more information regarding risks associated
with HIPAA, please refer to the section above that discusses risks associated with U. S. healthcare laws. In the past few
years, numerous U. S. states — including California, Virginia, Colorado, Connecticut, and Utah — have enacted
comprehensive privacy laws that impose certain obligations on covered businesses, including providing specific
disclosures in privacy notices and affording residents with certain rights concerning their personal data. As applicable,
```

such rights may include the right to access, correct, or delete certain personal data, and to opt- out of certain data processing activities, such as targeted advertising, profiling, and automated decision- making. The exercise of these rights may impact our business and ability to provide our products and services. Certain states also impose stricter requirements for processing certain personal data, including sensitive information, such as conducting data privacy impact assessments. These state laws allow for statutory fines for noncompliance. For example, the California Consumer Privacy Act of 2018, as amended by the California Privacy Rights Act of 2020 ("CPRA") (collectively, "CCPA"), applies to personal data of consumers, business representatives, and employees who are California residents, and requires businesses to provide specific disclosures in privacy notices and honor requests of such individuals to exercise certain privacy rights. The CCPA provides for fines of up to \$7,500 per intentional violation and allows private litigants affected by certain data breaches to recover significant statutory damages. Although there are limited exemptions for clinical trial data under the CCPA, the CCPA and other similar laws may impact (possibly significantly) our business activities depending on how it is interpreted, should we become subject to the CCPA in the future. Similar laws are being considered in several other states, as well as at the federal and local levels, and we expect more states to pass similar laws in the future. These developments may further complicate compliance efforts and increase legal risk and compliance costs for us and the third parties upon whom we rely. 115Outside the United States, an increasing number of laws, regulations, and industry standards may govern data privacy and security. For example, EU GDPR and the UK GDPR impose strict requirements for processing personal data. For example, under the GDPR, companies may face temporary or definitive bans on data processing and other corrective actions; fines of up to 20 million Euros under the EU GDPR, 17. 5 million pounds sterling under the UK GDPR or, in each case, 4 % of annual global revenue, whichever is greater; or private litigation related to processing of personal data brought by classes of data subjects or consumer protection organizations authorized at law to represent their interests. We may be subject to new laws governing the privacy of consumer health data, including reproductive, sexual orientation, and gender identity privacy rights. For example, Washington's My Health My Data Act ("MHMD") broadly defines consumer health data, places restrictions on processing consumer health data (including imposing stringent requirements for consents), provides consumers certain rights with respect to their health data, and creates a private right of action to allow individuals to sue for violations of the law. Other states are considering and may adopt similar laws. Our employees and personnel use generative artificial intelligence ("AI") technologies to perform their work, and the disclosure and use of personal data in generative AI technologies is subject to various privacy laws and other privacy obligations. Governments have passed and are likely to pass additional laws regulating generative AI. Our use of this technology could result in additional compliance costs, regulatory investigations and actions, and lawsuits. If we are unable to use generative AI, it could make our business less efficient and result in competitive disadvantages. In addition, we may be unable to transfer personal data from Europe and other jurisdictions to the United States or other countries due to data localization requirements or limitations on cross- border data flows. Europe and other jurisdictions have enacted laws requiring data to be localized or limiting the transfer of personal data to other countries. In particular, the European Economic Area (EEA) and the United Kingdom (UK) have significantly restricted the transfer of personal data to the United States and other countries whose privacy laws it generally believes are inadequate. Other jurisdictions may adopt similarly stringent interpretations of their data localization and cross- border data transfer laws. Although there are currently various mechanisms that may be used to transfer personal data from the EEA and UK to the United States in compliance with law, such as the EEA's standard contractual clauses, the UK's International Data Transfer Agreement / Addendum, and the EU- U. S. Data Privacy Framework and the UK extension thereto (which allows for transfers to relevant U. S.- based organizations who selfcertify compliance and participate in the Framework), these mechanisms are subject to legal challenges, and there is no assurance that we can satisfy or rely on these measures to lawfully transfer personal data to the United States. If there is no lawful manner for us to transfer personal data from the EEA, the UK, or other jurisdictions to the United States, or if the requirements for a legally- compliant transfer are too onerous, we could face significant adverse consequences, including the interruption or degradation of our operations, the need to relocate part of or all of our business or data processing activities to other jurisdictions (such as Europe) at significant expense, increased exposure to regulatory actions, substantial fines and penalties, the inability to transfer data and work with partners, vendors and other third parties, and injunctions against our processing or transferring of personal data necessary to operate our business. Additionally, companies that transfer personal data out of the EEA and UK to other jurisdictions, particularly to the United States, are subject to increased scrutiny from regulators, individual litigants, and activities groups. Some EU regulators have ordered certain companies to suspend or permanently cease certain transfers of personal data out of Europe for allegedly violating the EU GDPR's cross-border data transfer limitations. In addition to data privacy and security laws, we are bound by other contractual obligations related to data privacy and security, and our efforts to comply with such obligations may not be successful. We also publish privacy policies, marketing materials, and other statements regarding data privacy and security and if these policies, materials, or statements are found to be deficient, lacking in transparency, deceptive, unfair, or misrepresentative of our practices, we may be subject to investigation, enforcement actions by regulators, or other adverse consequences. Obligations related to data privacy and security (and consumers' data privacy expectations) are quickly changing, becoming increasingly stringent, and creating uncertainty. Additionally, these obligations may be subject to differing applications and interpretations, which may be inconsistent or conflict among jurisdictions. Preparing for and complying with these obligations requires us to devote significant resources and may necessitate changes to our services, information technologies, systems, and practices and to those of any third parties that process personal data on our behalf. 116We may at times fail (or be perceived to have failed) in ot <mark>our suffer efforts to comply with our data privacy and</mark> security breaches obligations. Moreover, despite our efforts, our

```
personnel or third parties on whom we rely may fail to comply with such obligations, which could negatively impact our
business operations. If we result in a material disruption of the development programs of our- or product candidates. We and
these--- the third parties on which we rely extensively fail, or are perceived to have failed, to address or comply with
applicable data privacy and security obligations, we could face significant consequences, including but not limited to:
government enforcement actions (e.g., investigations, fines, penalties, audits, inspections, and similar); litigation
(including class- action claims) and mass arbitration demands; additional reporting requirements and / or oversight;
bans on processing personal data (including clinical trial data); and orders to destroy or not use personal data. In
particular, plaintiffs have become increasingly more active in bringing privacy-related claims against companies.
including class claims and mass arbitration demands. Some of these claims allow for the recovery of statutory damages
on a per violation basis, and, if viable, carry the potential for monumental statutory damages, depending on the volume
of data and the number of violations. Any of these events could have a material adverse effect on our reputation.
business, or financial condition, including but not limited to: loss of customers; inability to process personal data or to
operate in certain jurisdictions; limited ability to develop or commercialize our products; expenditure of time and
resources to defend any claim or inquiry; adverse publicity; or substantial changes to our business model or
operationsCybersecurity risks and the failure to maintain the security, confidentiality, integrity, and availability of our
information technology systems to conduct or data, and manage those maintained on our behalf, could result in adverse
consequences that materially affect our business. Despite the implementation of security measures, including without
<mark>limitation regulatory investigations our- or internal computer systems and actions, a material disruption of those-- the</mark>
<mark>development programs</mark> of our <mark>product candidates, </mark><del>current and future CROs and other contractors and consultants are</del>
vulnerable to damage to from computer viruses and unauthorized access. The risk of a security breach or our reputation
disruption, particularly through cyber attacks or cyber intrusion, including by computer hackers, foreign governments, and cyber
terrorists-/ or subject us to costs, loss has generally increased as the number, intensity and sophistication of attempted attacks
customers or sales, fines and penalties or lawsuits intrusions from around the world have increased. In the ordinary course of
our business, we collect and store sensitive data, including and, among as a result, we and other --- the third parties upon
which we rely face a variety of evolving threats that could cause security incidents things, legally protected patient health
information, personally identifiable information about our employees, intellectual property and proprietary business information
. We manage and maintain our applications and data utilizing on-site systems and outsourced vendors. These applications and
data encompass a wide variety of business critical information, including research and development information, commercial
information and business and financial information. Because information systems, networks and other technologies are critical
to many of our operating activities, shutdowns or service disruptions at our company or vendors that provide information
systems, networks or other services to us pose increasing risks, Cyber- attacks, malicious internet- based activity, online and
offline fraud, and other similar activities threaten the confidentiality, integrity, and availability of our sensitive data and
information technology systems, and those of the third parties upon which we rely. Such disruptions may be caused by
events-threats are prevalent and continue to rise, are increasingly difficult to detect, and come from a variety of sources,
including traditional computer "hackers," threat actors, "hacktivists," organized criminal threat actors, personnel (
such as through theft or misuse), sophisticated nation states, and nation- state- supported actors. Some actors now engage
and are expected to continue to engage in cyber- attacks, including without limitation nation- state actors for geopolitical
reasons and in conjunction with military conflicts and defense activities. During times of war and other major conflicts,
we and the third parties upon which we rely may be vulnerable to a heightened risk of these attacks, including
retaliatory cyber- attacks, that could materially disrupt our systems and operations, supply chain, and ability to
produce, sell and distribute our services. We and the third parties upon which we rely are subject to a variety of evolving
threats, including but not limited to computer hacking, phishing attacks and social engineering (including through deep
fakes, which may be increasingly more difficult to identify as fake), supply- chain attacks, software bugs, server
malfunctions, software or hardware failures, loss of data or other information technology assets, adware, attacks
enhanced or facilitated by AI, ransomware, dissemination of malware, computer viruses, worms and other destructive or
disruptive software, denial of service attacks and other malicious activity, credential stuffing, credential harvesting,
personnel misconduct or error as well as power outages, telecommunications failures, natural disasters (including extreme
weather), terrorist attacks or other similar events . In particular, severe ransomware attacks are becoming increasingly
prevalent and can lead to significant interruptions in our operations, ability to provide our products or services, loss of
sensitive data and income, reputational harm, and diversion of funds. Extortion payments may alleviate the negative
impact of a ransomware attack, but we may be unwilling or unable to make such payments due to, for example,
applicable laws or regulations prohibiting such payments. Such events could have an adverse impact on us and our business,
including loss of data and damage to equipment and data. In addition, system redundancy may be ineffective or inadequate, and
our disaster recovery planning may not be sufficient to cover all eventualities. If such events were to occur and cause
interruptions in our 117our operations, it could result in a material disruption of our development programs and our business
operations, such as the loss of clinical trial data from completed or future clinical trials. Such loss could result in delays in our
regulatory approval efforts and significantly increase our costs to recover or reproduce the data. In addition, we may not have
adequate insurance coverage to compensate for any losses associated with such events. For example, the loss of clinical trial
data for our product candidates could result in delays in our regulatory approval efforts and significantly increase our costs to
recover or reproduce the lost data. 116Likewise Remote work has become more common and has increased risks to our
information technology systems and data, we as more of our employees utilize network connections, computers, and
devices outside our premises or network, including working at home, while in transit and in public locations.
Additionally, future or past business transactions (such as acquisitions or integrations) could expose us to additional
```

```
cybersecurity risks and vulnerabilities, as our systems could be negatively affected by vulnerabilities present in acquired
or integrated entities' systems and technologies. We may discover security issues that were not found during due
diligence of such acquired or integrated entities, and it may be difficult to integrate companies into our information
technology environment and security program. We rely on third parties for - party service providers and technologies to
operate critical business systems to process sensitive information in a variety of contexts, including, without limitation
the manufacture of our product candidates and to conduct clinical trials. Our ability, and similar events relating to monitor
these their third computer systems parties' information security practices is limited, and these third parties may not
have adequate information security measures in place. If our third- party service providers experience a security
incident or other interruption, we could experience also have a material adverse consequences, including effect on our
business. Any breach in our information technology systems could lead to the unauthorized access, disclosure and use of
sensitive data non-public information, including information from our patient registry or other patient information, which is
protected by HIPAA, and other laws. Any such access, disclosure, or other loss of information could result in legal claims or
proceedings, liability under laws that protect the privacy of personal information, damage to our reputation and the further
development and commercialization of our product candidates could be delayed. In addition, our ability to obtain clinical
supplies of our product candidates could be disrupted if the operations of these our suppliers are affected by a man-made or
natural disaster or other business interruption. Damage or extended periods of interruption to our third-party collaborators',
including Gilead's, corporate, development or research facilities due to fire, natural disaster, power loss, communications
failure, unauthorized entry or other events could cause them to cease or delay development. We could also be subject to risks
caused by misappropriation, misuse, leakage, falsification or intentional or accidental release or loss of information maintained
in the information systems and networks of our company and our vendors, including personal information of our employees and
patients, and company and vendor confidential data. In addition, outside parties may attempt to penetrate our systems or those of
our vendors or fraudulently induce our personnel or the personnel of our vendors to disclose sensitive information in order to
gain access to our data and / or systems. We may experience threats to our data and systems, including malicious codes and
viruses, phishing and other eyber- attacks. The number and complexity of these threats continue to increase over time. If a
material breach of our information technology systems or those of our vendors occurs, the market perception of the effectiveness
of our security measures could be harmed and our reputation and credibility could be damaged. We could be required to expend
significant amounts of money and other resources to repair or replace information systems or networks. In addition, we could be
subject to regulatory actions and / or claims made by individuals and groups in private litigation involving privacy issues related
to data collection and use practices and other data privacy laws and regulations, including claims for misuse or inappropriate
disclosure of data, as well as unfair or deceptive practices. Although we develop and maintain systems and controls designed to
prevent these events from occurring, and we have a process to identify and mitigate threats, the development and maintenance
of these systems, controls and processes is costly and requires ongoing monitoring and updating as technologies change and
efforts to overcome security measures become increasingly sophisticated. Moreover, despite our efforts, the possibility of these
events occurring cannot be climinated entirely. As we outsource more of our information systems to vendors, engage in more
electronic transactions with payors and patients, and rely more on cloud-based information systems, the related security risks
will increase and we will need to expend additional resources to protect our technology and information systems. In addition,
there can be no assurance that our internal information technology systems or those of our third- party contractors, or our
consultants' efforts to implement adequate security and control measures, will be sufficient to protect us against breakdowns,
service disruption, data deterioration or loss in the event of a system malfunction, or prevent data from being stolen or corrupted
in the event of a evberattack cyber- attack, security breach, industrial espionage attacks or insider threat attacks which could
result in financial, legal, business or reputational harm. While we have implemented security measures designed to protect
against security incidents, there can be no assurance that these measures will be effective. We also take steps designed to
detect, mitigate, and remediate vulnerabilities in our information systems (such as our hardware and / or software,
including that of third parties upon which we rely). We may not, however, detect and remediate all such vulnerabilities
including on a timely basis. Further, we may experience delays in deploying remedial measures and patches designed to
address identified vulnerabilities. Vulnerabilities could be exploited and result in a security incident. We may expend
significant resources or modify our business activities to try to protect against security incidents. Additionally, certain
data privacy and security obligations may require us to implement and maintain specific security measures or industry-
standard or reasonable security measures to protect our information technology systems and sensitive data. Applicable
data privacy and security obligations may require us to notify relevant stakeholders, including affected individuals,
customers, regulators, and investors, of security incidents. Such disclosures are costly, an and emerging growth company,
and we cannot be certain if the disclosure reduced reporting requirements applicable to emerging growth companies will make
our- or common stock less attractive to investors. We are an emerging growth company, as defined in the Jumpstart Our
Business Startups Act of 2012, as amended (JOBS Act), enacted in April 2012. For as long as we continue to be an emerging
growth company, we may take advantage of exemptions from various reporting requirements that are applicable to other -- the
failure public companies that are not emerging growth companies, including not being required to comply with such the auditor
attestation-requirements of Section 404 of the Sarbanes-Oxley Act of 2002, as amended (Sarbanes-Oxley Act), as well as
reduced disclosure obligations regarding executive compensation in our periodic reports and proxy statements and exemptions
from the requirements of holding nonbinding advisory votes on executive compensation and stockholder approval of any golden
parachute payments not previously approved. We could lead be an emerging growth company for up to adverse consequences
five years following the year in which we complete our initial public offering, although circumstances could cause us to lose
that status earlier. 118 We will remain an emerging growth company until the earlier of (1) the last day of the fiscal year (a)
following the fifth anniversary of the closing of our initial public offering in April 2019, (b) in which we have total annual gross
```
